New from Borland,

Introducing *Sprint*, the fast track to performance word processing

You're on the fast track because Sprint races through your work much faster than other word processors. And you're on the fast track because you can learn Sprint in a hurry—whether you've *ever* used a word processor or *never* used a word processor.

Sprint: The Professional Word Processor!

You turn professional when you Sprint!

Ease into the future with *Sprint* today

Sprint works with today's hardware and will work with tomorrow's. Anywhere from an 8088 PC through a 386.

It's already a major success story in Europe; it's the #1 selling word processor in France (and everyone knows, 50 million Frenchmen can't be wrong!) Sprint is proof that the world *did* need another word processor.

Sprint is so sophisticated, it's simple. It won't terrify a beginner; it's a familiar face to many experienced word processor

users who can now get much better, faster results *without having to learn a new program.*

It's so flexible, businesses can standardize on Sprint without losing a thing or having to re-train.

It's so powerful that "power users" will never be hungry for power again because they can customize to their hearts' content.

And it's a remarkable value at \$199.95 instead of the \$400, \$500, \$600 some companies

want—and for a limited time only, we throw in Alternative User Interfaces compatible with the command procedures of WordStar, MultiMate, Microsoft Word, WordPerfect, SideKick and EMACS. All this for an introductory price of only \$199.95 suggested retail.

Sprint. It's the word processor you'd expect from Borland and the value you'd expect from Borland. It's time to *Sprint* on the fast track.

Section 5

SALES AND MARKETING PLAN

During the last five years our market share has increased, despite increased competition. To maintain our existing lead, we will soon be launching Omega Music's "Video 2" which is visually and technically superior to all other market entries and is priced below all but the cheapest entries. The new product will be launched at New York's World Trade Center (see page 14).

Footnote Capability

5.1 New Pricing for Video 2

Video 2 will be priced competitively. Its price will be 10% below the top selling competitors, Super Video, but slightly more than two other smaller products. Video 2 is clearly a better product than all of its competitors. The following chart summarizes competitive prices:

We took a random sampling of one hundred customers in each of our four sales regions. We then averaged the numbers to get the maximum price point (see Table 5.1). The suggested price for Video 2 is below all maximum price points.

Table 5.1 Survey Results

Region	Maximum Price Point	Margin
Northwest	\$219.95	19.95
Southwest	\$219.95	19.95
East	\$219.95	19.95
West	\$219.95	19.95

1 The prices indicated are for manufacturers' suggested retail prices of June 1, 1988.

2 The price was determined by our Market Research Group. The complete results of the poll are listed in Appendix A.

5.2 Marketing Tools

In order to maintain an increasing market share with Video 2, we need to arrange the following sales pieces/promotions:

• **New Product Collateral.** We will send new sales literature about Video 2 to all the major sales reps. The literature should include the following:

1. Identification of the new improvements. Describe Video 2 in two sentences in detail.
2. Use for the product. The recommended use and benefits of Video 2 need to be spelled out clearly. This will also be incorporated into a featured story for the Monthly Bulletin to Music Channel. Last benefits to the customer as well as a price comparison against other similar products.
3. An overview of pricing. Show how Video 2's new double track will fit neatly at the end of an aisle or as part of an existing shelf display. Dealers will be able to order the product on standard terms and receive the product for much lessening if their sales of Video 2 do not exceed their sales of the original Video 1.

• **Trial Offer.** The new improved Video 2 will be available initially as a "Take the Video 2 Test" offer.

• **New Cheap Advertising Program.** This new program will emphasize the low, relative price of the company, and the new product line.

400%

Introducing our newest family of 9-wire dot-matrix printers. The re-engineered MSP series, featuring the latest advances in print technology.

To begin with, they're 50% faster. In the draft printing mode, the MSP-40 and 45 top out at 240 cps. And the MSP-50 and 55 have a maximum cruising speed of 300 cps.

Each model features a new, bidirectional print mechanism, that can generate brilliant graphics resolution. And the new MSP-50 and 55 can produce crisp, near-letter-quality print with even better throughput.

We also made it easier to load the MSP series.

The paper bale has been replaced with a built-in convertible push or pull paper tractor. And the sleek new redesign

New.

now incorporates a rear or bottom feed. Real handy if you're printing labels, forms, cards or stationery.

As for convenience, you'll also appreciate the front panel controls, the outstanding compatibility and the wide selection of typestyles via available font cards. There's even color capability on the deluxe MSP-50 and 55.

All in all, the MSP series, with an 18-month warranty, represents an excellent value in precision-built printers. Which, considering Citizen's tradition, isn't all that new.

For the dealer nearest you, call 1-800-556-1234, Ext. 34.
In California, call 1-800-441-2345, Ext. 34.

WHAT'S INSIDE

In this issue, *PC Magazine* makes good on a promise Bill Machrone made back in February. A reader had written to suggest that we include more remarks about the concerns of scientists in our regular stories, and Machrone responded that reporting on the advanced features that serve scientists will help all readers make more-informed purchasing decisions. So we thought: Why not conclude our roundup of word processors with a look at new and better ways of working with scientific and technical material?

The 12 programs we review in "Scientific Word Processors: Formulas for Success" simplify the writing and editing of equations both mathematical and chemical—the elements that are vital to technical publishing. Anyone who has worked with the predecessors of these packages will appreciate the gains in usability and functionality within this product category. And anyone who has ever been frustrated trying to use a general-purpose WP to format an occasional equation or two may find the right secondary package among this group.

MAKING WAY FOR VGA Just as scientific word processors are achieving maturity and moving into the mainstream of desktop computing, VGA display adapters are developing the potential of making any office a room with a colorful view. In our cover story, contributing editor Winn L. Rosch reviews nine low-cost register-compatible VGA boards that take the next step

Two great communicators: PC Labs project leader Frank Mitard and contributing editor M. David Stone.

in bringing the VGA standard to PCs, XT's, and AT's. Says Rosch, "Now the glass doesn't have to be greener on the other side of the office where that other guy has a new PS/2 and VGA technology—and you don't." Rosch's point: VGA is a standard PC users no longer can afford to envy.

Finally, we look at 21 communications programs that feature powerful script languages. One of the challenges of working on this story, according to contributing editor M. David Stone and PC Labs project leader Frank Mitard, was settling on definitions for Xmodem and Ymodem protocols and their variants, which are given different names by two camps of communications experts. Says Stone, "If we simply used the protocol labels the vendors use, it would be like comparing apples and oranges and calling them peaches." After long conversations with Chuck Forsberg—the creator of Ymodem—and with software vendors, Stone and Mitard decided to adopt conventions that side with neither school. Will that end the debate or just fuel it anew? We'll let you know.

PC Magazine: The Independent Guide to IBM Standard Personal Computing (ISSN 0892-7571) is published bi-monthly except in July and August for \$26.95 for one year (12 issues), \$41.95 for two years, and \$81.95 for three years. Additional postage \$1.00 per copy or \$22.00 per year for Canada and all other foreign countries. 2485 Green Publishing Co., publisher of PC Magazine, P.O. Box 54001, Boulder, CO 80521-0001.

Everything it takes to add PostScript to your LaserJet II, including HP's blessing.

Hewlett-Packard* and QMS* have made it easy to give your LaserJet Series II[®] the desktop publishing power of the PostScript[®] page description language.

The new QMS JetScript[™]:

JetScript is the only Adobe PostScript controller upgrade authorized by HP and designed specifically for the LaserJet Series II. JetScript gives your printer the industry-standard page description language to accompany HP's PCL printer language. This expands your laser printing capabilities. Increases overall printer performance. Yet preserves HP functionality and warranties.

Do it yourself JetScript is easy to install. Just plug in two cards (one in your personal computer*, the other in your printer), connect a cable and install the software.

The result is a PostScript system with 35 resident Adobe typefaces, three megabytes of RAM, and QMS ASAP[™] (Advanced System Architecture for PostScript) proprietary technology for superior performance. All for less than half the cost of a new PostScript laser printer.

New forms of expression The speed and power of JetScript combine to give your LaserJet Series II a form of expression that's found only with PostScript.

Simply, PostScript opens up the full range of possibilities for desktop publishing. You have complete control over the final look of the page, down to the last exacting detail. PostScript allows for an infinite number of font variations and sizes. That makes PostScript's limitless flexibility and power the perfect complement to your LaserJet Series II, giving you the high-quality output you require.

Impressive results People have come to expect impressive results from QMS—one of the first companies to bring the power of PostScript to laser printing, and now with more PostScript-based products than any other company.

You'll get the same results from the new JetScript. After all, it has HP's blessing.

Laser Connection is a sales and marketing subsidiary of QMS. Call **1-800-523-2696** for the location of your nearest Laser Connection dealer.

*JetScript available for IBM PC-XT[™], IBM PC-AT[™], HP Vectra[™] and compatible personal computers, or the IBM PS/2[™] Model 50.

HOW TO CONTACT THE EDITORS

The editors of *PC Magazine* want to hear from you. Comments, questions, and, of course, compliments should be sent by letter to One Park Ave., New York, NY 10016—it's probably the best way to reach us. You can also reach us electronically via MCI Mail (our account number is 157-9301) or by leaving a note on our Interactive Reader Service when you're finished downloading the latest utility. If nothing but a human voice will satisfy you, call us at (212) 503-5255.

We are unable to look up stories from past issues, recommend products, or diagnose problems with your PC by phone. If you bought a product advertised in *PC Magazine*, are dissatisfied, and can't resolve the problem, write (do not call) Jennifer Caruso, Advertising Department, at One Park Ave. Include copies of correspondence.

PC Magazine is under no obligation to review unsolicited products. All submissions accepted for publication become the property of *PC Magazine*.

PC MAGNET

PC MagNet, an on-line service, is a source for *PC Magazine*'s utilities (both programs and source code), the PC Labs Benchmark Test programs, and an index of articles printed in the magazine. Callers can upload submissions to *PC Magazine*'s Productivity section and join forums to discuss articles printed in *PC Magazine* with the authors and other readers. *PC MagNet* provides electronic mail and a gateway to CompuServe. For more information see the Productivity section or call (212) 503-5221.

PERMISSIONS, REPRINTS

Material in this publication may not be reproduced in any form without permission. If you want to quote from an article, use *PC Magazine*'s logo in conjunction with an Editor's Choice designation, or reprint an article, call or write Jean Lammendoff, Reprints Manager, One Park Ave., New York, NY 10016, (212) 503-5448.

SUBSCRIPTION QUESTIONS

If you want to subscribe to *PC Magazine*, if you have a question about your subscription, or if you're moving, call or write: *PC Magazine*, P.O. Box 54051, Boulder, CO 80522, (303) 447-9330. A 1-year subscription (22 issues) costs \$39.97; 2 years, \$65.97. Canada and foreign add \$1 per issue or \$22.00 per year. New subscriptions and address changes take 6 to 8 weeks to process. For back issues, write Kim Armstrong, Back Issues Department, *PC Magazine*, One Park Ave., New York, NY 10016. Send \$8 per issue (check or money order, \$9 outside the U.S.).

Editorial and Business Office One Park Ave., New York, NY 10016. Beautifully Simple

Simply Beautiful

Consider this: How many Pixie menu selections does it take to create a complete bar chart – with annotation, axes, title, and legend? Just *one*.

How many menu selections are needed to change the bar values? Add to the title? Change the axis scaling? Add more bars? Would you believe... *none*.

Zenographics introduces Pixie, a new charting and drawing program with the simplest, most obvious user interface yet devised for presentation graphics.

In technical terms, it's called *direct manipulation*. To you, it means *instant learning* – and because it's so visual, Pixie is one program you'll never forget how to use.

Based on Microsoft® Windows, we think Pixie is the best example yet, in any software category, of the power of the graphical user interface.

Deep down, you know why you invest in graphics: you want to look good. You want to impress, to entertain, to inform, to *sell*.

Pixie can make you look good. Just because it's simple doesn't mean it isn't beautiful – great color, shaded backgrounds, clean typefaces, drop shadows, 3-D effects, and more.

Take a look at the slide on the left. Does it look like it could be created by a graphics amateur? In 10 minutes? With a \$195 graphics package? Thousands of Pixie users are making this very image: it's Lesson 3 (just six pages) in the Pixie manual!

Pixie is Zenographics' newest winner. It connects

beautifully with our flagship product *Mirage* – the PC-based tool of choice for graphics professionals. Through *Mirage*, Pixie gains access to the best and most complete output device drivers, and to the artistic expertise of thousands of *Mirage* power-users worldwide.

Breakthru 286-8MHz-\$395
Breakthru 286-12MHz-\$595

LIGHTNING™—FREE with Breakthru
speedup hardware—\$89.95 purchased separately

We are excited about our three speedup products. You probably know about our Lightning disk access speedup software that was awarded PC Magazine's Best of 1986 award (see box). After the smashing success of Lightning, in late '86, we

guaranteed the Breakthru 286 board to be literally the most advanced, fastest, most feature-rich board available. The runaway success it has enjoyed truly proved that assertion. Now we go ourselves one better with the Breakthru 286-12. This new board has the clock speed cranked up from 8 to 12 MHz for speeds up to 10.2 times faster than an IBM PC. It is 50% faster than an 8MHz IBM AT, and up to a whopping 1,000% faster than a regular PC.

HERE'S WHY THESE TWO BOARDS ARE SO SPECIAL.

First, they install so easily. A half-slot card means you don't even have to give up a full slot. What's more, unlike competing

products it works in the Compaq Portable and most clones. Easy diagrams show how you just place the card in an open slot, remove the original processor and connect a single cable. There is no software required. From that moment you are running faster than an AT.

Second, they are advanced. The BREAKTHRU 286 replaces the CPU of the PC or XT with an 80286 microprocessor that is faster than the one found in the AT. Has a 80287 math coprocessor slot for numeric intensive applications. A 16K cache memory provides zero-wait-access to the most recently used code and data. Speed switching software allows you to drop back to a lower speed on the fly for timing sensitive applications.

Third, you have full compatibility. All existing system RAM, hardware, and peripheral cards can be used without software modification. Our boards operate with LAN and mainframe communication products and conform to the Expanded Memory Specification (EMS). Software compatibility is virtually universal.

Faster and smarter than an AT - PCSG guarantees it.

Fourth, these are the best. There are several other boards on the speedup market. We at PCSG have compared them all, but there simply is no comparison. Many cards offer only a marginal speedup in spite of their claims and others are just poorly engineered.

We are really excited about these products. PCSG makes the unabashed statement that the BREAKTHRU 286 card represents more advanced technology than boards by Orchid, Quadram, P.C.

Technologies, Phoenix...we could go on. Breakthru 286 is undoubtedly the turbo board with the biggest bang for the buck. And we include FREE the \$89.95 acclaimed Lightning software. Call today with your credit card or COD instructions and we will ship your card the very next day.

But, no speedup board cuts disk access time in half

LIGHTNING

software can \$89.95 or FREE w/Breakthru

"Lightning is almost mandatory...." - Steve Manes, PC Magazine Best of 86 review

Loads with the DOS - always ready as a background program to accelerate disk access. You do nothing - everything is automatic. Programs that frequently access the disk (hard or floppy) are made instantly up to 2 to 4 times faster. Uses a principle greatly enhanced from mainframe technology called caching. Fully exploits Above Board memory.

LIGHTNING is the standard against which all our competition measures itself because we achieve universal compatibility with other software. Data is never lost. Order LIGHTNING separately or get it free with your Breakthru 286 board.

Think Again.

DON'T TAKE OUR WORD FOR IT. USE EITHER BREAKTHRU 286 SPEEDUP BOARD FOR 60 DAYS. IF YOU ARE NOT TOTALLY SATISFIED SIMPLY RETURN IT FOR A FULL REFUND.

CIRCLE 489 ON READER SERVICE CARD

Lucid 3-D™ is a runaway success

Don't take our word for it. Use Lucid 3-D for 60 days. Return it for a full refund if not completely satisfied. Plus, instead of the \$199 list price, an introductory spread-the-word price of \$149.

Lucid 3-D is priced to sell at \$199, but we want thousands of people using Lucid everyday, all over the world. We invite you to be a part of that group. The reason we are offering Lucid for only \$149, on a sixty day return for a full refund, is simple. Preliminary user testing of the product produces the same results over and over. People tell us they would never work without Lucid 3-D again. Even folks continuing to work with i-2-3.

Memory Resident

That's because the idea of a memory resident spreadsheet makes sense, one that you can pop-up instantly while working in your word

way we dreamed a spreadsheet would function. Everyone who has seen it says things like, "Lucid 3-D is how software of the 1990's will look and perform", or even more to the point "This is the way I thought a computer should work". You'll see. Lucid is exciting.

way. Users say "It is so intuitive that I really don't need a manual." That's because we use something we call a visual command menu. Jim Seymour, the noted PC columnist, talking about Lucid in a recent article said that, "If there ever was an interface idea so good it ought to be stolen and widely used, this is it."

What he was talking about is a new menu approach that follows a simple design concept: it is easier to recog-

FIG. 2 Here we are. Instantly. Notice the lower left corner showing we are on level 2. You can go down or up. (See next page)

processor or any other program. Lucid lets you cut anything on the screen and paste it right into Lucid, or cut anything from a Lucid worksheet and paste into the application below. You can even run Lucid on top of i-2-3 if you like, and cut and paste information from one to the other, including formulas.

Lucid 3-D was developed over the past two years with countless, exhaustive hours of planning and programming to produce something spectacular. This is a product that works the

multi-dimensional. Any cell of the spreadsheet can contain a complete other spreadsheet that you can access with a single keystroke. It is as simple as the pictures show. And you don't have to write formulas to do that. All you do is go look at the other file, navigating through easy, point and shoot directories. When you come back up (with one key) the link is made automatically for you.

Everything about Lucid works that

FIG. 1 Let's get the detail on those ad costs. Just move the window to that cell and press one key (grey +).

What Makes it so Special

In the screen examples you can see Lucid is really

simple than it is to remember. As choices are made on a menu that take you to lower levels you always can see exactly where you came from and where you are going. The complete menu path is always visible. You cannot get lost several levels down. This means you never have to remember a command, you just flow right to it.

Any cell can contain a complete other spreadsheet that you can access with a single key.

Plus, no matter where you are on a menu or what you are doing, just press function key F1, and you will get a help screen specific to that command or action. Or if you want to know about any subject you can pop up an index of over 400 topics and select the one you want.

Notepad Behind Every Cell

Another 3-D feature is that any cell can also contain a multiple page note that you instantly access with a single keystroke. You can write

FIG. 4. Now, instantly we are on level 3. Each level is a different spreadsheet. You could now move to the New York Times and see the detail on that figure. There is no limit to the levels you can go. Move right down to transaction level if you like.

notes, memos or letters that relate to your work, save them as individual files and even print them separately or with your spreadsheet.

Speed

Lucid 3-D is truly revolutionary. It is fast, fast, fast! It is incredibly quick in performing calculations because it doesn't recalculate every cell every time you insert an entry. Instead, it only recalculates the specific cells that are affected by your change. This is called minimal recalc. Lucid also has a remarkable innovation called background recalc in which you are given control of the cursor the moment calculations affecting your viewing screen are completed. Other calculations you don't see continue on in the background during the next commands. The end result of this powerful combination is you rarely wait for a recalculation with Lucid. You find out what instantaneous is all about.

Lucid Learns

Lucid 3-D also lets you teach it any

FIG. 3 We want more detail, so let's go to Newspapers. Just press the Grey + Key

“The best idea I’ve seen for a spreadsheet in years.”

Jim Seymour, Columnist, PC Magazine, PC Week

Fig. 5. Of course, Lucid does multiple windows. Notice, you can simultaneously open windows in different directories, different drives, even down as many as 3-D levels as you like. No one else can do that.

Mouseability

Lucid 3-D was designed for both keyboard enthusiasts and mouse lovers alike. You can take your pick. Designed around the mouse from the ground up, the interface is smooth and natural. You select files to load from directory lists. Everything is point and click. What's more, any Lucid 3-D menu selection can be "moused" and the response time is "right now" instead of the sluggish "a little bit behind you" feel of add-on mouse menu systems like those you've seen with 1-2-3.

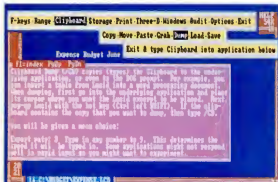

FIG. 6 We need those budget figures in the Word Perfect letter we are writing. Clipboard Dump does it right now.

A window pops up with a library of function names you can page through with the mouse. Select, click and it's in the formula with no typing required. You even have a label window that you can fill (from the keyboard) with favorite labels and names so that you can insert them later with the mouse. There's even a pop-up calculator to insert numbers so you don't have to go to the keyboard very often.

It really permits that feeling of becoming one with your work. Lucid 3-D has windows of user defined range names as well as the macros named by the user that can be selected just by pointing and clicking. Icons that are easy to grab with the mouse let you resize and move the spreadsheet window with the ease you would expect. Plus you can go anywhere on the sheet by moving the mouse and clicking on the spreadsheet borders. And remember Lucid is designed so that any of those features are done with or without the mouse easily and quickly.

Audit

When you are staking a big decision on information gained from a spreadsheet you need to be certain that you have made no mistakes. Lucid offers five audit displays and printouts.

Masterwork

We could go on at great length about all the features and innovations in Lucid, but Lucid is more than a bag of features. What is most important is the pride and craftsmanship that went into its creation. It is a master-

FIG. 7 Here it is right in Word Perfect (or any word processor) just like you typed it. You can go the other way just as easily.

Makers of **LIGHTNING**
disk speed up software, and
BREAKthru 286 Accelerator Board.

Spread-The-News Offer
\$149 Introductory Offer (List \$199)
Full Refund within 60 days,
if you aren't ecstatic

Magazine Award for Technical
Excellence
The other winner: Microsoft's Excel

Call 1-800-544-4699

work. The overall feel is tight and polished. In fact, Paul Somerson, executive editor of PC Magazine, used one word to describe it, "Slick".

PCSG has built a reputation as a development laboratory producing products that you know are excellent. In 1983 PCSG dominated the Model 100 laptop market with ROM based software that every reviewer rated as excellent. In 1985 we produced **LIGHTNING** the pioneer and award winning Disk speed up software. In 1986 we developed the **BREAKthru 286** accelerator board that blew everything else out of the water, and later we topped ourselves with the Breakthru 12. Now in 1987 those who have worked with Lucid 3-D tell us "you have done it again. This is software everyone should have."

Even if you don't plan to abandon 1-2-3, Lucid makes sense. Files are converted between them with ease so there's not an interoffice compatibility problem. This means you can have the power and fun of Lucid 3-D without having to upset your present systems.

We are excited about Lucid 3-D. But don't take our word for it, take us up on our 60 day offer. Call us on our order line number and we will ship your order the very next day. This \$149 offer will end as soon as our dealer network is fully stocked. But in the mean time we invite you to try Lucid as part of our "spread the news" campaign. Just pick up the phone and call us. We accept all major credit cards or you can order COD.

Exceptional spreadsheet for the IBM PC, PS and Compatibles.

The error correcting modem that ensures safe passage for your data—no matter where it's traveling.

The Ven-Tel 2400-33 lets you choose between the two standard error correction protocols (X.PC and MNP) at the touch of a key. So you'll have error free connections with over 350,000 MNP modems *and* with major public data networks using X.PC—like Tymnet, MCI, Western Union and GE Geisco.

And the 2400-33 not only protects your data, it's faster than *any* non-error corrected modem. MNP Level 5 data compression can double your throughput up to 4800 bps—and higher speeds mean reduced phone

charges and less time spent transmitting.

So whether you're sending files, downloading expensive data from an information service or managing your personal portfolio, you'll know that your critical data is 100% correct.

The Ven-Tel 2400-33. The only modem that guarantees your data a flawless trip... no matter where it's traveling.

Ven-Tel

LETTERS TO PC MAGAZINE

OFF-KEY AND OUT OF TUNE

Your article on relational databases ("Relational Databases: Taking the Middle Ground," *PC Magazine*, April 26, 1988) has left me aghast. Your Editor's Choice, *PowerBase*, gets the nod with no sort facility?

Everything we do at the Virginia Living Museum (keeping track of donors, members, and so on) is sorted by ZIP code, last name, or other criteria. I fail to understand how you could have been so unattuned to what most of us do with the files in our databases.

James R. Rollings III
Director of Development
Virginia Living Museum
Newport News, Virginia

Mr. Rollings is apparently unattuned to the risks of sorting. Programs that accomplish sorts by physically swapping records can compromise data integrity if your system goes down during the sort. The more elegant approach to reordering your records—the one that PowerBase takes—is indexing. Using this feature, PowerBase completed the PC Labs sort tests with no trouble at all (see the April 26, 1988, issue, page 174).—Ed.

NUTS OVER NUTSHELL

Mike Falkner's favorable review of *Nutshell Plus* ("Relational Databases: Taking the Middle Ground," *PC Magazine*, April 26, 1988) nicely summarized the program's features, but the reviewer missed an important point. *Nutshell Plus* places no limits on text field size. For those of us

who store, sort, and retrieve lengthy descriptive or historical notes and similar text-laden records, that feature is indispensable. As a satisfied user of the program, I was disappointed you had not pointed out *Nutshell Plus*'s unusual, almost unique talents in this regard.

Marvin Brieness
Woodland, California

UTILITY TO THE RESCUE!

I just want to thank you for the software on your utilities disk. I have put several of these programs to good use. In fact, LPTPORT.COM solved a major problem for me when I could not get one of my programs to print properly.

Although I had a second parallel printer port available on my Intel AboveBoard card, I could not figure out how to address it as LPT1, which is the only port this program can use. LPTPORT to the rescue! I switched my printer cable to the AboveBoard parallel outlet and loaded LPTPORT.COM in the AUTOEXEC.BAT file, and everything worked! Your program saved me many dollars and hours of headaches.

James E. Reid
Haverhill, Massachusetts

SIFTING THROUGH SEXISM

With all the documented evidence concerning the destructive effects of sexist language, it is hard to believe that a publication as evolved as yours still indulges in its use. Yet every month, blended in with your well-researched articles, priceless reviews, and sharp commentary are countless sexist terms and pronouns—almost all of which could be easily rectified.

A new editorial policy in this area could help the finest Independent Guide to IBM-

Standard Personal Computing stop contributing to this pervasive form of sexism!

William Detjen
Winooski, Vermont

IBM: ITS OWN WORST ENEMY

I agree 100 percent with Robert L. Hummel's definition in his PC Tutor column on OS/2 (*PC Magazine*, April 12, 1988). The number-one problem that plagues the IBM PC world is—IBM!

Sadly, IBM doesn't see it that way and will likely ignore your suggestions.

Derek Hamilton
Toronto, Ontario
Canada

SPEED LIMITS

I was pleased with the open-mindedness Winn L. Rosch exhibited in his review "IBM's PS/2 Model 80-111: A Dream Deferred," *PC Magazine*, April 26, 1988). It was refreshing to see that speed, power, and speed were not his only considerations. I cannot think of any one computer that is better in every way than another. When any two computers are compared head-to-head, there will always be some little area where even a heavy underdog will excel.

Jack E. McCoy
Deep Run, North Carolina

It was with great interest that I read your article "IBM's PS/2 Model 80-111: A Dream Deferred." I wasn't surprised to once again see unfair criticism of IBM for not blazing the trail in speed.

IBM has never tried to "push the envelope" of computing power by running processors at speeds greater than they were designed for, or by using hard disks with access times faster than drives that had 2 to 3 years of reliability data under their belt, or by implementing major changes that enhanced speed while jeopardizing future compatibility.

I have to wonder what you're going to tell your readers if future developments should prove IBM's decision to be ingenious. The majority will have purchased Compaq 386 computers for their downward compatibility instead of the IBM 386 for its future potential.

James B. Stack
Whitefish, Montana

DEAD LOBSTER REINCARNATION

In Bill Machrone's column "Tough Times at the Market" (*PC Magazine*, April 26, 1988), he wonders, "What do you do with those dead lobsters at the bottom of the tank, the 8088-based machines?"

A possible solution would be to donate those "lobsters" to a charitable organization. I'm sure that either the organization itself or the people it supports could use a spare computer or two (even if it is quasi-obsolete).

Or you could try giving the computers to community schools. Of course, the donation should be tax deductible. In any case, it's a win-win solution.

David A. Lessnau
Fairfax, Virginia

A SIMPLE CHOICE

It was great to see *Q-Pro 4* get a fair review by someone who recognized it for what it is: a powerful programmers' programming language ("Programmable Databases: dBASE and Its Challengers," *PC Magazine*, May 17, 1988).

However, it seems unfair to compare *Q-Pro 4* with *dBASE III* or *R-base*, because like COBOL, BASIC, and *C*, *Q-Pro 4* is a programmers' language. Q-N-E International used to be known as Quick and Easy, and *Q-Pro 4* users referred to the language as Quick and Easy. Why anyone would want to write and develop in *C* when they can work in *Q-Pro 4*, translate the programs directly into *C*, and then compile them is inconceivable. Next time

you review programming languages, try stacking them up against *Q-Pro 4* coupled with QE and Q2C, and think about which offers software developers the real choices.

Solutions Software
Cherry Hill, New Jersey

VIDEO VENGEANCE

The What's Inside column in the April 26, 1988, issue told of the heroic efforts of your author Mike Falkner, who used his camcorder to capture a momentous screen event on film. I would like to point out to you that camcorders, like all video cameras, record their images on videotape. Anyone who has ever tried loading his film into a camcorder could probably explain this to you.

Oh well, maybe some video magazine has a Communiqués column I can send that article to.

J. C. Turner
Cedar Falls, Iowa

THE TORTOISE AND THE HARE

As Jim Seymour alluded in the sidebar "The Quest for the Least Computer"

("Planes, Trains, and Automobiles: 12 Portables for the Road," *PC Magazine*, March 29, 1988), the Toshiba T1000 may be a little slower than some, but it offers mouth-watering practicality and functionality, especially when combined with *Framework II* in hard RAM. I have found the resultant 6½ pounds of computing power simply and truly unbeatable! And I've been looking for a long time . . .

Where We Stand On Accounting.

Eight years into it and firmly planted.

With our experience and knowledge we have created a new foundation for over 70,000 businesses worldwide.

And now, you might say we wear a bigger pair of shoes. Because we write accounting software that's more than just a tool for accountants. Our Database Accounting Library™ is designed from the ground up to run an *entire* business.

A system that everyone in a business can use, on just about every computer or network. It's written in dBASE: The most accepted business programming language in the industry. Providing the power and flexibility that enables your information to achieve its maximum potential.

A financial system should grow as your business grows and be able to fit the specific needs of that business. No matter what type of business you're in. The Database Accounting Library includes the source code that allows you to do just that. And we back it up with an unprecedented five-year warranty.

It's all designed to put your company on a much firmer footing.

You see at SBT, we stand for more than accounting.

We stand for better business.

CIRCLE 470 ON READER SERVICE CARD

Every Major Hardware and Software Manufacturer That Offers Remote Support, Uses Close-Up!

Join the Leaders

Software and Hardware manufacturers such as Ashton-Tate, Borland, IBM, and Lotus use Close-Up to provide support to their corporate accounts.

For example, our agreement with IBM covers over 100,000 copies of Close-Up to be used by their Support Centers. Close-Up lets IBM support personnel use a PC to dial a customer's PC which can be connected to their mini or mainframe. Once connected, screens and keyboards are linked as one. The customer and IBM can diagnose problems in a "real-time" environment. Instantly, and without travelling.

MIS managers in Fortune 500 corporations like Merrill Lynch use Close-Up to support the entire company from one location. Kwik Kopy and PIP use Close-Up to support and train franchisees. Computerland and Entree chose Close-Up for its ease-of-use in supporting their customers.

Close-Up lets you work with your customers, access their DOS, run their programs and work on their files, all remotely!

Close-Up does More . . . Remote Order Entry

Novell's entire North American order entry system is based on Close-Up. Their network centers and regional offices call into any one of the central office's 45 workstations running Close-Up. The remote offices become part of Novell's order entry network as though they were actually there. They have file server access at full network speeds, 24-hours a day. And using Close-Up's remote print feature, reports are printed remotely at the regional sites.

Point of Sale

Softsel, the largest worldwide software distributor, uses Close-Up exclusively in their new Dial-Up SalesNet order entry/inventory system. Close-Up's error corrected keystrokes and screens ensure that orders are entered accurately. Dealers throughout the country check current inventory levels, review product price descriptions and enter orders, all remotely!

Close-Up Lets Your Computer Do Two Things at Once

With Close-Up you connect and exchange information PC to PC, or PC to mainframe. Close-Up automatically dials, redials and logs on to information services such as Dow Jones, CompuServe, The Source, and Lexis. Or sends and retrieves telexes. And even picks up your electronic mail from services like MCI or Telenet's Telemail.

And if that's not enough, Close-Up will do all of that in the background, while you continue working on your word processor, spreadsheet or applications program in the foreground.

Close-Up Works at Night, So You Don't Have To!

Close-Up automates your routine jobs. Any time, day or night. This includes sending and fetching files. Entering keystrokes into a remote computer. As well as running and interacting with programs remotely. All this, without anyone being at either end. Imagine you have 25 offices around the country. At night,

from the home office, Close-Up will call all 25 remote offices. Fetching the daily inventory or sales information.

Back at the home office, Close-Up runs the inventory spreadsheet with a macro that consolidates the information.

Then Close-Up sends the consolidated inventory to all 25 offices. Even printing it out at the remote locations, so the office managers have consolidated reports on their desks when they arrive in the morning.

And, of course, Close-Up keeps a detailed log of all it accomplished while you sleep!

Close-Up: The complete communications system chosen by the leaders:

- Remote Support.
- Remote Order Entry.
- Home to Office Communications.
- PC to PC Communications.
- PC to Mini or Mainframe.
- PC to Information, Telex, & Electronic Mail Services.
- Automated Communications.
- Gateway to LANs.

Close-Up meets all your communications needs. When you want communications, say Close-Up.

Call now! 805/964-6767

■ LETTERS

point of view. Winn L. Rosch seemed unaware of (or uninterested in) the accompanying benchmark-test comparisons, leaving me somewhat confused about the exact meaning of the results.

The benchmark tests compared the three PC turbo boards with an IBM PC AT rather than with a PC-XT, which was the computer being upgraded. The benchmark tests and discussion also overlooked the existence of high-speed 286 turbo boards, which might have favorable ratios of cost per additional megahertz of speed (and which also run OS/2 now).

The statement that the Inboard 386/PC is limited to "about 80 percent of the calculating throughput" of the 16-MHz Compuq is confusing. Does this mean an effective rating of 12.5 MHz?

The rather important issue of EMS support was only briefly mentioned because of a quirk in the Quad386XT. Lastly, the fact files and review were not sufficiently specific regarding the potentially expensive details such as how much memory is supplied, whether unpopulated boards are available, and the cost of additional cables or any of the other accessories that may be needed.

Al Field
San Diego, California

Actually, features, not performance, distinguish 80386 turbo boards from 80286 products in unenhanced computers. As noted in the story, the additional operating modes and improved memory handling of the 80386 make it the best choice for multitasking.

Throughput and not megahertz is the major issue with the turbos because they are limited in I/O performance by the slow PC bus. Benchmark-test numbers alone will not reveal this shortcoming, a point addressed in the story proper.

—Winn L. Rosch

In Winn L. Rosch's article "The Transformers: 386-based Turbo Boards for XT," he states that "the Inboard is in-

compatible with early model PCs with 64K system board RAM."

I own an Intel Inboard 386/PC, and it is functioning properly in my IBM 64K PC. What may have been overlooked is that the successful installation of the Inboard in the older PCs may require the upgraded ROM BIOS that was offered by IBM several years ago.

Overall, I am impressed with how well the Inboard 386 works and how easily it was installed in my PC.

Peter M. Hayes
Durham, Connecticut

Mr. Hayes is correct that the 80386 turbos may work in early PCs, providing that the computers have been upgraded with a new BIOS ROM. Because the upgrade ROM is no longer available from IBM, the turbo manufacturers themselves classify their products as incompatible with early PCs. In other words, when these products are combined, bugs and other problems may appear for which the manufacturer assumes no responsibility.—Winn L. Rosch

CORRECTIONS/AMPLIFICATIONS

God Speed (After Hours, PC Magazine, March 29, 1988) is distributed by Paraclete Software, 1000 E. 14th St., #425, Plano, TX 75074. We incorrectly stated that it was distributed by Kingdom Age Software.

Archive-Link and VsCom (PC Advisor, PC Magazine, February 29, 1988) are developed, produced, and marketed by M/H Group, 222 W. Adams St., Chicago, IL 60606, not by General Information Systems, as we reported.

In our review of Congressional Toolkit from BJ Toolkit (After Hours, PC Magazine, May 31, 1988), we incorrectly reported the company's telephone number. The correct number is (914) 271-8271.

HOW TO WRITE TO PC MAGAZINE

Send your letters to PC Magazine, One Park Avenue, New York, NY 10016, or through PC MagNet (see page 4 for access information). All letters become the property of PC Magazine and are subject to editing.

ISYS

ACCOUNTING SOFTWARE

Resellers, Consultants, VARS:

Imagine being able to offer one business management software system ideal for every client. A system so flexible and powerful that it allows your clients the opportunity to design their system the way they currently do business. A system so simple for them to use that you will be freed from those never ending support calls. A completely integrated system and all for under \$1000! If only there was such a system. There is. We call it ISYS.

Become a member of the ISYS Dealer network and begin receiving increased business, special pricing, solution-oriented support, innovative marketing, and more. Don't miss out on this opportunity, give us a call today! *Single user

MODULES AND FEATURES:

GENERAL LEDGER

- Multi-company multi-level accounts
- 255 user defined financial reports

ACCOUNTS RECEIVABLE

- Unlimited # of customers
- Open invoice and/or invoice balance fwd
- Unapplied pmts/multi-company A/R
- Multiple pricing codes
- Credit limits, collection status and payment discounts
- Supports partial payments and finance charges

ORDER ENTRY

- Produces shipping labels for invoices
- Service and product-oriented business
- Non-invoice handles shipping and labor taxable/non-taxable items on same invoice
- Multiple (user-defined) sales tax tables
- Prints packing slips & sales journals
- Customized text on user-designed invoices

INVENTORY

- LIFO, FIFO, weighted average, and standard cost supported
- Allows up to 4 places for units, cost, and price

ACCOUNTS PAYABLE

- Unlimited # of accounts
- Post to 200 G/L expense acct per invoice
- Automatically calculates Inv & G/L
- Supports pre-paid expenses & future liabilities

PAYROLL

- Automatically posts to G/L, A/R & A/P
- Benefits and deductions are calculated on fixed amounts, hourly amounts, percentage of gross, or variable amounts
- Allows additions to gross: taxable, non-taxable, or partially taxed — 6013 plan
- Handles sick leave & vacations
- Tax tables easily updated by user

ACCOUNT NET (Multi-User)

- Upgrades system to network environment
- Network supported: Novell, 3Com, 10Net, LANLink, and others supporting NetWare

LINCS (DATA INTERFACE)

- Allows transfer of data from the accounting system to an ASCII file which can then be imported by other software such as spreadsheets or database systems. This module can also import data into the accounting system from ASCII files generated by any other software system.

CURRENT VERSIONS:

- English, Spanish

SYSTEM FEATURES:

- Cannot post out of the 18 period fiscal year, double-post even if interrupted. All modules run either stand-alone or integrated. 15 alpha-numeric characters for G/L accounts, vendors, customers, stock & employees.

PC AT-286/12

\$949

12 MHz, Zero Wait State, SI 15.3 LANDMARK™ Speed 16 MHz.

512K, 1.2MB Drive w/combo Controller, 101-keyboard:

- 512K RAM Standard. Accommodates up to 4MB of RAM on Motherboard using 100NS, 1MB DRAM's
- 1.2 MB Floppy Drive.
- Combination Hard Drive/Floppy Controller
- 180 Watt Power Supply.
- Enhanced 101-Key AT-Style Keyboard
- OS/2™ compatible today
- 100% IBM, MS/DOS, OS/2, XENIX, Novell, 3COM, and PCNET LAN compatible
- Memory above 640K can be configured either EMS/Expanded, or Extended, by motherboard switch setting
- 8 Slots (six are 16 bit). Clock/Calendar on board.
- AT-Style Case with Keylock, Turbo, Power and Hard Drive LEDs. Small footprint case can accommodate up to four half-height mass storage devices.

MONO - System above with 12" Mono Monitor & Hercules compatible Graphics Card with Printer Port.....**\$1059**
EGA - Base configuration with EGA card and Enhanced Graphics Display**\$1384**

Memory above 640K can be extended or expanded.

Memory support for 1 MB or 256K DRAM's, up to 4MB on board.

6 chips implement full AT functionality.

Very low power consumption.

YOU GET THE MOST ADVANCED 286 MOTHERBOARD EVER DESIGNED

Your advanced PC AT-286 /12 Motherboard uses just 6 VLSI chips to replace the functionality of over 120 chips. First 286 designed from scratch for stable and reliable 12 MHz performance.

PC V20 AD-II

\$575

15 MHz, in an XT machine. Complete with Monographics Card & Monitor.
 512K, One Drive, Mono Card & Monitor, 84 keyboard:

PC1001

The Best Warranty in the Business.

PC Brand customers expect the best...and they get it. You'll enjoy our exclusive 5-Year Warranty on all systems hardware and peripheral cards. Other companies ask you to settle for 1-year. We give you *five* long years of protection...automatically!

A Word to the Wise About Buying PC Clones:

Be careful. *Know* what you're getting before you buy. You'll find ads offering you "base configurations" without RAM. Without drives or controllers. Some without a keyboard for heavensakes! Why? Because they are trying to attract you with *artificially low prices*. Don't be a victim. Be wise and shop with confidence with PC Brand.

All PC Brand configurations come to you fully-functional. In top working condition. We burn-in every board for 48 hours. Every system for 72 hrs. We do *not* inflate freight charges and we do *not* charge you credit card surcharges (as others do). We simply treat you right...with honesty, integrity, and service you can depend on. It's worked for our customers. It's worked for us (for over five years now). And we'd be delighted to make it work for you. Call PC Brand today!

THE BEST

bedford® integrated accounting system

GENERAL LEDGER • PAYROLL
ACCOUNTS RECEIVABLE
ACCOUNTS PAYABLE
INVENTORY • JOB COST
ALL FOR \$249

PC MAGAZINE'S EDITOR'S CHOICE: In its review of 59 accounting packages conducted by Price Waterhouse, "This is truly a (complete accounting) system. Bedford's six modules... are easy to install, easy to use, and so well integrated with one another that it makes accounting a snap — even for nonaccountants."

INFOWORLD judged Bedford as 'superb' and selected it as one of the top products of 1987.

The BEDFORD INTEGRATED ACCOUNTING SYSTEM is simply the best small business accounting system available. The User's Guide is superb... and, if you know nothing about accounting or bookkeeping, the BEDFORD ACCOUNTING MANUAL offers a clear, concise tutorial to get you started instantly... right out of the box.

The BEDFORD INTEGRATED ACCOUNTING system is truly remarkable. It's extremely fast, versatile, and Lotus compatible. Automatic posting assures that all balances are up to date. The screens (full color or monochrome) are easy to follow and specially designed to increase productivity. Password protection eliminates unauthorized access to your records. Low cost tractor fed checks, invoices and statements are available. THE BEDFORD INTEGRATED ACCOUNTING SYSTEM IS NOT COPY PROTECTED.

GENERAL LEDGER

- user can define chart of accounts
- entries can be applied to prior periods within the current fiscal year
- immediate reports for any date or period produced on screen or printer including balance sheet, income statement, trial balance, chart of accounts and all journals
- automatically posts from receivables, payables, inventory and payroll so all statements are always current
- automatically displays account descriptions and numbers on screen
- distribute journal entries into multiple revenue or expense accounts, projects, profit centers or departments
- produces full audit trails
- zero balance accounts can be suppressed in reports

PAYROLL

- supports manual or computer produced checks
- automatically calculates all federal and state taxes, unemployment and disability insurance
- supports local taxes
- automatically posts payroll expenses to General Ledger and Jobcost
- allows seven income fields including pay advance and tip fields
- deducts for taxable benefits
- automatically retains QTD and YTD employee earnings, deductions and associated payroll expenses
- accumulates 940, 941, W-2 and state tax information
- produces immediate employee reports on screen or printer including W-2 forms, employee mailing labels, payroll journals, QTD and YTD reports of earnings & deductions, and employee record reports.

ACCOUNTS RECEIVABLE

- uses open invoice method to keep track of full or partial payments against any customer invoices
- fully paid invoice may be purged or retained
- automatically updates inventory and ledger accounts, and project records
- user can define aging periods
- reports produced on screen or printer including mailing labels, aged summary, aged detail and receivables journal
- automatically displays customer names and numbers on screen when required for program input
- prints computerized invoices or supports manual invoicing
- prints computerized customer statements with remittance stubs

ACCOUNTS PAYABLE

- uses open invoice method to keep track of full or partial payments against any supplier invoice
- fully paid invoices may be purged or retained
- automatically updates inventory records, project records and ledger accounts
- user can define aging periods
- produces immediate vendor reports on screen or printer including mailing labels, aged summary and details, and payables journal
- automatically displays vendor names and numbers on screen when required for program input
- prints computerized checks or supports entry of manual checks

INVENTORY

- suitable for manufacturers and wholesalers
- handles state sales taxes
- updates from receivables and payables
- uses weighted average cost method
- handles adjustments and transfers
- automatically flags reorder levels
- reports can be displayed, printed or exported
- expresses selling and cost price to three decimals

JOB COST

- any revenue or expense transaction can be allocated to profit centers, divisions or projects
- paycheck expenses include the company's FICA, PUTA, SUTA and State Disability insurance expenses
- handles up to 999 active projects at any one time
- produces reports on screen or printer including summary and detail reports on revenue and expenses for any project or departments

BEDFORD'S INTEGRATED ACCOUNTING SYSTEM NOT COPY PROTECTED

■ MITT JONES

PC ADVISOR

A low-cost way to liberate your monitor and keyboard from your system unit, and two products that reeducate the HP LaserJet Series II.

FROM A DISTANCE

I could make much better use of my limited workspace if I could move my system chassis to a cabinet top behind my desk and keep my keyboard and monitor on my desk. This would require that I route the monitor and keyboard cables some 20 feet, however. Any ideas?

Mauro Maschio
West Orange, New Jersey

As you've no doubt learned, moving your keyboard and monitor away from your system unit calls for a bit more than picking up a couple of extension cables. Signal degradation makes simple extension cables impracticable.

The Extender (Cybex Corp., 2800-H Bob Wallace Ave., Huntsville, AL 35805; (205) 534-0011) gets around the problem by boosting the TTL signals before they pass through the cable. Small metal boxes at each end of a 3/8-inch-diameter cable condition the signal and provide the hook-ups to your system, monitor, and keyboard.

The price of the Cybex kits varies, depending on the length of cable you need and the type of display you use. The Extender 1, which works only with monochrome systems, ranges from \$120 for a 25-foot kit to \$340 for a 250-foot kit. The Extender 2 works with monochrome, CGA, or EGA signals; it lists at \$135 for a 25-foot kit and \$245 for a 150-foot kit.

Cybex recently began shipping the Companion, a similar product that adds extra keyboard and monitor connectors at the system end. This allows you to hook

two keyboards and monitors to your system—one close to the system chassis and one at a remote location. Prices start at \$219 for an MDA/CGA/EGA-compatible 25-foot kit.

SERIES II POSTSCRIPT

I am in the market for a PostScript laser printer. I've heard that there is a product that gives the HP LaserJet Series II PostScript capability. Does such a product really exist? If so, how would such a combination compare with a straight PostScript printer?

Joan Brainard
St. Paul, Minnesota

The product is the QMS JetScript (\$2,495; The Laser Connection, P.O. Box 850296, Mobile, AL 36685). JetScript is a full-length adapter you install in your system and a small board that installs in the option slot of the LaserJet Series II.

The adapter board furnishes the Adobe Systems PostScript interpreter, 3MB RAM, and a Motorola 68000 processor running at a speedy 16 MHz. The duo—JetScript plus the Series II—actually outperforms most standalone PostScript printers, thanks to the fast processing and the high-speed data transfer the adapter allows.

You also retain ability to use your LaserJet Series II in its native mode. The JetScript system provides a new hookup between your PC and printer, but it also allows you to maintain the standard parallel port connection. If you send output through that standard connection, your Series II functions as itself. Route output through the JetScript connection and the Series II functions as a PostScript printer.

By the time you add the \$2,595 list price of the Series II to the cost of JetScript, you're in the price range you'd expect for a standalone PostScript printer. But the high-performance PostScript ability and the versatility of having two printers in one makes JetScript a smart buy.

Imagen Corp. (2650 San Thomas Expwy., Santa Clara, CA 95051; (408) 986-9400) recently announced a similar product—PC Publisher Kit—which should be shipping by the time this issue hits the newsstands. This \$1,995 kit installs in the same way as JetScript. JetScript and PC Publisher Kit differ in other regards, however. Whereas JetScript includes a licensed Adobe PostScript interpreter, Imagen ships its own version of a PostScript-compatible interpreter with the PC Publisher Kit.

■ The Companion allows you to hook two keyboards and monitors to your system—one close to the system chassis and one at a remote location.

■ PC ADVISOR

The PC Publisher Kit also allows the Series II to handle another page description language, Imagen's Document Description Language (DDL), and emulate a wide range of printers. Printer emulations are provided for the Epson FX and MX-80; the Diablo 630; the IBM Graphics Printer; the NEC 3550, 5510, and 7710; and the Qume Sprint 5.

We had not yet received a PC Publisher Kit for evaluation when this issue went to press. Keep your eyes on First Looks for a hands-on review.

COMPAQ KEYBOARD

I recently bought a Compaq Deskpro/286 and I am very happy with the machine except for the mushy keyboard. Does any manufacturer produce an adapter that allows the IBM Enhanced keyboard to work on a Deskpro?

Dave House
Linden, New Jersey

The IBM Enhanced keyboard should work fine with your Deskpro, without an adapter. Your real problem will be finding a spare IBM keyboard. IBM doesn't sell its keyboards separately. Unless you manage to talk someone into swapping an IBM keyboard for a Compaq, your best bet is to find a third-party keyboard you can live with.

Personal preference rules when you are shopping for a keyboard. People seldom agree on which keyboard feels the best. Try to test as many keyboards as possible for yourself before you spend your hard-earned money.

Many IBM keyboard lovers have settled on Northgate Computer Systems' C/T 101 keyboard (2905 Northwest Blvd., #250, Plymouth, MN 55441; (612) 553-0631) as having the closest thing to a true IBM feel. At \$99, the C/T 101 provides an IBM-like, clicky feel. The key resistance is noticeably lower than with an IBM, however.

DIALING UP AT&T

AT&T has long offered a toll-free technical support line ((800) 922-0354). Now AT&T's National Systems Support Center has started a bulletin board—a boon for you AT&T 6300 users who are grappling with AT&T-specific problems. The bulletin board includes informative notices that you can either scan on-line or download to read at your leisure. You can also leave messages.

The two access numbers are (201) 769-6397 and (201) 769-5616. Have your AT&T 6300 CPU serial number close at hand when you call: you'll need it for a membership questionnaire you must complete before you're granted access to the conferences.

ASK THE ADVISOR

Send your questions to PC Advisor, PC Magazine, One Park Avenue, New York, NY 10016.

WE'VE BUILT A BETTER BROOKLYN BRIDGE WITH VERSION 2.0!

Why Is Our Bridge Better? Because The Brooklyn Bridge® that John Dvorak, PC Magazine, chose as "The Best of the Best Utilities,"* now gives you more choices!

The Brooklyn Bridge Version 2.0 is more flexible than ever! We've always been the leading file transfer and access utility between IBM compatible microcomputers with any size floppy or hard disks. Now we give our customers a choice between our file manager for the novice user or DOS commands for the more experienced user.

Our new file manager lets you view both local and remote files at one time using a full-screen, dual-directory display with 1-2-3 style menus. Or, you can still transfer files and access peripherals using DOS commands at the command line, within an application, or within your current menu system.

One Printer Can Now Work For Two People!

In addition to our menu system, The Brooklyn Bridge lets you share printers and gives them access to other peripheral devices like tape back-up systems.

Don't Tie Up Your Computer Sorting A Database! RUN Gives You Twice The Power!

Our exclusive Brooklyn Bridge feature, RUN, provides for dual independent processing which lets you use both the remote and slave computers at one time.

Our DOS Utilities Guarantee Easier DOS Processing!

BACKUP, MOVE, REMOVE and COPY save time by allowing you to work with multiple files at one time.

BACKUP saves time by updating your disks quickly and backing up only files that have been changed or created since the last time your

disk was backed up.

MOVE lets you work twice as fast by automatically deleting the original once a file has been moved.

If confidentiality is crucial, REMOVE has a security option to insure that deleted files are unrecoverable.

Now you know we have built a better Brooklyn Bridge, while still using the fastest attainable serial transfer rate at 115,200 baud, and still saving your customers money by eliminating the expense of an additional external drive.

The Brooklyn Bridge is available through your local dealer or directly from White Crane Systems, Inc. For more information please contact White Crane at (404) 394-3119.

Just \$139.95!

WHAT THE EXPERTS SAY ABOUT Page Perfect™

"PagePerfect integrates file management, word processing and page layout in an exciting way. Its file management operating shell is spectacular . . . The best I've seen. The page-layout and word-processing functions are superb too."

John Dvorak, San Francisco Examiner.

"If it is true . . . that what people want to do is use their desktop publishing program to both create and format their documents, then PagePerfect is just about their only choice . . .

On a feature list, the difference between PagePerfect and either PageMaker or Ventura wouldn't appear to be great. But when you sit in front of the program, what you get is an experience that starts with word processing and then gives you access to page composition features."

Stuart Alsop, P.C. Letter.

"PagePerfect offers a combination of word processing and desktop publishing that's hard to beat.

Few programs that harbor such power are as easy to use. WordStar and MultiMate commands are supported . . . Includes a spelling checker, thesaurus, scanning, 88 Bit-stream fonts and a graphics editor—all for \$495."

Marvin Bryan, PC Week.

"The best program I've ever seen on a microcomputer."

Steve Wagh, Brown - Wagh Publishing.

PagePerfect let's you create professional looking letters, proposals, newsletters and memos . . . in minutes, not hours! At a price of \$495, you can't go wrong by listening to the experts. Call IMSI today for the dealer nearest you (415) 454-7101, (800) 222-4723, or (800) 562-4723.

PC EXPRESS™ PROGRAMMER'S WORKBENCH

dBASE AT THE SPEED OF C

dbx Translates dBASE Applications to C

You dBASE™ programmers know what an extensive and readable language dBASE is. It's a very comfortable development environment. But the price is debatable performance. Even compiled dBASE doesn't offer the speed that some users require these days. The kind of speed offered by software written in the C language. The answer is dbx™. dbx translates dBASE to C. It offers you a major competitive advantage over the rest of dBASE programmers. Keep writing in dBASE. Take every application all the way to completion. Then use dbx to translate them top to bottom to C!

Other advantages: C is portable, even on other operating systems like UNIX, Xenix™, To the Macintosh or Amiga. dbx gives you applications a passport to places dBASE cannot go. You own the master files for single user, but look to master C file managers—c-tree and dBC—for compatibility with dBASE files or multi-user support. We have everything you'll need, including good advice.

BRIEF/ABRIEF

The Power Environment for dBASE Programming

Many worthy utility products supply needs that dBASE's "programmer language" doesn't—GUTS™, dFLOW™ and a host of others. Trouble is, you have to use them separately, then combine their output into your dBASE program files.

No longer. dBRIEF™ written in BRIEF's macro language, grabs hold of dBASE and turns it into a complete dBASE III and III Plus programming language. Using BRIEF's underlying shell capabilities and its own interfaces, dBRIEF can run external utility libraries, plus dBASE itself, and link to the dBASE™, dBASE™, dBASE™ and QuicKbase™ compilers. All with dBRIEF still loaded and running the show. It can do what BRIEF already does plus:

- Convert a screen layout into dBASE code for interactive data entry
- Display dBASE file structures in windows, a great convenience alongside your program files
- Expand keystrokes into full dBASE statements
- Index automatically for clog display
- Create databases, index files, invoke dBASE. This is dFORM™ and dCONVERT™, draw lines and boxes
- Simply marvelous programming environment for writing and editing dBASE programs. PC Magazine, 7/86. Source code included!
- Requires BRIEF 1.32 or later and 384K, 512K to run dBASE within dBRIEF, 640K and harddisk recommended
- BRIEF/ABRIEF Let \$275. Ours call.

APPLICATIONS PLUS For dBASE

The Complete dBASE Companion

Who says you can't have it all? APPLICATIONS PLUS has everything you need to get the most out of dBASE. An application generator (QUICKCODE PLUS), relational report writer (QUICKREPORT), and graphics system (dGRAPH).

QUICKCODE PLUS offers dozens of features you've never seen before in a dBASE code generator. Relational applications that read, display, and update a dozen or more databases simultaneously. "Real-time" calculations, performed on screen as the user enters each field. Forms up to 11 screens long, with the ability to pass data between screens. Computational formulas that automatically combine data from different databases. 4 Data types. 16 field types.

QUICKREPORT is a full-featured, relational report writer, which combines up to 6 databases in one report, handles many-to-one relations, fancy printer features (like bold and italics), computed fields, and up to 16 levels of totaling and sorting. dGRAPH is a graphics system that produces bar, pie, line, and pie-bar charts directly from dBASE data. Dozens of options let you tailor graphs to your needs.

APPLICATIONS PLUS is 100% compatible with Clipper and FoxBASE+.

MICROSOFT LANGUAGES

Powerful Implementations Of The Most Popular Programming Languages

Microsoft C 5.0. The flagship of the Microsoft line runs up to 30 percent faster than its predecessor. Its new optimization features deliver unobtainable execution speeds. 100 new additional library routines.

Microsoft MacroASSEMBLER 5.0. If you ever wanted to take on the challenge of assembly, here's your opportunity. "MASM" 5.0 is a lot easier to use, has completely revised documentation, and a new "Macro Language" programming guide that gives you step-by-step instructions for linking your assembly code with other Microsoft languages.

Microsoft QuickBASIC 4.0 is a revolu-

tionary concept in BASIC programming. It allows you to run, edit, debug, and run again. Our friends at Microsoft have eliminated the dreaded compile step. Whenever you edit your code QBS automatically incorporates your changes, so that it can run a program of 150,000 lines in less than a minute.

Each member of this language family includes the renowned debugger CODEVIEW.

NOVELL: BTRIEVE, XQL, XTREIVE

Sophisticated Tools Essential For Fast Database Handling

Btrieve is a library of subroutines that allows the programmer to build a database application using any language. It takes complete charge of all file creation, indexing, reading, writing, insertion, deletion, forward and backward searching. Its balanced tree indexing scheme finds any key in a million in less than 4 seconds. That's fast!

Btrieve is multi-lingual also. It includes more than 20 language interfaces (including C, BASIC, PASCAL, FORTRAN). However if it turns out to be using something a little unusual, worry not. The manual includes a chapter on how to write a language interface to Btrieve.

Btrieve's vital statistics are equally impressive. Files may have up to 24 indexes, fixed record lengths to 4096 characters, variable length to 64K, indexes to 255 characters. List of 4 billion bytes. Network support includes Novell, 3-COM, IBM PC NET, Software Link's Multilink and many others.

XQL is a relational database management system designed especially for programmers. Imagine being able to access your database with the ease of SQL (Structured Query Language) statements and still having the power to process that data night down to the byte level.

Think about your applications. A large part of your software development effort is probably devoted to managing data stored in files on disk. Hours spent writing lines of code to search and store data

records could have been used to program more important parts of your application. Why not let XQL do it for you? XQL will increase your programming productivity and let you focus on building better applications.

The XQL system works in tandem with Btrieve and has an equally powerful database. No limit on the number of records per file. Max. file size is 4 gigabytes. Max. record size equals 64K. Max. indexes per file is 24. The one version works for single or multiuser systems. DOS Ver 3.0 or greater. All languages are supported.

Xtrieve is the final ingredient in the Novell programming recipe. It is a menu-driven, data retrieval system, that allows you to quickly find information and display reports. System developers can easily customize Xtrieve to display command menus, help files, and error messages in the English spoken by the customer. Xtrieve screens then give menu choices that users can quickly recognize, making Xtrieve an easy product to use and understand.

Report Option for printing customized reports, form letters, mailing labels & statements.

Toshiba 386-Based T5100: Heavy on Performance, Light on Convenience

PC HANDS ON

BY JOHN DICKINSON

Given Toshiba's outstanding performance in the laptop arena, the company's new 386-based T5100 offers what at first seems like an ideal configuration for taking high performance on the road. Though not as speed-conscious as a few lunchbox-type portables, the T5100 is easily the fastest and most powerful laptop on the market.

However, using the T5100 for a while may convince you that this 15-pound laptop is not the ideal traveling companion. The screen is the biggest

source of bad news about the T5100. It's of the gas-plasma variety, all right—undoubtedly the most glamorous laptop-screen technology available. But, like the new generation of Compaq portables, it has low-contrast EGA compatibility with only three gray scales to

The Toshiba T5100 delivers powerhouse performance for a laptop machine, but, nevertheless, it has its shortcomings.

simulate different colors.

In addition, Toshiba designers decided to try to take advantage of the 400 vertical dots on this screen by defining a character set that is one dot higher than the standard EGA character set. I found the resulting extra-tall characters rather annoying, whether using the normal single-dot or bold double-dot display.

My complaints to Toshiba about the low-contrast screen were answered with a new unit that admittedly sported a somewhat better screen. But even the better version couldn't compare to the GRiDcase 1350's high-contrast gas-plasma screen (see [continues on page 35](#))

IZE: Links to Applications Add New Twist to Managing Free-form Text

PC HANDS ON

BY NEIL J. RUBENKING

At its worst, Persoft's IZE rates as an excellent free-form information manager. At its best, it constitutes an entirely new way of integrating the applications and information you use.

IZE achieves this integration by coupling an exceptional search engine with the ability to link to external files and their applications. In other words, when a search yields a link to a non-IZE file, following that link automatically invokes the appropriate application for editing the file.

There's no need to reenter

volumes of existing data into IZE. IZE's Import facility can bring in even large files containing many items and can split the files into separate "texts"—the basic unit of IZE.

You tie keywords to texts either manually or by using an automatic filter, known as a keychanger in Persoft parlance. If imported texts include lists of keywords, you can tell IZE where to find them by pinpointing their location within the document. IZE also sports its own editor, so you can create new texts within the package itself.

Once you've imported or created your texts, you're ready to begin searching—and appreciating the real power of IZE.

Macros allow you to specify

keyword-searching abilities you'd expect from a free-form information manager, including the use of logical operators to combine keywords. You can also make use of fuzzy keyword searches—searches that return approximate matches as well as exact hits. A search of the fuzzy keyword "exit," for instance, might include a reference to a keyword "exist."

Macros allow you to specify common sets of keywords as one word. You can also search for words that are not keywords; IZE will search every text for the word at blinding speed.

(continued from page 33)

The IZE outline view—one of its most powerful features—helps you narrow your search and follow links once you've specified your keywords.

The outline lists each text targeted by your keyword search and totals up the frequencies of all the additional keywords in each selected text. Each entry in the outline is either a link to a text or a link to another outline. IZE ensures that the outline always fits on one screen.

You can expand sections of the outline, browse through all the chosen texts, or use the information the outline contains to build a new query.

To reach a file belonging to another application, you simply move the cursor to the corresponding "hot link" and press Enter. As long as IZE has a driver for the application that created the file, it will invoke the application and automatically load the correct file.

If you need to link to a program that's not one of the 25 or so already supported, you can create your own driver easily enough. Persoft documents the necessary information—such as

Agenda: Lotus's Answer to Information Management

Cross a pad of Post-its with a database, toss in a dash of hypertext, murmur the letters "AI," and you've got a rough approximation of *Lotus Agenda*. We got our hands on an early preview copy of this \$395 "personal information manager," and, if reaction here is any indication, this program promises to be a hit.

While *Agenda*, IZE, Symantec's *Grandview*, and others share common ground as information managers, they're more different than any three word processors or databases.

Agenda is an organizer for thoughts, staffing plans, sales contacts, and ideas generated by blurbs in *Forbes*. Big deal: an outliner or a word processor outfitted with text retrieval software can hold that information, too. *Agenda*, however, doesn't restrict you to one or two static views of your information. It's a

natural for anyone whose job involves managing ideas.

The *Agenda* metaphor comprises three building blocks: items, categories, and views. Items are how you enter information, categories are how you file information, and views are how you look at the information.

For example, I've been using a prerelease version of *Agenda* to manage *PC Magazine*'s feature story assignments. The elements are the year's 22 issues, editors managing the issues, topics, writers, and deadlines. Separate *Agenda* views might show the story lineup for a single issue, all the LAN reviews throughout the year, or stories written by individual authors. *Agenda*'s predecessor was a 10-foot-wide bulletin board covered with 3 by 5 cards.

Other bells and whistles:

- "Conditions" and "actions" help automate the organization of your thoughts. You might, for example, specify that any item containing the phrase "Quimby contract" be automatically routed to Phil, unless "Jennifer" is also in the item, in which case it's routed to her.

- Notes. You can add notes (10K) to your items, import, or simply reference external files. The external file could be an e-mail message or the text of a newspaper article on grain futures. *Agenda* can categorize or assign based on the content of the notes.

- Smart date arithmetic. *Agenda* understands "last Friday," "end of July," and "every Friday" as dates. It even understands "fortnight." You can restrict, or filter, your view to items falling between two dates.

The DOS version of *Agenda* is slated for shipping in a few weeks and the OS/2 1.0 version about 3 months later.

—Bill Howard

est but complete text editor is best suited to shorter texts. The editor features easy mnemonic commands and simple formatting features, such as headers,

of standard form letters.

You can insert hypertext-like links between texts within the editor. Just tack down one end of the link, then find the other end and connect it. Thereafter, by simply hitting the Enter key with the cursor on the link symbol, you can jump back and forth between the linked texts.

Searching, linking, generating outlines—these are IZE's specialties, and they're very fast. Other functions are not so fast, however. Allow hours rather than seconds for importing large files into the program.

Persoft may yet have a few loose bolts to tighten within IZE. Something in my true-blue antique IBM PC interacted nastily with it, disabling the application links. On an up-to-date 80386 machine, it worked beautifully but occasionally seized up on full text searches.

There's no handy physical metaphor for the way IZE links items in a textbase. It doesn't just offer a faster way to search free-form data. Rather, it offers a whole new way of working

with your computer. You may find that the way you naturally work makes more sense than other applications have led you to believe.

The IZE outline screen represents links to texts with a solid arrow and links to other outlines with a number in braces. The number is a count of texts in the indicated outline.

directory path and program name—and the installation program includes an option to create a new driver.

The IZE editor definitely isn't for writing books. Its mod-

footers, and margins.

The editor supports all major printers, however, and is completely satisfactory for office letter writing. In fact, one sample textbase contains hundreds

Toshiba T5100

(continued from page 33)

PC Magazine, March 29, 1988).

As a consolation, the T5100 will accommodate an EGA monitor via a 9-pin D-connector on the system's rear panel. However, a separate EGA monitor is not exactly a luggable solution to the T5100's screen problem.

The T5100's overall performance leaves little to be desired. Indeed, Toshiba deserves credit for packaging so much power in such a small machine.

Its power comes from a 16-

optional 80387 numeric coprocessor.

The hard disk was the biggest surprise, earning an impressive 38-ms. access time on PC Labs Benchmark Tests. More importantly, it keeps up with most full-size machines when it comes to DOS file access times, where disk performance really counts. If Toshiba supplied a disk-caching program, the T5100's hard disk performance would rate even better.

The microprocessor and memory perform right up there with Compaq's Deskpro 386 (the company's 16-MHz ma-

tops for too long to fool with anything that won't run the full gamut of DOS software. The T5100 ships with MS-DOS, Version 3.2, which is adequate but does not support *Windows*/386. Toshiba reports that DOS 3.3 is being prepared for distribution "at a later time," along with a laptop version of OS/2.

Toshiba makes one of the best portable keyboards around. It's got a predictably rattly feel that makes me feel at home, possibly because I'm so used to typing on a T1000. The keys are in a nicely compact arrangement that gives you all the keys on an 83-key keyboard, albeit in modified locations, and complies with most users' needs. Unless, that is, you're looking for a 10-key numeric keypad—which Toshiba will be happy to supply you with as an additional option.

It's hard to find this much computing power in a 15-pound package anywhere else. But one must wonder exactly what niche the T5100 will fill.

At 15 pounds, it's too heavy for my tastes in a laptop machine, and a laptop that requires a power cord seems like a silly

It's hard to find this much computing power in a 15-pound package anywhere else. But one must wonder exactly what niche the T5100 laptop will fill.

MHz 80386 Intel microprocessor, 2 MB RAM (which is upgradable to 4MB), and a 29-millisecond, 40MB hard disk drive. The standard configuration also packs a 1.44MB floppy disk drive and a socket for an

machine) and, for that matter, any 16-MHz 386 you could name.

You're also not likely to come up with any compatibility problems running the T5100. Toshiba has been too successful at making PC-compatible lap-

FACT FILE

List Price: With 2MB RAM, gas-plasma screen, 1.44MB floppy disk drive, 40MB hard disk, \$7,499.

In Short: Exceptional performance for a laptop. But the machine's lackluster display, 15-pound weight, and power-outlet requirement cast doubts on its desirability.

CIRCLE 448 ON READER SERVICE CARD

idea to begin with. At \$7,499, the T5100 is also expensive. If high-powered portability is your quest, a portable lunchbox-style computer like the Compaq or Dolch-Pack might serve your needs as well. After all, 20 MHz in Compaq's pail is only \$500 away.

Benchmark Tests: Toshiba T5100 vs. Compaq Portable 386

Toshiba's 16-MHz 386-based portable pumps instructions at a slightly slower rate than Compaq's 20-MHz 386 portable, but the Toshiba's hard disk fetches data at speeds comparable to those of the Compaq portable.

Performance Times (Times given in seconds)

	NOP	80386 Instruction Mix	File Access (small record)	File Access (large record)
Toshiba T5100	2.08	4.45	62.87	14.35
Compaq Portable 386	1.71	3.24	64.89	13.93

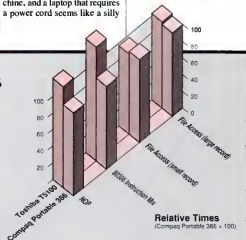

The **NOP** benchmark test is designed to measure raw clock speed and memory access time while minimizing differences in microprocessors and the effect of memory caching. This test executes almost nothing but NOP ("No Operation") machine code instruction in a big 128K loop.

The **80386 Instruction Mix** benchmark test measures the time it takes to execute a selected series of processor-intensive tasks. The test program uses 80386 instruction code. These instructions are a subset of the

total processor instruction set. The 80386 Instruction Mix implements a number of 32-bit operations. In the 80386 processor these become single instructions, whereas in the 80286 and 80287 versions of the benchmark test they remain multiple instructions.

The **File Access** benchmark test measures the time it takes to perform a series of disk operations: a sequential create and write of a 256K data file; a sequential read of the same file; a random write; and a

random read. The first set of results reports the time required to perform the test using record lengths of 512 bytes and 4K. The second set of results is the time required to perform the same test using 10K and 32K records. The larger record sizes show how a disk will perform in loading large programs and loading and saving large data files. Higher throughput systems such as RLL drives will show better performance in the large record test.

Emerald Bay and Eagle: The New Breed of Database Manager, Almost

PC HANDS ON

BY GENE SMILGIEWICZ

Migent's new distributed-processing duo—*Emerald Bay* and *Eagle*—represent the shape of database management systems to come. *Emerald Bay* comprises the database engine, while *Eagle* serves as a separate front end. The products are the brainchild of Migent founder Wayne Ratliff, who was instrumental in developing Ashton-Tate's *dBASE II*.

Though the *Emerald Bay Database Server*—the multiuser *Emerald Bay* engine—won't ship until the end of June, *Eagle* incorporates a single-user *Emerald Bay* engine that offers the same data-storage features without the multiuser capabilities.

Eagle, including its engine, is bug-laden and lacking in some features—a result of Migent's rushing the product to market. Migent has vowed to support purchasers of early releases “like kings,” however, with a steady stream of free bug fixes, upgrades, and hot-line support, not to mention an ISV program for developers.

The single-user engine bundled with *Eagle* mirrors the coming *Emerald Bay Database Server* in its data storage abilities. The *Database Server* will add transaction processing and a powerful array of multiuser features.

The single-user engine comprises the database engine program and several core component utilities. The engine performs as a TSR program or a co-resident process occupying 130K RAM.

Emerald Bay databases are composed of up to 1,000 data tables contained in a single disk file, supported by a like number of indexes in a related index file. A database table record can contain up to 800 fields and 10,000 bytes, using the nine finite field data types that are available.

A variable-length “binary” field type, which did not function properly in the review copy, allows up to 2 billion bytes of storage per field and can contain any type of data.

The largest character field may be 512 bytes, while a special “packed” field can contain up to 1,024 numeric and punctuating characters. The four nu-

meric data types offer similarly scaled precision. I particularly appreciated the field replication factor, which allows any field to be treated as a one-dimensional array of up to 100 elements.

A data table can contain up to 2 billion records, and seven databases may be open at one time. In other words, up to 7,000 tables plus 7,000 indexes can be active at any time.

Using the database administrator is a straightforward process, though experienced users may be nonplussed by the impressive security provisions.

The data form generator and entry components are nothing to write home about, but the report writer, oriented to programmers, is well implemented and looks quite powerful.

The import/export module supports ASCII, *dBASE*, and *Lotus 1-2-3* formats, as well as creation of control files to facilitate repetitive operations.

Eagle

Once you've defined the tables and indexes for your databases, you can invoke *Eagle* and operate in command mode, à la *dBASE*, or develop and run application programs. As a nice touch, *Eagle* includes its own fine text editor.

This initial version does not supply the promised compiler or its ultimate feature set. It's also flawed by more than a few bugs. Nevertheless, I found it exciting to use.

Ratliff obviously reworked some of the basic functions botched in *dBASE*, implementing the *Eagle* features more effectively as a result. With *Eagle*, when you delete a record it is gone forever. No more annoying PACKING.

Gone, too, is the need to constantly index data. Once defined, indexes are maintained automatically, whether used to control a table sequence during updates or left “idle” during the process.

In general, *Eagle* is very ele-

gant in the way it manages data storage and in the tools afforded to manage memory requirements. Modules of code and binary routines may be swapped in and out of memory at will. Memory-variable usage is limited only by available memory and may include 13-dimension arrays of up to 10,000 elements. The only price you pay for all this is more-stringent data typing requirements.

Eagle provides most of the commands and functions necessary to create complex application programs, as well as the means to create user-defined functions and to call external binary routines.

How well all these features work together under the stress of real-world loads will be open to debate until a stabilized version is available.

All in all, the intrinsic merits of the initial release of *Eagle*, with its single-user *Emerald Bay* engine, far outweigh its deficiencies.

The inherent superiority of Migent's distributed approach, coupled with the inspired coding of an older and wiser Wayne Ratliff, make *Emerald Bay* and *Eagle* worth wrestling with. ☐

Distributed Database Processing

Distributed database processing separates the front-end user interface from the engine that performs the actual, nitty-gritty data storage and retrieval.

In a nondistributed DBMS, when a user indicates that he wishes to index a data file, for instance, the front end forwards the instruction to the integrated engine. The integrated engine in turn passes a request to the network file server to send the contents of the database over the network back to the workstation running it.

After the data records are indexed, the index file is saved

back to the network server. Sending large files not only ties up the network but also increases the risk of data corruption due to transmission errors.

In a distributed DBMS, the engine runs on the server itself. The front end's workstation simply forwards a terse indexing instruction over the network to the database server. The database engine then performs the index operation on the file, located on one of the server's disks, and sends only a completion code back to the originating workstation when done.

CIRCLE 459 ON READER SERVICE CARD

\$699 Super Cartridge Squeezes 23 HP Font Cartridges into One

PC HANDS ON

BY EDWARD MENDELSON

The folks who designed Dick Tracy's ultraminiature wrist TV seem to have gone into the font-cartridge business.

IQ Engineering's \$699 Super Cartridge 1 (\$599 until September 1) shoehorns fonts from 23 Hewlett-Packard LaserJet cartridges into a single cartridge. The Super Cartridge is no bigger than the units it replaces; it's merely smarter.

The fonts look as good as Hewlett-Packard's best and, with most applications, you can plug in the Super Cartridge and start printing without fussing over printer drivers or escape codes.

The Super Cartridge 1 contains 55 fonts in ten different styles. In portrait mode you get Helvetica in sizes ranging from 6 to 14 point and Times Roman from 8 to 14 point. Letter Gothic ranges from 4 to 14 point. The Presentation font comes in 14- and 16-point sizes, OCR-A and Courier in 12 point, Prestige Elite (including math versions)

in 7 and 10 point, Line Printer in 5 and 8.5 point, and Line Draw fonts in 12 and 14 point.

All the bold and italic variants that come in the Hewlett-Packard A through Z cartridges are included. Most of these styles are also included in landscape mode.

IQ Engineering couldn't find a way around the laws of physics or the hardware limitations of the LaserJet, so the Super Cartridge doesn't contain absolutely everything that

comes in HP's cartridges. A few rarely-used landscape fonts are omitted. The crudely designed fonts in the obsolete B and F cartridges are ignored in favor of the superior versions in the "Microsoft" Z cartridge.

With most fonts you get only the standard ASCII character set, which means that you can print any character that appears on the keyboard but not the foreign-language characters that come in Hewlett-Packard's Roman-8 character set. But HP's

Helvetica 8 point

CIRCLE 433 ON READER SERVICE CARD

math, legal, and line-drawing characters are fully present and accounted for.

With some effort, you can construct foreign characters using the accents and symbols that come in a special font. But for extensive foreign-language work, you're better off with the Courier font that comes with the LaserJet II or with one of HP's cartridges.

Before you join the circus-poster-and-ransom-note school of typography, keep in mind that the LaserJet lets you use only 16 fonts on a page—and two or three are plenty for good design. 

A Tutorial Approach to Mastering DOS

PC BOOK REVIEW

BY GUS VENDITTO

If you're a regular reader of this magazine's Productivity columns, *Taming MS-DOS* is probably too tame for you. But it may be the book you should be recommending to less-fortunate users.

Old DOS hands who give this book and 10 minutes of their time to a rank novice can sit back and enjoy the rewards of having brought another new user into DOS adulthood—without answering questions every 20 minutes.

On the whole, the tutorials

are well done and clearly explained. The book quickly moves into lessons on writing batch files that should prove rewarding to anyone willing to take the time to learn. Simple explanations of the boot sector and disk interleaves are short and to the point, and tricky concepts like ERRORLEVEL test statements are introduced and explained as they're needed.

This is far from a classic, however. It includes a hodgepodge of utilities Thom Hogan has written over the years. All of them are useful, but some, like a *WordStar* file stripper, seem to have been tossed in to fill pages. Hogan recommends

that you upgrade to DOS 3.2, but includes utilities that provide functions added in DOS 3.2. He also rather glibly points his fledgling DOS users in the direction of MASM for creating DOS utilities.

If you want to turn your own system into a derivative of Hogan's, you can order a \$25 disk with 21 utilities, plus the BASIC or assembler source code and a handful of batch files. All are common utilities, available more economically as public bulletin boards and PC MagNet.

Taming MS-DOS gives the effect of taking the reader on a tour of one man's approach to building a customized system.

ERASE *.*

Are you sure (Y/N) ? Y_

<<<<<< Data Guardian >>>>>>

New Disk Optimizer gives you the courage to say yes!

**Introducing Disk Optimizer 4.0.
Now with Data Guardian™ and
Undelete.**

It's the moment of truth.

You've decided to erase an entire directory, and your computer asks, "Are you sure?"

Well? Are you? Is it the right directory? Will you ever want these files again?

Enter new Disk Optimizer 4.0 with Data Guardian. The only disk utility software that lets you blithely say "yes" now, and if you want, change your mind later. Because only Data Guardian ensures that anyone can Undelete files, directories, even entire disks. And do it hours, days, up to weeks later, no matter what else you've written to your disk in the meantime.

Best of all, Data Guardian makes file recovery quick, easy and totally foolproof. Without the complexity of other data recovery software. And without the uncertainty. Thanks to Data Guardian, Disk Optimizer comes through for you every time.

You formatted what drive?

That's fine for erased files, you say. But what happens if you accidentally format your hard disk? No problem. Disk Optimizer comes through again with UnFormat that can instantly restore all

the data on your disk to exactly where it was before that little slip of the finger on the keyboard.

And to make sure your data is really safe, the TrackSaver program protects the surface of your disk from excessive wear by periodically repositioning the head on your drive when it's idle. And the Refresh program prevents the bad spots that develop on disks due to fading magnetic charges.

Still the safest buy in performance optimizers.

As always, Disk Optimizer also gives you the safest, most advanced performance optimization available—proven by over a quarter of a million users.

The Optimize program speeds up disk reading and writing times by up to 300 percent by undoing the file fragmentation that takes place naturally over time. The DOCongig program lets you arrange the layout of your disk for best overall performance.

And the Analyze program gives you a graphical look at the condition of your disk, so you'll always know when it's time to optimize again.

A total of 17 different programs.

Disk Optimizer includes Findfile for locating files by name or wildcard anywhere on your disk. Sorts for re-arranging files and directories in the way that makes sense to you. Lock and Unlock for password-protected file security. Killfile for erasing sensitive data permanently. And lots more.

In all, there are 17 different programs in the new Disk Optimizer. Each one designed to improve performance, guard your data, and make disk management easier and simpler for everyone.

So get new Disk Optimizer 4.0, and get more than the courage to say yes.

Get the peace of mind and total confidence that your disk is running better and safer all the time. CIRCLE 34 ON READER SERVICE CARD

PIPELINE

TOP TEN SELLERS

(A 5-week history)

IN PERSPECTIVE

The Top Ten Sellers list ranks PC business programs according to their sales performance in the last week of a 5-week period. It also tracks programs' rankings (reading left to right) from April 4 through May 7. A 5-week history is charted to give a sense of a program's sales strength over time. Dramatic shifts in a particular program's ranking may be the result of sales promotions conducted by individual retailers. Seasonal factors, such as end-of-year-budget purchase decisions, can also play a large role in the performance of a particular program in any period. More than 12,000 individual locations contribute to the list.

Sales information compiled by Ingram Software Inc.

Many products that play a daily role in personal computing never get reviewed in *PC Magazine*. My fingers twinge as I write that, but it's a fact. We review every kind of software and hardware product that's available to help you get through your work, but some hardware

can't be used alone and can be reviewed only within the context of a full system.

We don't review memory chips, because total system design determines how quickly your RAM can store and retrieve data.

We don't review the Phoenix and Award BIOS firmware—even though they are a crucial element in system performance—because you can't buy them for your own PC. The manufacturer of your computer

had to select the best BIOS for you, and even if the company

Rankings are based on net sales by unit; returns are subtracted from gross sales.

SURVEY

The gurus who told us that people would be using computers to shop from home were among the experts proven wrong in our most recent survey.

This survey was conducted on-line, so it polls only those who are already connected to on-line services, and it was conducted before the introduction of PC MagNet (see *First Looks*, page 46, May 31, 1988), which has attracted thousands of new users since it began on May 1.

The single most popular activity—special-interest groups—mirrors the popularity of CompuServe, home to several hundred such groups.

Which on-line services do you use?

didn't make the right choice, there's nothing you can do about it (unless you're in the habit of burning code into ROM chips on a regular basis). Matching the right BIOS with the right PC design is a crucial decision for PC makers, but it's the finished system that has to be rated, not the BIOS.

Motherboard Choices

And we don't review motherboards (unless one was designed as an upgrade), although we'll often refer to them in reviews of systems. The performance of a particular motherboard is often the determining factor in whether one PC brand is a better buy than another. Many manufacturers rely heavily on commercially available motherboards; others, like Compaq, Tandy, and Zenith, put a lot of research into designing custom components that give their machines a competitive edge.

The most popular motherboards are sold by Intel to manufacturers. Companies like Kaypro, PC Discount, and Corvus Systems have built 386 PCs around Intel's motherboards, taking advantage of the extensive research Intel pours into these systems to ensure

that they'll be compatible with the widest possible range of plug-in cards. Intel first built motherboards to test processors under development. It soon realized it had learned so much about system design and

they've broken the latest clock speed limit. What many of them have done is built a machine around Intel's SYP 302, which has these standard features: a 386 running at 25 MHz; 2MB of system RAM (expandable to

If you want to know about the immediate future of desktop computing, you need to take a look at this behind-the-scenes product from Intel.

compatibility testing that a motherboard line was a natural complement to its existing businesses.

We won't be reviewing Intel's latest 25-MHz 386 motherboard in the magazine, but we've taken a close look at it and are already starting to review the machines it powers. In the June 14, 1988, issue (First Looks, page 46), we reviewed the CAE/SAR 386II. If you want to know about the immediate future of desktop computing, you need to take a look at this type of behind-the-scenes product.

The market is already becoming crowded with hardware makers advertising that

8MB); a 64K memory cache; a 220-watt power supply; two serial ports; one parallel port; seven 16-bit slots; two 32-bit memory slots; and FCC Class B certification. The I/O bus runs at 8 MHz, ensuring compatibility with the modems, network cards, and graphics adapters on the market.

Purchase the right disks and controllers, place them inside a box, plug in the keyboard, and you have got a system that is at the forefront of PC technology.

If you wanted to make a system that was a couple of million instructions per second behind today's speed leaders but \$3,000 less expensive than the \$6,450 SYP 302, you'd use

either Intel's SYP 301 or its SYP 301Z. Both are 16-MHz 386s; the 301 executes at one wait state, and the 301Z performs at zero wait states. Of course, you can't do this on your own, unless you're willing to order several hundred boards from Intel. But you could do worse than to purchase an 80386 PC based on an Intel motherboard.

Boards That Run OS/2

Intel's compatibility testing will benefit consumers most when they're ready to boot OS/2. These boards are now running Microsoft's standard edition of OS/2. Using a nonstandard disk controller or video card could stop OS/2 before you've even completed its long-winded installation procedure, but since a majority of manufacturers use components that conform with current standards, this won't be a problem for most.

On the other hand, no OS/2 device drivers exist for some fairly popular storage devices (like Iomega's Bernoulli Box), so the OS/2-minded consumer can expect a few more gray hairs no matter which PC he decides to buy.

—Gus Venditto

How many hours per month do you use on-line services, on average?

What kinds of services do you use?

INTRODUCING TIME LINE 3.0: BECAUSE THERE'S NO SUCH THING AS TOO MUCH POWER.

NOW THE #1 PROJECT MANAGER* PUTS EVEN MORE POWER AT YOUR FINGERTIPS.

Hold on to your personal computer. Hold on tight. Because without sacrificing Time Line's almost legendary

EASY, FLEXIBLE, POWERFUL PERFORMANCE:

- Unlimited level Outline Structure integrated throughout, open or close at any level.
- Interactive PERT shows hierarchy (outline) as nested boxes; open only what you need to see. Toggle between two PERT layouts to see the overall project or zoom in on specifics.
- Customizable Gantt with user-definable screen layouts. Add columns to show dates, resources, durations, costs, etc. Overlay Gantt with histograms for up to 5 resources.
- Undo or Redo up to 999 steps for "what-if" scenario analysis.
- Multi-Project Management with no linking required. Outline organizes multiple projects in a single schedule.
- Project Journal acts as an outline-based scratch pad and Notes attaches reminders directly to tasks or resources.
- Base line tracking produces Actual vs. Plan Gantt. Cost tracking records "actuals" and percent complete.
- Supports government reporting requirements (C/SSR). Calculates earned value and supports WBS and OBS numbers.
- Virtual Memory supports 1000 tasks with 640K RAM (1600 tasks with EMS extended memory).
- Customizable report generator is form driven to make it even easier.

ease of use, Time Line 3.0 just raised the standard of micro-based project management. By macro proportions. Imagine. An advanced outline structure from the company that invented outlining. + Interactive on-screen PERT. Multi-project scheduling and resource allocation without manual linking. And a customizable environment including Gantt, PERT, and reports. All this plus plenty of power features like the ones in the box. Seamlessly integrated. Easy. And only \$595.

Hundreds of enhancements, easy to navigate outlining... technology so advanced there are patents pending. Call (800) 888-0886 Ext. 190P for a FREE demo disk (a \$9.95 value) or FREE corporate evaluation. Time Line 3.0: the power will blow you away.

Dan Bricklin's Demo II Adds Image Capture, More Programming Power

PC HANDS ON

BY JENNIFER ZAINO

Software Garden laid in a good crop with the original *Don Bricklin's Demo Program*. Not content to let the fields lie fallow, the company has come up with a new version: *Don Bricklin's Demo II Program*.

Like its predecessor, *Demo II* lets you construct working program prototypes, demonstrations, and tutorials from a series of static screens, or slides. A programming language links the slides together.

Unlike the original, *Demo II* provides image capture and import features. You can now use *Demo II's CAPTURE* utility to grab nearly any text or bit-mapped graphics screens.

With *Demo II*, you can also import text files or *PC Paintbrush .PCX* files. *Demo II* recognizes only certain types of .PCX formats, however. A handy utility helps you determine the type of your .PCX file.

You can also create your own screens or manipulate existing ones within *Demo II* itself. Screen-building features include a nice range of word-processor-like commands, including block operations.

Some new Slides commands let you modify the slide switch speed and palette settings and change the switch type so that the screens move onto the dis-

play from top to bottom or vice versa.

Demo II adds about 100 new Run actions—the commands that link the slides. You can now instruct *Demo II* to flip through slides at a specified interval or to wait for user input before moving to a new slide. Run actions can apply only to specific slides or to all slides.

Both string and numeric

Demo II's Run menu uses Key/Event indicators, which trigger the slide-show logic.

variables are available in this version, as are several new overlay types.

Those familiar with the original *Demo* program will find the new version's manual much improved, although additional examples for the more-complex features would be a help.

A runtime-only version of *Demo II*, RDEMO2, is included at no extra cost.

CuRAM 80-8: 32-Bit Memory for PS/2 Model 80 with Modem and Port Options

PC HANDS ON

BY WINN L. ROSCH

Doing anything useful under OS/2 takes 4MB of memory. Yet the IBM PS/2 Model 80—IBM's premier engine for OS/2—ships with only 1MB, and IBM's own 32-bit memory enhancement board for the Model 80 is as hard to find as the moons of Pluto.

Enter Cumulus Corp.'s CuRAM 80-8—one of the first 32-bit memory boards for the Model 80.

The CuRAM 80-8 board avoids the use of DIP switches and jumpers by matching to SIMM type and memory capacity. It supports memory error detection and remapping, per

IBM's MCA standards.

The CuRAM 80-8 also adds versatility via two optional daughtercards. You can choose a Hayes-compatible, 2,400-bit-per-second modem or a serial-parallel port combination.

The chip sockets of the CuRAM accommodate virtually anything, providing you match the byte size of the SIMMs within each bank. One bank of four 256K SIMMs gives the board its minimal 1MB endowment; two banks of four 1MB SIMMs stretches it to its maximum of 8MB.

Unbeknownst to most folks, all SIMMs are not interchangeable. Different products have different pinouts, which means they can't be plugged into most computers and expansion cards

indiscriminately. But the CuRAM 80-8 automatically accommodates any standard SIMM on the market.

Cumulus also includes the necessary MCA setup software, an EMS 4.0 driver, and a print-spooling program.

FACT FILE

\$95 GEM Scan: Photograph to Halftone, Includes Pixel Editing

PC HANDS ON

BY MIKE FALKNER

Nestled among the flood of new products from Digital Research is *GEM Scan*, an image-scanning program. *GEM Scan* includes both the scanning software and *GEM/3*, DRI's desktop interface.

GEM Scan installs as a standalone application or a *GEM/3* desktop program. The package supports the HP ScanJet, the Canon IX-12 Image Scanner, Princeton's The Laser Scanner Model LS-300, the AST TurboScan, and the Microtek MS-300A.

To scan an image, you simply load the picture into the scanner and click on a start-button icon. To fine tune the image, use the tool-kit to select either line art or halftones and to control the brightness. With the scaling tool you can reduce or enlarge the image.

The Options menu lets you redefine the page for smaller images and select the halftone pattern when your image is scanned. You can define two

resolutions, a low one for a quick scan and a higher one to match your printer's resolution. There is also a contrast option, much like the brightness knob. With the Global option, you select the default drive, data directory, and one of two file formats, *GEM*'s .IMG or TIFF.

To edit a scanned image, you select Edit from the Mode menu and *GEM Scan* displays a new set of tools. Using the frame in the work area, you can

surround a portion of the image and rotate it left or right, flip it vertically or horizontally, or switch the dots from black to white or vice versa. With the microscope tool, you click on a small area and *GEM Scan* will blow up the image so you can edit one pixel at a time.

GEM Scan does have a few rough spots. For instance, your scanner must be hooked up to your system and turned on before you can run the pro-

The *GEM Scan* image-editing tools, the icons that are at the left of the screen, include the microscope tool used for pixel-level editing.

PC FACT FILE

GEM Scan, Version 1.1

Digital Research Inc.
60 Garden Ct.
Box DR1
Monterey, CA 93942
(408) 699-3896
List Price: \$95
Requires: 512K RAM (640K recommended), two disk drives (hard disk recommended), one of five supported scanners, DOS 2.1 or later.
In Short: A *GEM*-based scanning package with a host of editing tools, image control features, and a few quirks. Not copy protected.

CIRCLE 442 ON READER SERVICE CARD

gram—a limitation you'll curse the first time you try to edit a scanned image on a system without a scanner. The program occasionally has problems saving TIFF files, though DRI reports that this problem is being solved.

Despite its shortcomings, *GEM Scan* is a nice addition to the *GEM* family of products. It scans and edits quickly and easily and produces formats usable by most popular desktop publishing packages.

SolveIT Challenges MathCAD

PC HANDS ON

BY BARRY SIMON

Scientists and engineers often have to deal with problems that are too complex for desktop utility calculators but not demanding enough for specialized, number-crunching packages. Structured Scientific Software's *SolveIT*, like MathSoft's *MathCAD*, purports to be a scientific calculator for just such problems.

SolveIT is closely patterned after an RPN (Reverse Polish Notation) calculator but adds a host of built-in functions and some programmability.

The package's handling of complex numbers and root finding are particularly well done. It will also analyze data that you enter from the system keyboard or from an ASCII file, solve single differential equations, and handle differentiation and integration. Because you can define functions using other functions, you can also set up multiple integrals over nonrectangular regions.

There is much that *SolveIT* cannot do, however. There is no support of matrices, for example, and graphing—limited to a single function of a single variable—is displayed in CGA resolution even on an EGA or VGA

system. You can print graphs only by using the PrtSc key, and then only if you have your own program that will send graphics dumps to your printer. And you can solve equations only in one variable.

In addition, the package's poor user interface makes it difficult to recommend. While some programs are faulted for making insufficient use of function keys, *SolveIT* seems to be unique in making virtually no use of the alphabet keys.

I found some of *SolveIT*'s underlying concepts especially appealing. But with its present user interface, the package is awkward to use.

PC FACT FILE

SolveIT, Version 3.3

Structured Scientific Software
1509 Queen Ave., SW
Albany, OR 97321
(503) 926-8599
List Price: \$129, plus \$4.50 shipping and handling; with Logitech Mouse, \$219.
Requires: 512K RAM, mouse; Hercules- or CGA-compatible adapter required for graph display.
In Short: A powerful scientific calculator marred by a flawed user interface. Not copy protected.

ORACLE® turns Lotus 1-2-3 into a full function database

ORACLE, the world's best selling relational database, now works from inside your Lotus 1-2-3 spreadsheet program. Familiar 1-2-3 menus guide you through creating, modifying and retrieving data in your database. You can even perform ORACLE database functions automatically using standard Lotus macros and formulas. The point is...

Store unlimited amounts of data in your ORACLE database

Use all the features of Lotus 1-2-3 to analyze, report, and graph data in your ORACLE database.

...If you already know how to use Lotus 1-2-3, then you already know how to use ORACLE, the world's most powerful database.

By putting data into a database, Lotus 1-2-3 spreadsheet's performance is improved, long re-calcs are eliminated and your worksheets are smaller and more manageable.

- Have ORACLE for 1-2-3 build the query automatically for you and retrieve just the data you need.
- A single command automatically creates new database tables from data in any existing worksheet.
- In update mode, changes in your worksheet become changes in your database.

And if you make a mistake, you can...

- Undo changes.
- Or save your changes permanently in your database and worksheet.
- Share the same data in multiple worksheets, or even across a network of different computers with many users.

ORACLE®
COMPATIBILITY • PORTABILITY • CONNECTABILITY

Call 1-800-ORACLE1,
ext. 144 today.
For international pricing call (415) 505-0290

“For a price that's almost unbelievable, this add-in brings the full functionality of a powerful Structured Query Language (SQL) relational database-management system (DBMS) to the PC industry's most popular spreadsheet: Lotus 1-2-3... But perhaps the best news is that Oracle for 1-2-3 is very easy to learn and use. Anyone already familiar with 1-2-3 already knows how to use Oracle for 1-2-3.”

PC Week, April 5, 1988

Act now, get a 30-day moneyback guarantee and we'll pay sales tax and shipping. So fill out and mail the attached coupon, or call today. You can also purchase ORACLE for 1-2-3 at your favorite computer store.

Draw Applause: Dazzling Special Effects, Meager Import/Export and Output Support

PC HANDS ON

BY MIKE DRIPS

Draw Applause—Ashton-Tate's new presentation graphics package—seems to have been designed with one task in mind: creating slick, professional-quality 35mm slide shows. This \$495 package offers a combination of ease of use and dazzling special effects that other products only dream of.

The package is divided into three sections: the Chart Window, the WordChart Window, and the Picture Window.

The Chart Window provides the tools you'll need to create a bar, pie, line, or area chart. You enter the data to be graphed at the keyboard or import .DIF or .WK1 files. You can mix chart styles and use special enhancements, such as 3-D shading.

The WordChart Window provides seven templates for creating text slides. You can also create your own templates. The package offers several bullet types and a few variations of two type styles, Varitimes and Aristocrat.

After you create your graphs or text slides, you'll want to bring them into the Picture Window—the real core of **Draw Applause**—and where this package really shines.

In addition to providing free-hand-drawing features, the Picture Window allows you to create impressive special effects.

For instance, you can create shading and color fades using the color gradation feature. You pick a base color for the background and a second color, and the background will gradually change from the base color at the top of the screen, for instance, to the second color at the bottom. You can also create a glowing halo effect around objects or text. Other effects include spiraling text or distributed text for a coming-at-you effect.

If you'd rather tap someone else's artistic genius, you can load a choice of predesigned backdrops from the Gallery, which also includes a moderate collection of borders, symbols, and clip art. The backdrops in-

This EGA screen from **Draw Applause** couples spiraled text and color gradation. You will need a VGA system to display the effects as they would appear on a slide.

clude such effects as a line grid that appears to stretch back to a far-off horizon.

These features, and the package as a whole, prove easy and even fun to use. Unfortunately, **Draw Applause** suffers from serious shortcomings that may make prospective buyers think twice.

First, the package requires 640K RAM but supports neither extended nor expanded memory. In fact, just having the LIM 4.0 EMS driver in memory prevented **Draw Applause** from running.

My most serious complaints with **Draw Applause** center around its island-into-itself approach, however. The package supports .DIF and .WK1 formats for data import but leaves out ASCII support. Only .CGM format is supported for graphics file import and export. At a time when most graphics packages bend over backwards to support as many formats as possible, **Draw Applause**'s sparse support is difficult to understand.

Draw Applause also gives you few options for producing your exotic color images once you've created them. The package supports only one film recorder, the Matrix Instruments PCR, and two color printers, the

tics are scattered throughout the manual.

In addition, only a PGC-standard adapter and display will give you on-screen results anywhere close to the slide output. An EGA system will give you a rough idea of what to expect from a slide.

Assuming you don't mind sending your files to the Ashton-Tate service, you'll undoubtedly get excellent results. **Draw Applause** even contains communications features that let you transmit an image to the service via modem. Standard next-day service will cost you \$5 per 35mm slide. The service also offers full-color transparencies, color prints, and black-and-white prints.

The bottom line? If you're looking for a package to produce quick-and-dirty graphics for in-house use, go with a product that offers more choices for importing, exporting, and producing graphs. If only the highest-quality output will do, however, **Draw Applause** may be just what you need.

PC FACT FILE

Draw Applause, Version 1.0

Ashton-Tate Corp.
25 Sylvan Rd. South
Westport, CT 06880
(203) 222-1974

List Price: \$495

Requires: 640K RAM; hard disk drive; EGA, PGC, or VGA display; DOS 2.1 or later.

HOW TO CREATE A RECORD-LOCKED, PASSWORD PROTECTED, MULTI-USER DATABASE IN FIVE MINUTES FLAT. FROM SCRATCH.

How's this for easy. Type a paper business form (or scratched out directions for one) into Q&A. Then, press a single function key and voilà. You've created a database from scratch. Copy it onto your local area network* and now everyone can search, sort, and simultaneously share it. Instantly. Easily. And safely (with up to five levels of password protection). Think of the possibilities: using a single customer database, one person is updating while another enters new information, while a third

person runs a report. Or, forty people want to work on the expense database. All at once. Impossible?

No. Easy? Yes. But find out for yourself. Call now for a free demo disk of Q&A, the world's first networked file manager. On networks or stand-alone, when you can make it from scratch, you can really cook.

FREE Demo Disk,
Call (800) 888-0886
Ext. 430P.

The #1 File Manager and #1 Word Processor.

This multi-user database was created (from the napkins) in under two minutes. More elaborate databases with sophisticated program linking and multi-file linking, and reporting can also be created easily.

SYMANTEC

*Q&A 2.0 single user \$349 (supports full record locking of databases shared on a LAN). Optional Q&A Network Pack (\$299 when added to Q&A 2.0 on a LAN) allows three additional users to simultaneously operate Q&A. Add additional Q&A Network Packs for more simultaneous users. Q&A Software Expert's #1 file manager \$65.00. Everex and ALR Unveil Their Speediest PCs: The 25-MHz 80386s

Rising clock speeds and ever-more-sophisticated memory caches have prompted several manufacturers to insist that their 80386 machines are the fastest to be found.

The Step 386/25, a 25-MHz 80386-based PC, has a scalable memory-caching scheme previously found only on mainframes, according to **Everex Computer Systems Division**. The Advanced Memory Man-

agement Architecture wrings a 6-mips performance from the 80386, Everex says.

The Step 386/25 comes with 1MB of zero-wait-state memory, which can be increased to 16MB. Also standard is a 1:1 interleaved hard-and-floppy disk controller, a 101-key board, five drive bays, math coprocessor support, and MS-DOS 3.3. The machine is Novell, Unix, and Xenix compatible as well.

Meanwhile, **ALR (Advanced Logic Research)** of Irvine, California, claims its 25-MHz system is the world's

fastest microcomputer. The FlexCache 25386 uses proprietary 64K 82385 cache emulation and zero wait states, ALR says. The standard 1MB RAM can be increased to 14MB without resetting switches.

The 25386 uses an ESDI controller with 1:1 interleave and full-track buffering for the 150MB (\$9,499) and 300MB (\$12,499) hard disk versions.

The floor-standing system box accommodates up to two full-height hard disks and three half-height devices.

One 1.2MB 5¼-inch floppy

Advanced Logic Research's \$9,499 FlexCache 25386 runs at 25 MHz.

disk drive, 80387 support, and one serial and one parallel port are standard.

Two Hand-held Scanners Enter the Market: Logitech ScanMan and Mitsubishi MH 216

Hand-held scanners from **Logitech** and **Mitsubishi Electronics America** join Suba's entry in an increasingly crowded field.

Logitech, of Fremont, California, has announced the \$299 ScanMan, a hand-held scanner, along with scanning software called *ScanWare*. *WinScan*, a utility for scanning images directly into a *Microsoft Windows* clipboard, is also included with the scanner.

The ScanMan offers 200-dot-per-inch resolution along a 4-inch scanning width. It can scan in this width for 11 inches.

Scanned images can go directly to a TIFF file, into a *Windows* clipboard using *WinScan*, or into an included graphics edi-

tor. The graphics editor can resize, cut and paste, color, rotate, insert, and magnify scanned images.

Mitsubishi's 8½-inch-wide hand-held scanner can attach to a paper feeder to emulate a flat-bed or sheet-feed scanner. The \$995 MH 216 scans 16 gray shades at 200 dpi at a rate of 10 seconds per page.

A contact-type charged-couple device (CCD) speeds scanning, and rotary encoders are used to cope with speed changes in manual scanning, Mitsubishi reports. Two sets of rollers keep hand-scanning motion in a straight direction.

Images from both companies' scanners are usable in such

The ScanMan scans 200 dots per inch and comes with ScanWare software and a WinScan utility that allows you to scan directly to Windows.

applications as Aldus's *PageMaker*, *Ventura Publisher*, *PFS:First Publisher*, and *Z-Soft's PC Paintbrush*.

List Price: ScanMan, \$299.

Requires: ScanWare, 640K RAM, hard disk, DOS 2.0 or later; mouse recommended. Not copy protected. Logitech Inc., 6505 Kaiser Dr., Fremont, CA 94555; (415) 795-8500.

CIRCLE 429 ON READER SERVICE CARD

List Price: Mitsubishi MH 216, \$995; MH01FA sheet feeder, \$260. **Requires:** Software: 640K RAM, hard disk, DOS 2.1 or later. Not copy protected. Mitsubishi Electronics America, Computer Peripherals Division, 991 Knox St., Torrance, CA 90502; (213) 515-3993.

CIRCLE 440 ON READER SERVICE CARD

The \$995 Mitsubishi MH 216 scanner is 8½ inches wide, scans 200 dots per inch, and can attach to the MH01FA, an automatic paper feeder that lets it emulate either a flat-bed or a sheet-feed scanner.

**MicroDirect Complete Portable Office Joins Laptop, Cellular Phone**

If you need to communicate with your office PC from a location with no power source and no telephone line, you can use the **Complete Portable Office (CPO)**, from **MicroDirect**, of Everett, Massachusetts.

The CPO is based on MicroDirect's Turbo Laptop computer and a Panasonic cellular phone. A modem, a modem/cellular interface, and the 3-pound Diacom laptop printer round out the \$4,995 system. For \$5,500 you get a 20MB hard disk drive in the laptop.

The Far East-built Turbo Laptop has an 80C88 microprocessor and 1 MB RAM (640K for DOS and 384K of EMS memory). An 80-column, 640 by 200 backlit supertwist blue/green liquid crystal display is standard.

(continues on page 52)

NEW ON THE MARKET

HOT
PROSPECT**Mitsubishi Challenges Toshiba T3100 with Big-Screen MP286L**

Posing a challenge to Toshiba and other laptop producers, Mitsubishi Electronics America claims that its MP286L laptops have the largest, most readable displays of any portable computer.

The 11-inch cold cathode-ray tube (CCT) screens show black characters or graphics on a white background. Screen colors can be reversed with the flip of a switch. Neutral twisted nematic (NTN) technology makes the display readable in all light conditions, according to Mitsubishi.

A built-in CGA controller can support an external monitor as well as the page-white display. Mitsubishi says that EGA will be available in the fourth quarter of 1988.

Though Mitsubishi labels the 15.9-pound machines as laptops, the systems require an AC plug or a third-party external battery pack. The sleek black chassis measures 12.3 by 14.2 by 3.5 inches.

The laptops run an Intel 80286 microprocessor at either 8 or 12 MHz, and an 80287-8

coprocessor is optional. The MP286L comes with 640K RAM, expandable to 2.64MB.

There are four proprietary expansion slots, one parallel and two serial ports, and a clock calendar.

A dual 3½-inch disk drive configuration (\$3,195) and a 20MB hard disk configuration (\$3,995) are available.

The U.S.-assembled lunch-box computer has standard a 78-key keyboard, with twelve function keys across the top and cursor keys at the top right.

Hardware options include a 2,400-bit-per-second modem, an external 3½-inch floppy disk drive, and a 17-key numeric keypad.

Both DOS 3.3 and GW-BASIC 3.2 are standard; OS/2 is optional.

List Price: Mitsubishi MP286L, with two floppy disk drives, \$3,195; with 20MB hard disk, \$3,995. Mitsubishi Electronics America, Computer Peripherals Division, 991 Knox St., Torrance, CA 90502; (213) 515-3993.

CIRCLE 436 ON READER SERVICE CARD

Mitsubishi says its \$3,195 MP286L portable computer has the largest, most readable screen in its class. The computer has an 80286 microprocessor running at 12 MHz.

MicroDirect's \$4,995-to-\$5,500 CPD (Complete Portable Office) comprises a laptop computer, modem, cellular phone, adapter, and printer.

MicroDirect

(continued from page 51)

The built-in Hayes-compatible modem transmits at 1,200 bits per second using Bell or CCITT standards. A telcom connector on the side of the laptop connects the PC to a cellular phone adapter, or a telnet connector can be used with a regular phone.

List Price: MicroDirect Complete Portable Office, \$4,995; with 20MB hard disk, \$5,500. Turbo Laptop alone, \$1,895; with 20MB hard disk, \$2,795. MicroDirect Inc., 2010 Revere Bench Pkwy., P.O. Box 835, Everett, MA 02149; (617) 387-2200.

CIRCLE 441 ON READER SERVICE CARD

Keyboard Doubles as Diskless LAN Station

It looks like an obese 101-key keyboard, but PC Office's NT-10 is actually a 16-bit computer,

complete with an 80C86 processor. The diskless NT-10 is compatible with NetBIOS LANs, Novell's NetWare, and twisted-pair LANs.

PC Office says the company was able to fit a networking system unit in a keyboard by putting all network hardware on a single custom integrated circuit that combines the functions of 35 ICs. The result is circuitry that generates very little heat, obviating the need for a fan.

The \$995 workstation can be purchased with 0K, 512K, or 1MB RAM (with support for LIM 4.0 expanded memory) installed, and it accepts standard SIMMs. On the back of the unit are CGA, monochrome, and Hercules connectors (selectable by switch); LAN connections; parallel and serial ports; and a 10-watt power input for use with an included transformer.

List Price: PC Office NT-10, with 512K, \$995. PC Office, 4631 Viewridge Ave., San Diego, CA 92123; (619) 268-3235.

CIRCLE 443 ON READER SERVICE CARD

The NT-10 from PC Office is more than a keyboard: It's a \$995 intelligent LAN workstation featuring an 80C86 microprocessor.

Northgate Power 386: Premium Performance at a Bargain Price

PC HANDS ON

BY BILLY O'BRIEN

Field-leading 386 performance just got cheaper. Northgate Computer Systems' Power 386 rivals the power of the Compaq Deskpro 386/20 at a fraction of the cost.

The Power 386 is an upright, 20-MHz floor model with a base price of \$4,295—including a high-performance 65MB hard disk.

A 64K static RAM memory cache deserves much of the credit for the Power 386's performance. Like the Deskpro 386/20, the Power 386 maintains a high-speed, 32-bit path to memory, separate from the I/O bus.

Whereas the 386/20 makes use of Intel's sophisticated cache controller chip, however, the Power 386 falls back on a direct-map static RAM system composed of discrete logic components. Compaq's solution no doubt earns it memory

Northgate's Power 386 sports power and reset switches at the top, along with a disk activity light. Inside are eight slots.

access performance gains in some cases, but the Power 386 won't be far behind.

The hard disk drive does not have an overly spectacular track-to-track access time—28 milliseconds—but that is a mechanical measurement of disk capability. Data throughput, the

speed at which the information is actually passed across the bus and the more important measure of performance, rates as spectacular when hard disk caching is enabled. But even without caching, the large- and small-record times for the PC Labs benchmark tests rank the Power 386 machine right up there with the Compaq Deskpro 386/20.

The standard configuration includes a 14-inch monochrome monitor, one 5¼-inch 1.2MB floppy disk drive, and one 3½-inch 1.44MB floppy drive. That leaves you with one empty half-height bay.

Whether you purchase

FACT FILE

Northgate Power 386

Northgate Computer Systems
13895 Industrial Park Blvd.,
#110

Philmouth, MN 55441
(612) 553-0111

List Price: With 1MB DRAM, 64K SRAM cache, one 5¼-inch 1.2MB floppy disk drive, one 3½-inch 1.44MB floppy disk drive, 65MB hard disk, monochrome monitor, \$4,295.

In Short: The Power 386 delivers top performance and intelligent design at an excellent price.

CIRCLE 447 ON READER SERVICE CARD

this 386-based machine for its price tag or for its performance, the chances are that you won't be disappointed. Watch *Microsoft Windows* load quickly for a change, or observe a pull-down menu snap up like a runaway window shade, and you will finally get an honest feel of what speed is all about.

Benchmark Tests: Northgate Power 386 vs. Compaq Deskpro 386/20 and IBM PS/2 Model 80-111

The Northgate Power 386 holds its own against even the Compaq Deskpro 386/20 in every performance category. Despite a mediocre 27-millisecond random access speed for the hard disk, the hard disk throughput was especially impressive—with or without the disk cache invoked.

Performance Times (Times given in seconds)

	NOP	80386 Instruction Mix	File Access (small record with cache)	File Access (large record with cache)
IBM PS/2 Model 80-111	1.65	3.20	36.79	6.20
Compaq Deskpro 386/20	1.65	2.90	34.14	9.34
Northgate Power 386	1.65	2.96	7.41	5.59

The **NOP** benchmark test is designed to measure raw clock speed and memory access time while minimizing differences in microprocessors and the effect of memory caching. This test executes almost nothing but NOP ("No Operation") machine code instruction in a big 128K loop.

The **80386 Instruction Mix** benchmark test measures the time it takes to execute a selected series of processor-intensive tasks. The test program uses 80386 instruction code. These instructions are a subset of the

total processor instruction set. The 80386 Instruction Mix implements a number of 32-bit operations. In the 80386 processor these become single instructions, whereas in the 8086 and 80286 versions of the benchmark test they remain multiple instructions.

The **File Access** benchmark test measures the time it takes to perform a series of disk operations: a sequential create and write of a 256K data file, a sequential read of the same file, a random write, and a

random read. The first set of results reports the time required to perform the test using record lengths of 512 bytes and 4K. The second set of results is the time required to perform the same test using 16K and 32K records. The larger record sizes show how a disk will perform in loading large programs and loading and saving large data files. Higher-throughput systems such as RLL drives will show better performance in the large record test.

"Within a few days, SideKick *Plus* became even more indispensable than SideKick"

Dick Fountain, *Personal Computer World*

Here's what *Personal Computer World* had to say about SideKick® Plus:

"When the news of SideKick Plus arrived, I made up a shopping list of the improvements I would like to see... Borland has provided all these things and much, much more."

Intelligence and elegance of design

"I discovered that the same intelligence and elegance of design that initially attracted me are still there, and certain new features like the customizable menu system represent a real breakthrough in user interface design."

Sophisticated memory management

"Memory management in SideKick Plus is so sophisticated that it almost amounts to an alternative operating system... The amount of memory tied up is tiny (less in fact than old SideKick!)..."

The Phonebook: Fully-featured communications

"The Phonebook has come a long way... For one thing, it has acquired a fully featured communications package which can work in the background; you can upload and download files while continuing to work on your PC... The Script language is one of the best I have seen."

The Notepad: Power for serious writing

"The Notepad is as powerful as many word processors... I would happily use it for serious writing..." "Up to nine notepads can be opened simultaneously with SideKick Plus."

Outlook: The best outline processor

"Outlook is... the best outline processor I've tried, comfortably beating ThinkTank, PC-Outline, and Ready! in elegance and ease of use."

3½" and 5¼" disks included.
Hard disk required.

For the IBM PC/XT and other IBM® family of personal computers and all IBM® compatibles.

*Customer satisfaction is our main concern. If within 60 days of purchase this product does not perform to your satisfaction, we will return your money, or we will replace the product with a new one. No money-back guarantee. © 1988 Borland International, Inc. All rights reserved. SideKick Plus is a trademark of Borland International, Inc. All other trademarks and product names are trademarks of their respective owners. Copyright 1988 Borland International, Inc.

The File Manager: Competing with the standalones

"The File Manager... performs a similar function to standalone utilities like Xtree, Quick DOS, or the Norton Commander, and shares features with all of them."

The Time Planner: Hugely enhanced

"The Time Planner has advanced even further than the Phonebook... it has been designed with networking in mind."

Plus a lot more

"The enhanced cut-and-paste functions are perhaps the most attractive feature of SideKick Plus... [it] has a powerful, consistent ability to cut-and-paste from any application to any other."

"The calculator is no longer one, but four calculators; you can switch the type to Business, Scientific, Programmer, or Formula."

Positively addicting!

"In my view, the individual applications in SideKick Plus are of such a standard that I would be hard put to better them with a collection of standalone applications... I remain an addict."

Excerpts from Dick Fountain's review of SideKick Plus in Personal Computer World, March 1988.

If you have the Intel® Above®Board you can load the SideKick Plus desk accessories into expanded or extended memory and leave most of your conventional memory to run your other applications.

Tree86: Mouse-Minded Hard Disk Organizer

PC HANDS ON

BY EDWARD L. PERRATORE

It isn't easy to top X-Tree Pro for a good, sleek hard disk manager. But if you want to cut costs, give your mouse some exercise, and pick up a few more features, *Tree86*, Version 2.0, is worth the climb.

At \$89, The Aldridge Co.'s *Tree86* first shows a graphic-tree display of subdirectories. Pull-down menus offer DOS commands plus a few additions.

You drag the mouse to undrape various menus and then click options. A mouse isn't mandatory, but mouse support is one of *Tree86*'s best selling points.

Tree86 helps you find files using up to four parameters. You can sort files by several criteria and then reverse the order. While pointing and shooting to copy, tag, and move files, you

Along with routine DOS functions, *Tree86*'s Xcopy copies whole directories.

can also view chained files by using VIEW-86.EXE.

The Xcopy option copies files, directory structure and all, between drives. Hitting " / " toggles you into TreeDOS, a DOS-like environment with command-line editing and retrieval of previous commands.

There's more. The 140K

RAM required to boot drops to as low as 80K when you run TreeDOS or a different program from *Tree86*. A configuration program enables you to set which drives to log upon entry into *Tree86*. Tree structures for each drive remain in RAM until you quit the program and can be stored on-disk for quicker log-

ging the next day.

Tree86 rates as a good buy. For \$40 less than the market leader, you get all the leader's features and more.

FACT FILE

Tree86, Version 2.0

The Aldridge Co.
2500 City West Blvd., # 575
Houston, TX 77042
(713) 953-1940
List Price: \$89

Requires: 140K RAM for booting, one disk drive (hard disk recommended), DOS 2.0 or later (3.0 recommended).

In Short: Multiple drive logging and directory copying are among the attractive features of this mouse-driven hard disk manager. Not copy protected.

\$90 Utility Dresses Up 9-Pin Print

PC HANDS ON

BY JONATHAN MATZKIN

There is nothing so enticing as software that tweaks extra performance out of your hardware. The *Image Printing Utilities*, from Image Computer Systems, give your 9-pin printer capabilities more characteristic of high-end dot matrix machines. The software also teaches your 9-pin a few tricks that even high-end printers can't muster.

For openers, the package lets you load up to eight high-quality fonts at once, from a selection of 16, and freely mix them within documents. The fonts can be printed with all the formatting and character attributes your word processor and printer normally provide.

The utilities package consists of two programs—*Meta-text* and *ImagePrint*.

Metatext is memory resident and installs from either the com-

mand line or your AUTOEXEC.BAT file. With one or two fonts selected, the program occupies about 60K RAM. 120K RAM is required for the maximum of eight simultaneously available fonts.

A command-line switch specifies print quality for each chosen font. To achieve the highest quality, *Metatext* causes six passes of the printhead. The results rival output from some 24-pin dot matrix machines.

To switch among selected fonts, you simply insert a backslash, followed by a number corresponding to the appropriate font, into your word processor file. Underlining, boldfacing, and other character

attributes are invoked as usual.

ImagePrint offers the same choice of fonts, print qualities, and attributes as *Metatext* but takes a previously created ASCII text file as input. You tell *ImagePrint* what to do with the file by embedding commands that correspond to desired fonts and attributes.

In its "typewriter mode," *ImagePrint* converts your keyboard and printer into a supercharged typewriter that would make mere mortal office machines sink away in shame.

The program opens a one-line buffer that is printed immediately when you tap Enter. Your text is displayed on-screen as you type. All of *ImagePrint*'s

The *Image Printing Utilities* add multiple fonts to your 9-pin printer and convert your keyboard and printer into a versatile typewriter.

FONT1: Cubic font
FONT2: Elite font
FONT3: Italic font
FONT4: Orator font
FONT5: Typewriter font

FACT FILE

The Image Printing Utilities

Image Computer Systems
P.O. Box 647
Avon, CT 06001
(203) 678-8771
List Price: \$89.95

Requires: 128K RAM, DOS 2.0 or later, printer compatible with IBM graphics printer or Epson dot matrix printer.

In Short: Inexpensive utilities that coax startling performance out of your 9-pin dot matrix printer.

CIRCLE 435 ON READER SERVICE CARD

fonts and features are available.

The *Image Printing Utilities* won't magically transform your 9-pin printer into a LaserJet, and the additional head passes mean a decrease in speed and an increase in wear and tear. But the boost in print quality and versatility far outweighs these drawbacks.

Why Paradox 2.0 makes your network run like clockwork

Paradox* runs smoothly, intelligently and so transparently that multiple users can access the same data at the same time—without being aware of each other or getting in each other's way.

With Paradox news travels fast and it's always accurate

Paradox *automatically* updates itself with a screen-refresh that ensures that all the data is up to date and accurate all the time. Record-locking, Paradox-style, safeguards data integrity by preventing for example, two different users from making changes to the same record at the same time.

How to make your multuser network work

To run Paradox 2.0 on the Paradox Network Pack on a network, you need:

- Novell with Novell Advanced Netware version 2.04 or higher
- 3Com 3Plus with 3Com 3+ operating system version 1.6, 1.1 or higher
- IBM Token Ring or PC Network with IBM PC Local Area Network
- Program version 1.12 or higher
- Token Registry version 1.45 or higher
- AT&T Starlan version 1.1 or higher
- Banyan VINES version 2.0
- Other network configurations that are 100% compatible with DOS 3.1 and one of the listed networks

System Requirements for the Network Workstation

- DOS 3.1 or higher
- 640K RAM
- Any combination of hard, floppy, or no disk drives
- Compatible monochrome, color, or EGA monitor with adapter

*Customer satisfaction is our most concern. If within 60 days of purchase this product does not perform in accordance with our claims, call our customer service department, and we will arrange a refund.

Paradox is a registered trademark of Borland Software. Area is a Borland International Company. Other brand and product names are registered trademarks or trademarks of their respective holders. Copyright © 1988 Borland International. B-1043

“When I saw the record-locking and autorefresh in action, I couldn't believe it. Here was a true network application, a program that can actually take advantage of a network to provide more features and functions, things that can't be done with a stand-alone PC.

Aaron Brenner, LAN Magazine

With Version 2.0, Paradox becomes a sophisticated multuser product that boasts an impressive selection of data-production features and password-security levels.

Rusel DeMarla, PC Week ”

Paradox responds instantly to “Query-by-Example”

The method you use to ask questions is called Query-by-Example. Instead of spending time figuring out *how* to do the query, you simply give Paradox an example of the results you're looking for. Paradox picks up the example and automatically seeks the fastest way of getting the answer.

Queries are flexible and interactive. And in Paradox, unlike in other databases, it's just as simple to query more than one table as it is to query one.

“The program elegantly handles all the chores of a multuser database system with little or no effort by network users.

Mark Cook and Steve King,
Data Based Advisor ”

“Paradox... has quickly become the state-of-the-art product among PC database managers... Paradox still reigns supreme as the thinking user's DBMS.

Jim Seymour, PC Magazine ”

You don't have to be a genius to use Paradox

Even if you're a beginner, Paradox is the only relational database manager that you can take out of the box and begin using right away.

Because Paradox is driven by the very latest in artificial intelligence technology, it does almost everything for you—except take itself out of the box. (If you've ever used 1-2-3* or dBASE*, you already know how to use Paradox. It has Lotus-like menus, and Paradox documentation includes “A Quick Guide to Paradox for Lotus Users” and “A Quick Guide to Paradox for dBASE users.”) Paradox, it makes your network work.

THE BEST EXECUTIVE WORD PROCESSOR IN THE WORLD.*

\$29.95

ANNOUNCING A STEAL FOR PFS: WRITE AND PROFESSIONAL WRITE OWNERS, AND A BARGAIN FOR EVERYONE ELSE.

"A lot of factors make Q&A

Write (\$199) the best in this

group." Executive Word Processor

Comparisons, John Lombardi,

InfoWorld Magazine, 10/12/87, Pg. 59. Surprised?
Unfortunately, some people are. Because even though
Q&A Write was rated the best executive (easy-to-use,
yet powerful) word processor by both *InfoWorld* and *PC*
Magazine, PFS: Professional Write continues to sell. So
we've cooked up an upgrade and promotion to get the
word out. And hopefully when it's finished, thoughts of
PFS: Write will be too.

The first 5000 PFS: Write or PFS: Professional Write
owners to rip the title page out of their manual and send

it along with the coupon
from this ad and a check
for \$29.95 get a complete
Q&A Write package.

*"Superpowerful, superfast,
Q&A Write is superessential if
you need a professional word
processor that doesn't require
hiring a personal trainer."*

*Card Often Day, PC Magazine,
Editor's Choice February 25, 1988*

Feature:	Q&A Write	PFS: Professional
Number of fonts per document	9	1
Supports HP LaserJet cartridge and soft fonts	Yes	No
Prints Lotus graphs in documents	Yes	No
Hot-links Lotus documents to Lotus spreadsheets	Yes	No
Imports Lotus spreadsheets into documents for editing with fonts and enhancements	Yes	No
Number of columns per document	8	1
Runs Lotus and up to 7 programs or macros from its main menu	Yes	No
Supports Postscript	Yes	No
Date/time stamp documents	Yes	No

The same, complete package
InfoWorld rated #1 and *PC Magazine*
named Editor's Choice.

That's our PFS upgrade. And if
you don't own PFS, 5000 of you
can get a fully functional trial-size
Q&A Write package (normally
\$9.95) absolutely free just by call-
ing the toll-free number below.

Upgrade or call today. But hurry.

When the word gets out, 5000 will go fast. Q&A Write
instead of PFS. For easy yet powerful word processing,
it's the best in the World.

For our \$29.95 upgrade or FREE trial-size call:

CIRCLE 250 ON READER SERVICE CARD

Here's a radical idea: give people who work together the means to easily share information among PCs—but don't force them to become computer experts to do it.

Here's another one. Make this network so simple to install that you can set up the whole thing in oh, say, a half hour or so.

Presenting TOPS.*

MORE NETWORK. LESS NET WORK.

With the TOPS Network, you and your co-workers can access files from each other's computers exactly as if they were sitting on your own PC or hard disk. And even print out those files (with our TOPS NetPrint™ software) directly to any printer that supports the "PostScript"™ language, such as Apple's LaserWriter.™ All through easy-to-use menu commands.

The result is the very comforting—and productive—feeling of being able to concentrate on the work at hand, instead of on having to learn the network.

On a TOPS Network, every computer can share files directly with any other, thereby sharing the load of the entire network. The result is that you don't have to purchase an expensive central file server. Or shut down the network when you want to add a new computer. Or hire an extra person to manage the whole affair.

And setting up TOPS is just as straightforward. You can install the necessary network card—such as our TOPS FlashCard™—in no more than twenty minutes. Loading the TOPS software? We've unofficially clocked it under five minutes.

As if all that weren't enough, TOPS runs over common twisted-pair cabling, such as regular phone wire. Just add an easy-to-install network connector—such as the TOPS TeleConnector—at each node. And at only \$189 for the software, and \$239 for each TOPS FlashCard, TOPS is the least expensive way to get your workgroup working together.

Of course with TOPS, PC-to-PC communication is just the beginning. Because without sacrificing simplicity, we also offer products that let you share information just as easily with other networks and systems, including Macintoshes™ and Sun® workstations.

Want more information? Give us a call at 800-445-TOPS (from outside the U.S. and Canada, call 415-769-8700). Or write to us at TOPS, 950 Marina Village Parkway, Alameda, California 94501.

After that, it gets easier.

TOPS, Sun, and the Sun logo are registered trademarks of Sun Microsystems, Inc. TOPS FlashCard and TOPS NetPrint are trademarks of Sun Microsystems, Inc. PostScript is a registered trademark of Adobe Systems Incorporated. Macintosh and LaserWriter are trademarks of Apple Computer, Inc.

Supermini Rivals Jockey for Market Share

by SARAH BROWN

BOSTON—While supermini computer vendors may have not reached a stage where they have to circle the wagons to fend off intruders from a variety of competing technologies, industry observers feel they will have to at least make changes to protect their market share.

Supermini vendors, market share is being challenged at least in the high-end, mid-range and low-end, the analyst

isn't any question that some of the problems they're moving could have been done in a time-sharing scenario, but, for example on mainframes or minicomputers, said Karmali.

"I will absolutely give them that," the analyst said. "They're accomplishing things on high-powered work stations that could only have been done on high-powered minicomputers a few years ago. That's a fact of life."

But, the analyst, noted however, one can always go back to

Computer Systems Corp. of Littleton, Mass.; Core Computer Corp. of Scarborough, Texas; and Seattle Computer Co. of Redmond, Wash. Karmali also said that some vendors were consistently faced with an excess of market share of their own and, since,

But just wait till the Fruit of the Loom 386 ships. (Headline from MIS Week, March 14, 1988)

Child Prodigy

"Chau learned computer programming at Jackson High School as a fourth-grader and is teaching himself a complex computer language called 'hexidecimal' at home. He's popular in the Unified Arts class, where he spends a good deal of time answering other students' questions about rudimentary computer functions."

—Jackson (Miss.) Citizen Patriot, March 6, 1988

Dept. of Tautology

"Postscript operates on an infinite grid. This accommodates most page sizes that would be used."

Perfect matches to DEC user needs. Hip. Hip. And Hooray.

One-size-fits-all is an attribute best reserved for inexpensive socks. In the realm of PC-based emulation and communications software for DEC mainframe users, it's important to match specific user needs with specific product attributes. We have.

SmartTerm® 240 features exact four-color emulation of a DEC® VT241 terminal. Along with delivering full-screen ReGIS® and Tektronix® 4010/4014 graphics, SmartTerm 240 offers precise VT220, VT102, VT100, and VT52 text emulation.

For non-graphics applications, SmartTerm® 220 duplicates virtually every SmartTerm 240 text, communication, and ease-of-use feature. Three error-free file transfer protocols, including Kermit and Xmodem, are provided. Downloading minimizes on-line time requirements to boost overall system efficiency. And an optional network package allows direct LAN access to shared modems, printers, as well as host mainframes.

As SmartTerm 240 and 220 focus on graphics and text, new SmartMOVE® makes PC-to-the-rest-of-the-World communications sharper than ever. Speed connect, auto redial, and background file transfer features make this VT100 emulator a loud and clear choice for advanced communications requirements.

Graphics, text, and communications. If you're looking for a perfect fit, seek the software sized and priced to match your needs. Persoft has it. Period.

Visit your dealer or phone us at 608-273-6000.

■ BILL MACHRONE

IN YOUR (INTER)FACE

It's no wonder that this industry can't make any progress on user interfaces. All the decision makers are too busy attending one another's press conferences to get any work done.

My faith is shattered. I don't believe anybody anymore. For the price of a press conference, anyone can pull together a spec, call it a standard, and get half a dozen or more industry figures onto a podium to spout some platitudes about how it's The Way of the Future and the surefire cure for everything from the balance of payments to pattern baldness.

The software developers jump on the bandwagon with utter abandon, apparently terrified that one small change in hardware features or end-user tastes will leave them playing second fiddle. Actually, it isn't a bandwagon so much as a juggernaut, irresistibly consuming resources.

There's more at stake here than corporate pride and profitability. We're talking about the hearts and minds of developers, distribution channels, and corporations. The needs of the end user aren't an issue, even though end-user computing is supposedly what this is all about. This weird, interlocking network of "You tout my product and I'll tout yours" is a drain on the essential energy of our industry. The trade press goes galloping off over this hill and that, in pursuit of the latest strategic alliance, while end users just get confused. And when they get confused they tend to do nothing until they get unconfused. Thus, they don't buy into the very technologies being hyped.

Here's a brief rundown of the hoops that software developers have had to jump through of late:

OS/2 Just when everyone was getting happy with DOS, along comes OS/2. The

combatants had finally gotten the EMS spec squared away and the old 32MB volume limit was about to become history. After reading enough *PC Magazine* articles, anybody could write a well-behaved TSR program. Then Microsoft and IBM tell us DOS was never very good anyway. I believed. I still believe. The richness of OS/2's calls and the prospect of multithreading and multitasking are enough to turn me away from the safe, well-known world of DOS. The cost to developers is enormous, but they can pull it off if they're not distracted.

Presentation Manager The Presentation Manager is a different story. While the Macintosh was proving that bitmapped is better, the EGA was proving that color is better. The two merged in *Microsoft Windows*, which was too memory-constrained and processor-bound to make an appreciable dent. At the same time, IBM was shopping for a universal user interface to tie its

disparate and incompatible product lines together. The result was Presentation Manager. Never mind that the beta version of the developer's kit just shipped. Or that all the *Windows* code that developers wrote doesn't port over. They lined up dutifully on the podium.

OS/2 LAN Manager The OS/2 LAN Manager is a multiuser operating system in drag. Microsoft hopes that IBM will adopt some or all of it into its networking scheme, but IBM is playing coy. The guys on the podium were on a first-name basis by this time.

Macintosh Suddenly, to be considered a serious player you've got to support Macintosh, too. The audiences at the Mac II press conferences and shows, however, have their own heroes. The dutiful minions of DOS are shown the respect and attention normally accorded to the family dog.

New Wave New Wave is Hewlett-Packard's answer to the Macintosh. In fact, it out-Macs the Mac. The Apple folks are gnashing their teeth and firing off lawsuits over its look and the way it synchronizes tasks that know nothing about one another. It shows you what you can do with a dream and 300 person-years of programming time. It runs under *Windows* today, Presentation Manager tomorrow. There's just this one little problem. It's different. New Wave's benefits aren't free—they require substantial reprogramming of *Windows* applications to harness them. Yet the band played on, praises and promises flew from the podium, and R&D dollars were committed.

Unix Unix is the newest old hoop to

jump through. Ashton-Tate, WordPerfect, and a few others have maintained terminal-based versions of their products so they could have a toehold in the multiuser environment. By and large, however, the products worked and looked far better on their native DOS machines. Yet the usual CEOs could be counted on to trundle out to any introduction of a new Unix machines and speak in glowing generalities about its bright and unlimited future.

Open Look Heyyy, up! March to that podium, boys, and tell 'em how the future depends on this amalgam of AT&T, Sun, and Xerox technology running on 200,000 workstations under Unix. This user interface is spectacularly good, but it runs on the tail, not the dog. It also lacks the participation of several major workstation vendors. Sun likes to smile and shake its head, saying, "Poor DEC. Poor HP. Poor IBM. They just don't understand." Right.

Needless to say, there are countless others. No hardware manufacturer rolls out a new machine today without a guggle of software manufacturers on hand to testify to its engineering genius and perspicacity in producing this machine. Of course, much of this is an endless dance to maintain a high level of awareness in the investment community. At the podium, the CEOs become like talk-show guests, famous for a Warholesque 15 minutes, or, like latter-day Rula Lenskas and Zsa Zsas, famous just for being famous.

Worse, they seldom have anything intelligent to say about the product at hand, preferring instead to throw a few well-aimed jabs at their perceived enemies and competitors, who may also be on the podium. Every once in a while, however, they actually commit to producing hardware or software or whatever, something that's actually going to be compatible with the new wonder gadget of the day. Then you have to ask yourself how deep their resources really are.

Face it. The next version of the software you count on most is probably late. A major reason it's late is divided resources, and the rest is deep-seated confusion over standards.

Maybe we could make some progress if all the CEOs stayed home for 6 months and declared a moratorium on endorsements.

FOR
GROWING
BUSINESSES
EVERYWHERE

DACEASY™ MAKES A WORLD OF DIFFERENCE!

DacEasy™ Accounting.
More Than 400,000 Growing Businesses Worldwide. DacEasy Accounting leads the industry as the number one selling, award-winning program. Two-time winner of PC World's World Class Award and PC Magazine's Editor's Choice, DacEasy Accounting recently was named *InfoWorld's* Product of the Year. Again and again, DacEasy proves that it makes a difference.

In fact, it provides you with more than 700 reports and "what if" forecasting scenarios based on three-year historical information — great for projecting expenditures and revenue. And, in addition to the program, you'll find the 460-page documentation is written for ease of understanding with helpful hints, screens and examples.

DacEasy™. The World's Best Ongoing Customer Support and Training! Disk-based tutorials, FREE Getting Started Support, and a brand new video tutor are just a few of the many products and services Dac offers. Accounting and Payroll Tutors serve as on-screen supplements guiding you through installation to complete set-up with colorful graphics, sounds, primers and examples. And now, you can enjoy at your convenience, DacEasy Accounting Video Tutor, a two-hour VHS tape for a fun way to learn Accounting 3.0. Toll-free Extended Support plans and nationwide DacEasy seminars are also available.

Since its introduction in 1985, DacEasy Accounting, feature for feature, has won acclaim as the leader in accounting software. Now Version 3.0 features a new interface with transaction-oriented pull-down menus that makes it think like you think as a business person rather than an accountant. Readily installed with five quick questions, your business accounting is operating within 10 minutes! Choose the predefined Chart of Accounts that are tailored for service or inventory-based businesses, or modify. All seven modules (General Ledger, Accounts Receivable, Accounts Payable, Inventory, Billing, Purchase Order and Forecasting) are fully integrated. Data posted once is automatically posted to all other related modules saving you time and ensuring accuracy as well.

DacEasy Accounting's strength is its capability for generating reports that provide you with fast information and ultimately better management decisions.

The DacEasy™ 3.0 Series. A World of Difference in Accounting Software.

Naturally, out of the best-selling accounting program grew the need for related business programs such as DacEasy Payroll. The 3.0 version also features a new intuitive design, pull-down menus, flexible pay periods, current federal and state tax tables, automatic withholdings, printing of checks, W-2's and 1099 forms, and much more. It's no wonder DacEasy is the world's best-selling payroll and personnel management program!

Also new for 1988 is DacEasy Graph+Mate, a RAM-resident program that interfaces with DacEasy Accounting or Payroll. Its easy graphic reporting features pie charts, line charts, bar charts, stacked-bar charts and perspective bar charts. Plus custom file viewing, macros, pop-up calculator and notepad, and more make it the ideal companion.

CIRCLE 134 ON READER SERVICE CARD

1 Slash Your Total Development Effort... From Prototyping To Completion

You'll get live results fast—even before you write the first line of code. Ideas become running applications in a few hours.

Designer, the front-end application generator, allows you to produce major programs with *no coding*. It eliminates prototyping as a preliminary step because design and source code generation are done concurrently. You can implement a dazzling color screen or a report in minutes. You'll probably never code a screen again!

2 Automatically Generate Commented Source Code For Your Entire Application

The Professional Developer's Designer is the most powerful application generator in the industry. It creates structured source code that is fully commented. You can easily add to it, modify it, or just admire it.

And The Professional Developer is a complete development environment with all the tools that you need.

3 Create High-Speed, Bullet-Proof Data Management With Built-In LAN Support

Advanced techniques allow you to tune your data management to fit each application. Use related files, data encryption, memo fields, automatic recovery, and commit and rollback—all without compromising Clarion's high level of performance. And complete LAN features are included so the applications you develop will run on your network without any additional run-time or LAN PACK cost.

4 Interface To Your Own C or Assembler Routines For Special Requirements

The Professional Developer will support special device routines and complex logic written in C and Assembler. You won't have to completely re-write all those existing procedures. You can produce completely open-ended solutions that can grow with your needs or requirements.

5 Produce Executable Programs That Don't Need Run-Time Systems

Compile your application into an .EXE program that will run on a stand-alone computer or workstation so you can distribute your programs without costly run-time systems.

6 Get Started Immediately. You'll Be Productive The First Day.

Although there's a lot of horsepower "under the hood," you'll be producing programs soon after you open the package. You'll find the whole environment friendly and comfortable. PC Week says: "Clarion is easy to learn and easy to use."

And One More.

■ JOHN C. DVORAK

CONFESSIONS OF A POWER USER

As part of his therapy, a reformed John C. Dvorak recounts a time in his life when fast was never fast enough, and the search for speed became an overpowering obsession.

It's hard to explain this feeling of illness. It's called Poweruseritis. It can happen to anyone, though some doctors say it's genetic. Indeed, some people do seem predisposed. It wrecks careers. It ruins relationships. And all in all, it turns into a futile exercise in silliness. It struck me last year and I'm still getting over its effects. I may never fully recover.

HOT-ROD REVERIE It began when I decided that a PC AT wasn't good enough. What would it be like, I asked myself, if I had the fastest desktop micro I could piece together? A hot-rod machine. The fastest hard disk, the fastest graphics card, the fastest processor. Michael Dell told me to just use his latest 386; it would be fastest all around. Other vendors said they had this and they had that—all of which were the fastest this and that ever. "You'd better hurry up," said one vendor, "tech writer Steve Satchell is putting together a hot-rod machine too." Not understanding the ill effects of Poweruseritis, which had apparently struck me, I figured he was out to personally embarrass me and my slower machine. There must be others, I surmised. I wrung my hands in a frenzy of paranoia.

Pretty soon it became obvious that no hot-rod machine will be the fastest thing in town for more than a month. Every vendor says it has "something" in the works that will be out next month. As time went by I heard that columnist Jerry Pournelle was trying to piece together a hot-rod machine. Oh no!

I made some calls. Suddenly I was inun-

dated with speed burners. My office was full of them. The Compaq 386, the SIA, the VIP, clones galore. I couldn't ship them back fast enough. At one time I must have had 100 mips (million instructions per second) stacked around the desk. I developed the jitters.

I finally settled on Steve Hui's Everex 20-MHz 386 machine, which just blew all my benchmark tests right off the scale. I equipped it with an OMTI ESDI controller from Scientific Micro Systems, a Control Data Wren drive, a 16-bit Compaq VGA card, and a 9,600-bit-per-second modem. It had to be faster than anything else around, running at close to 5 mips. Hooked up to a Zenith flat-screen monitor, it was a pretty impressive *WordStar* engine. With three different on-line thesauri and 19 TSR utilities I could compute up a real storm. Let's see anybody beat this, I mumbled. The backs of my hands began to itch incessantly.

Then the irony. My thirst for speed had barely been quenched when Steve Hui at Everex said that he would swap out my 20-MHz 386 for a 25-MHz 386 the minute they got some 25-MHz chips from Intel. It should add at least another mip or two, he said. My mouth twitched as I let out a maniacal laugh that echoed in the hallways. I grabbed Hui by the collar: "Nothing can stop me NOW! Hahahahaha!"

POWER USER DETOX That's all I remember. I woke up in a hospital room in the Don Tarbell Clinic. In something of a daze I was slowly weaned off my addiction. At first they'd let me use the Everex at full speed, then they cut the clock speed down further and further until I could eventually be moved to a 6-MHz AT and finally to an IBM PC-XT with a 10MB hard disk. I was reacquainted with an Apple II, an old Commodore PET, and a couple of handmade machines using chips long forgotten. They are my friends. I even loaded a couple of cassette tapes into them. It took a couple of tries.

I left the clinic a few weeks ago, calm, refreshed, and with a brighter outlook on life. I now see that normal people do get true functionality from an IBM PC-XT or an Apple II.

They aren't "idiots who can't keep up the pace," like I used to think. I just have to remember what I was taught at the clinic and what I say in front of my regular weekly group: "I am a Power User. Forgive me. As a recovering Power User, I now know I can fight this disease." Then I drive home in my Nash Metropolitan.

MINUTEMAN[®]

UNINTERRUPTIBLE POWER SUPPLIES

- **Fully Automatic Operation**
- **Order — Ship Same Day**
- **Full One Year Warranty**
- **250 Watt to 1600 Watt Models**

TOTAL POWER PROTECTION

- **Blackouts** — Enables user to operate during complete loss of power.
- **Brownouts** — User is protected from low AC voltage below 102 volts.
- **Overload Protection** — Automatic shutdown in overload situation to protect UPS from inverter burnout.
- **Overvoltage Protection** — UPS runs on inverter (117 volts) when AC voltage exceeds 132 volts.
- **Surges/Spikes** — Clamps transients above 200 volts with an energy rating of 100 joules or less.
- **EMI/RFI** — Three stage filtering for clean AC power.
- **Synchronized Sinewave*** — Eliminates voltage reversal to input or your equipment.
- **1 Millisecond Transfer Time*** — This includes detection and transfer so your machine never notices loss of electrical power.
- **Two Audible Alarm Levels** — Notifies user of battery usage and two (2) minute warning.
- **LED Display** — Informs user of operation mode, power utilized on AC, plus "On Battery" and battery power status.
- **Alarm Silencer** — Enables user to silence alarm for quiet continued operation during battery operation.
- **Optional Signal Port** — Enables UPS to notify computer of loss of AC power to allow computer to backup or shut down.

* 250 watt and 500 watt units offer 4 msec transfer time, PWM wave form.

■ JOHN C. DVORAK

INSIDE TRACK

Action at Lotus abounds as employees sell off stock; Release 3.0 of 1-2-3 delayed. Coincidence?

The industry is abuzz over the sell-off of Lotus stock last February by many of its top executives. If all the facts are correct, there are more than a few interesting observations to be made. First off, who sold what? Jim Manzi, the president, sold nearly 30 percent of his holdings, vice president Palmer True sold 99 percent of his holdings, and Susan Yeomans, another VP, sold 96 percent of her holdings. Edward Belove, VP, sold 100 percent of his holdings and Dan McMillan sold 98 percent of his holdings. I could go on. **Over \$15 million worth of Lotus stock was dumped, or, sold.** That was all in February. On March 23, the company announced it would delay the release of Version 3.0 of 1-2-3 for at least 6 months. The stock took a dive.

The SEC supposedly is looking into this, but Lotus people say the sell-off and subsequent announcements were a **coincidence**. According to one report all this was just a lot of previously executed stock options being sold off for one reason or another. Lotus general counsel Tom Lemberg was quoted as saying that the officers who sold the stock in February **"had no way of knowing that release 3.0 would be delayed in March."** OK, let's give them the benefit of the doubt and believe that assertion.

If that assertion is true, then you have to wonder **what the heck is going on** at Lotus if the progress of its number-one priority project isn't being monitored by the executives who run the company. What are they doing with their time? You also have to wonder what kind of confidence they have in the future to be selling off their stock so **enthusiastically**. I'm sure this activity pleases Messrs. William Gates III and Philippe "Genghis" Kahn to no end as sales of *Excel* and *Quattro*

boom. Once again, it's starting to look like a **new ball game** is emerging in the spreadsheet arena. Remember a company called VisiCorp?

Trying to Cheat Reality Dept.: Recently I got hold of an Atari Mega4. It's the newest version of the 68000-based ST series, but with 4MB RAM. I was sent a program called *PC-Ditto* from Avant-Garde Systems in Jacksonville, Florida. *PC-Ditto* is a software emulator that tells the 16-MHz 68000 chip inside the Mega4 to emulate the 8086's instruction set. **I was shocked** to discover that it worked. Once installed I could shove a DOS diskette into the Atari, boot MS-DOS, and run most PC applications. I noticed, though, the applications ran (putting it mildly) **sluggishly**. So I ran the PC Labs benchmark tests and other test programs on the machine. Most tests saw the emulator as a virtual machine and gave me an accurate indication of its speed as a PC clone. **It was terrible.** It ran at 1/3 the speed of an already lethargic old 4.77-MHz PC-XT. Man, that's slow! Assuming that the 68000 clicking along at 16 MHz is at least as powerful as an 8-MHz 80286 machine, this means that the emulator saps the power of the chip by a factor of about 20 to 1 depending on how you calculate these things. That means the machine is effectively running at 5 percent of its power.

It's hard to tell if the Avant-Garde 95-percent power drain is good or bad. In the past we've not seen emulators for the simple reason that they are **so slow** that vendors won't release them. For all I know, the Avant-Garde software is a screamer. The only other emulators I've played with emulated 6502 code on a Macintosh. No benchmark tests were available to test their efficiency.

This interests me because **emulation** is the key to the potential sales of RISC-based microcomputers in our computer marketplace. If some new cure-all RISC chip claims to be a 10-mips chip, it will be sold as having twice the power of a 24-MHz 80386 chip. This may be meaningless if under 8086 emulation it runs at 5-percent power or .5 mips—the speed of a turbo XT. **This isn't progress, it's marketing.** Get those benchmark test disks out and keep them handy.

While on the subject of marketing. Half of 1987 and most of 1988 has been spent discussing two standard bus architectures: the old PC bus and the Micro Channel or MCA bus. The **current consensus** is that both will live forever and nobody really cares about the MCA bus. The only big-time booster for the MCA bus has been our editor-in-chief and publisher, Bill Machrone, who, because he likes most things that are nifty and new, was **largely ignored**. I've watched this debate from the sidelines, but I see the same old trend. Nobody shows any interest at first, then it's like the formation of a crystal in a chem lab beaker: once a seed is dropped into the liquid, everything changes instantly. The seed, in this case, is Tandy's announcement of an MCA bus. I figure that by this time next year we'll be talking about the old bus in terms of how long it has to live. "A week? Maybe two?" When the market **starts to slide**, you watch them **ball out** of that old bus as fast as they can.

Final Note Dept.: I finally got to play with HP's New Wave graphical interface for the IBM PC. While it may never see the light of day if Apple has its way, let me compliment the programmers at HP for turning the *Windows Executive* into a work of art. This interface is what it's all about. While the metaphor could have been a little less like a Mac copy, the implementation is **spectacular**. It's worth the effort to find someone who can give you a demonstration.

No Matter How It's Protected, Be Sure You Can Back It Up.

Several products can back up protected software. But only two are tough enough to handle even the trickiest protection schemes.

Copy II PC®, for just **\$39.95**, backs up more protected software than any other program. What's more, it can remove copy protection already on your hard disk. *PC Magazine* calls it the "easiest of such programs to use." And now, with our menu-driven Noguard, it's a snap. Copy II PC easily handles Lotus 1-2-3 and over 100 other top-selling programs.

Now removes
Superlok, Everlok and
Prolok copy protections.

For the ultimate solution, try the **Copy II PC Deluxe Option Board**. For just \$159, it gives you the same advanced technology used by commercial disk duplication firms.

PC Magazine reported it "could not find a program this board couldn't handle." It's so powerful, in fact, it even lets you read and write Mac data files in a IBM PS/2 Model 25 or 30, or a PC or AT with a 3.5" internal drive.

No matter how it's protected, be sure you can back it up. For the dealer nearest you, or to order direct, call (503) 690-8090, M-F, 8 a.m. to 5 p.m. (West Coast time).

"There's No Reason To Look Beyond PC TOOLS"

-PC Magazine, Editor's Choice Award, Two-Time Winner

Data Recovery • Fast Hard Disk Backup • Disk Management

Now we've given you even more reason—PC Tools™ Deluxe.

PC Tools Deluxe gives you all the best features of Fastback™, Norton™, XTREE™, Mace™, Sidekick®, Lightning™ and Disk Optimizer—a \$700 value—for just \$79.

Other utilities may claim they "do it all," but only PC Tools Deluxe delivers:

- A **DOS shell** so complete 80 Micro called it their "overwhelming choice based on versatility, ease of use, and cost!" • The best **UNDELETE** available—instead of merely "guessing," it recovers all data even on fragmented files.
- **HARD DISK BACKUP** as fast and every bit as reliable as Fastback. • The leading **UNFORMAT** for hard disks and floppy disks, enabling you to recover from many disk disasters.
- **PCFORMAT** for safe formatting of floppy and hard disks.
- A quick, reliable **DISK CACHING** utility for speeding up disk access.
- A **fast COMPRESS** feature that like Disk Optimizer dramatically improves hard disk performance. • And a better resident mini **WORD PROCESSOR** than Sidekick, including word wrap, search/replace, formatted page printing and more.

Before you buy any of these other utilities, take a look at PC Tools Deluxe. Like PC Magazine, you'll find there's no reason to look any further. For the dealer nearest you, or to order direct, call (503) 690-8090, M-F, 8 a.m. - 5 p.m. (West Coast time).

New Hope for Unsociable Computers.

Just a few short minutes with
CROSSTALK® Mk. 4 can start your PC
communicating with most anyone.

You can open up a world of new possibilities for your PC through our advanced communications software—and you don't have to be a genius to do it.

With a phone line and modem, **CROSSTALK Mk. 4** can get your PC into a dial-up information service like CompuServe® with a single command. Our scripts make it as easy as filling in a few blanks on a screen.

Want to exchange words with other PCs? You can create your own command scripts to simplify and automate entire communications sessions.

When you're ready for bigger worlds, you can break down barriers between your PC and minis and mainframes with **CROSSTALK Mk. 4**. It emulates over 20 popular terminals, supports the most-used protocols,

and helps drive IRMA™ or Smart Alec™ interface boards through a single set-up screen.

For advanced communicators, **CROSSTALK Mk. 4** handles concurrent sessions with multiple devices. Its high-level programming language, CASL™, helps you create customized, menu-driven user interfaces and other applications programs.

As you see, we make communication as simple or sophisticated as you need to get the most out of your newly compatible PC. See your dealer, or contact us.

■ JIM SEYMOUR

386 PCs: REDEFINING THE WORKSTATION

With bigger and better monitors, faster and larger hard disks, and simplified networking capabilities, 80386-based PCs stand a good chance of being the workstations of the future.

Sometimes change sneaks up quietly, gradually taking over and, without our noticing, modifying fundamental aspects of the way we work and the form and function of the tools we use. And sometimes change jumps out of the shadows and bops you on the head, mugging you and altering your life before you realize what's happened.

Both models of change have been at work in the PC business. The rapid *workstationization* of personal computers that has been happening with a quiet inevitability is now coming in a sudden rush.

The April release of Sun's new 386i series hybrid PC/workstation underscored the trend. But the movement was under way long before Sun rolled out the BMW soundalikes.

The term "technical workstation" has been as loosely defined as any in computing. But over the past couple of years, a consensus has formed about what a workstation is and how it differs from a PC.

That emerging definition of a workstation includes a large, high-resolution monitor with graphical displays under a windowing system; a fast, powerful 32-bit microprocessor; at least 2 to 4MB of RAM installed (with the potential to add at least 8 to 16MB more); a fast, large-capacity hard disk; the ability to run the Unix operating system; and the capability to make networking easy, probably by including built-in network connections for a widely used standard such as Ethernet.

Does that sound . . . ummm . . . a bit familiar? Like maybe today's 80386-based personal computers?

CHALLENGING THE MYSTIQUE

The workstation mystique has endured, no matter how well 386-equipped PCs measure up. But look for a moment at just how well the current crop of high-end 386s meet that workstation definition:

■ There's a clear move toward larger, higher-resolution displays for high-end PCs—though for now we've unfortunately stalled out on the so-so Video Graphics Array standard. IBM's new larger, higher-resolution 8514 display will be the next benchmark in display quality. At \$3,000 for the 8514 display and card, it's too expensive to really become a standard, but it will get a lot of attention and accelerate the trend toward bigger, better monitors.

■ A bigger character-only display would be a waste, so a graphical standard for that display is equally important. *Windows 2.0* and *Windows/386* provide that windowing-display glue. The Presentation Manager in OS/2, Version 1.1, will extend that

standard's franchise, despite the stink bombs dropped by Apple's suit against Microsoft and Hewlett-Packard—and implicitly against IBM—over the look and feel of *Windows*.

■ The Intel 32-bit 80386 chip found in current high-end PCs is giving Motorola's 68000-series microprocessors (the dominant choice for workstations) a run for the money. Vendors are supporting the Intel chip with only 1 or 2MB of RAM in base-price configurations, but that's largely a function of the artificially skewed DRAM memory-chip prices we're seeing. Most 386 PCs accept several megabytes of RAM on their motherboards, and all accept substantial additional doses of RAM on plug-in memory cards.

■ Almost every 386 PC is now offered with a large, fast hard-disk option. The 130-150MB CDC Wrens with their sub-20-millisecond access times, supported by ESDI interfaces, are popular choices, and they outperform the kinds of hard disks previously seen as standard for workstations.

■ The Santa Cruz Operation's Xenix, plus Unix products from Interactive Systems, Locus Computing, and others, have become well-respected, widely available operating systems for 386 PCs.

■ And while network connectors built into PCs remain rare birds, the proliferation of plug-in network cards that support every possible protocol and wiring scheme makes networking easier and more versatile with PCs than with most workstations.

Does this mean PCs have turned into workstations? And does that matter?

■ JIM SEYMOUR

It matters a great deal. And not just because, as the cynics will note, workstation-level PCs run \$10,000 and more, while good, fully equipped AT-based clones have fallen below the \$2,000 level.

Until now, the differences in power and function between PCs and workstations forced us to adopt either a sloppy myth or a sloppy desktop. The sloppy myth was that people who needed and used workstations

did nothing but technical computing all day long and had little need of other functions.

The alternative—the sloppy desktop—reflected the reality that people who do technical computing do *many* kinds of work, much of it better handled by MS-DOS productivity programs . . . and so they plopped a PC down on their desks next to the workstation.

Apple has made much of the discovery

■ Apple has made much of the discovery that engineers also write letters and use spreadsheets, hyping the Macintosh II as an all-purpose workstation.

that engineers write letters and use spreadsheets, hyping the Macintosh II as an all-purpose workstation. In truth, the Mac II's a little underpowered as a Unix-driven technical workstation, though it's a lovely productivity machine. But high-end 20-MHz 386 PCs from IBM, Compaq, Dell, ALR, and others make very good dual-purpose DOS/Unix workstations. The new Sun 386i goes a step further.

A WELCOME CONVERGENCE

There's no longer a need for genuine power users to compromise by cluttering the desk with two machines. And we won't need to give up the richness and breadth of sophisticated DOS applications to get the muscle of Unix technical applications in finance, engineering, or science. We'll be able to have both systems on our machines, running simultaneously, and get the best of both worlds.

Which is why the workstation-PC convergence is as welcome as it is overdue. And why the trend toward workstationization of PCs is going to become a very noisy one indeed.

LINK WORLDWIDE OFFICES ON YOUR PC's...

Let Mail-Server communications software create a permanent and vital link between your locations all over the US or all over the globe, using any Hayes compatible modem. Link together headquarters, branch offices and outside salespersons through their PCs, with or without human intervention, even when your mail room is closed for the day. Day and night, Mail-Server collects and delivers your messages and files: it's your full time electronic post office.

... with the ELECTRONIC-MAIL FEATURES ...

Mail-Server creates mailing lists and sends files and messages to multiple locations at once.

Mail-Server maintains distribution lists and delivers mail to multiple mailboxes at the same location.

Mail-Server retrieves E-Mail from remote PC's.

... of MAIL-SERVER INTEGRATED COMMUNICATIONS SOFTWARE.

Mail-Server features automated, unattended, background, remote communication; terminal emulation

and much more!

Mail-Server's encrypted, multi-level passwords restrict remote access to your data.

Mail-Server, brought to you by 3X, a leading European software manufacturer, has been specially designed to accommodate differences in international phone systems.

AUTOMATICALLY and UNATTENDED

With Mail-Server, all communications tasks can be executed AUTOMATICALLY and UNATTENDED, whatever PC application is running at the time. CALLS can be scheduled to take place, UNATTENDED, at a pre-scheduled date and time, or every day, at the same time, when phone rates are at their lowest.

For \$195, Mail-Server lets your company use its PC's to enter the era of distributed information.

For additional information call 3X USA today to build your company's global network.

COMPLETE 12 MHz ZERO-WAIT 286 SYSTEM WITH 32MB HARD DRIVE!

Can you believe it? *Yes you can!*

32 MB hard drive. 12 MHz ZEOS Wait State. Fully AT compatible. Our *complete* 286 system ready to plug in and fly right out of the box! At the amazing price of only \$1,295!

How is it possible? By buying direct from the manufacturer that's how. ZEOS International offers you the finest, best-backed fully AT compatible systems available... at *factory direct* prices.

We think you'll agree, this is the very best value you'll find anywhere.

And every ZEOS® system is fully assembled, burned-in and tested in our own laboratories. We would like to build one for you. Give us a call today!

OTHER ZEOS OPTIONS:

- Basic System Only: Everything except a hard drive. \$995
- Complete 60 + MB hard drive system! Only \$1,595
- EGA Upgrade. 14" EGA color monitor with ZEOS EGA card. Fully tested. Add \$495
- Many other drives and options available. Call Toll Free for details, 800-423-5891.

ZEOS® Customer Assurance Program

Compare not only our features but the ZEOS® Customer Assurance Program as well: 1. Full refund within 30 days of shipment if you are not absolutely satisfied. 2. One full year limited warranty on parts and labor. 3. Federal Express replacement of any failed parts for your first year of ownership.

STANDARD FEATURES INCLUDE:

- 12" High Resolution Amber Screen TTL Monitor with Tilt & Swivel base. Easy on the eyes!
- 80286 CPU Zero-Wait State Motherboard with 8 I/O slots and socket for 80287 Math Co-processor.
- 6/12 MHz Dual Speed, Keyboard Selectable, Zero Wait-State. Phoenix BIOS!
- Deluxe AT-style Case, Security Keylock, Reset Button, LEDs.
- Full 101 key AT-style Keyboard, Mechanical Tactile with Pleasant "Click" Feel.

ONLY
\$1,295⁰⁰

NEW! ZEOS® 386 Motherboards!

ZEOS® 80386 motherboards, 16 or 20 MHz, Zero-Wait state. Up to 16MB of 32-bit memory on board. Plus on board options include Wait-tek 1167 Math Co-processor, 80387, 80287, FDC and SCSI HDC. Ideal for upgrades and OEM systems. Only \$1395.00

- Heavy Duty 200W Power Supply.
- Real Time Clock/Calendar with Battery Backup.
- 512K, 80ns Memory expandable to 1MB on the Motherboard.
- Hard and Floppy Drive Controller.
- Serial and Parallel/Printer Ports.
- 1.2 MB High Capacity Floppy Drive.
- 32MB hard drive.
- High Resolution Monochrome Graphic Card.
- FCC approved.

Perfect running

It's no contest. Funk's 1-2-3® performance software helps improve your 1-2-3 productivity better than any other software you could possibly track down.

That's because each one is in perfect step with 1-2-3. With menus and commands like 1-2-3 itself. And with

Sideways.

The most widely used
printing software
in the world.

Sideways® has always been the one software to turn to for print-

ing spreadsheets that are too wide for your printer. It turns text on its side as it prints. So no matter how many columns you put in your spreadsheet, you get them all back out in one continuous printout. Without staples, glue or tape.

Create presentation-quality printouts that look just the way you want them to. Highlight ranges with bold, underlined, and expanded type. Choose from nine different type sizes, from minuscule to mammoth. Print through or skip over perforations. Add borders, change page size, adjust margins any way you like.

You can run Sideways right from your 1-2-3 or Symphony menu. Just highlight a range and print.

Plus, Sideways is the right way to print with all your other software, too. Including databases, word processors, project planners, even other spreadsheets. And it prints with all popular dot-matrix printers, as well as the LaserJet Plus/Series II.

"Sideways is such a fundamental improvement in spreadsheet printing that I find it hard to imagine using 1-2-3 without it."

PC MAGAZINE

InWord.

Full-function word processing
that runs inside 1-2-3.

If you need to create letters, memos, or reports that include data from your spreadsheet, you need InWord.™

InWord is just a keystroke away from 1-2-3. So you don't have to jump through hoops to put spreadsheet data into a document.

Create live links to data in your spreadsheet. When you change the spreadsheet, the changes appear in the document automatically.

And Inword's powerful formatting features rival the best stand-alone word processors. InWord fully supports the capabilities of your printer, whether it's a 9-pin dot-matrix or an HP LaserJet. You can mix pitch and typefaces freely, and even print in proportional type with full micro-spaced justification for the ultimate in print quality.

"Of all the 1-2-3 word processing add-ins, InWord is the cleanest, fastest, easiest to use." PC MAGAZINE

With InWord, automatic mailmerge is as easy as selecting a range from your 1-2-3 spreadsheet database.

InWord gives you instant spreadsheet integration, plus powerful formatting and typesetting controls

partners for 1-2-3.

powerful functions and features that take up right where 1-2-3 leaves off.

So don't wait. Dash out to your favorite software store and ask for them by name. Or order directly from Funk Software.

The Worksheet Utilities.

It brings out the power user in anyone.

The Worksheet Utilities™ is a collection of powerful tools that will change the way you work with 1-2-3.

File Manager is a powerful disk organizer that lets you describe, catalog, archive, copy, move, erase, rename, and compress worksheets and other files, all from within 1-2-3.

Print Settings lets you see all your print settings on a single screen, create different print settings for different jobs, and select print styles like "17 pitch" and "landscape mode" from a menu customized for your printer.

Formula Editor provides a powerful environment for entering, editing, and debugging formulas, with point/shoot menus for @ functions, prompting for arguments, and an on-line @ function reference manual.

Search and Replace lets you hunt through your spreadsheet for labels, values, @ functions, and cell references—and optionally replace them.

AutoSave creates periodic back-ups of work-in-progress, to guard against power failures and editing mistakes.

"Indispensable... a stunning set of utilities... the Formula Editor is simply beyond belief." PC WEEK

Noteworthy.

The software that remembers. So you don't have to.

Noteworthy™ is the professional cell-annotation and documentation software that lets you tell the story behind the numbers, formulas and macros in your spreadsheet.

Want to remember why you put what you put in a cell? Just press the hot-key and you pop a blank note. Then type away using Noteworthy's powerful built-in editor. Make as many notes as you need, each one up to 8000 characters long. Copy text from a note to a spreadsheet. From a spreadsheet to a note. Or from one note to another.

It even reminds you where you put your notes. As you move through your spreadsheet, an indicator lights up whenever you land on a cell containing a note.

"The simplest, most effective, and the most customizable way to attach notes to spreadsheets."

PC MAGAZINE

With Noteworthy, neither you nor others who use your spreadsheets need ever forget the true meaning of a cell.

■ STEPHEN MANES

EXTENSION COURSE: FILENAMES FOR THE FUTURE

33RDAND.LEX? POWER.USER? WHATSTHE.DIF? Some claim the DOS file system is woefully inadequate and hopelessly out of date. But old habits die hard . . .

Half the PC users on the planet whine and moan about how you can call Macintosh files anything you want from "Nasty Letter About Morton Downey" to "My Soothing Windham Hill Collection," while the IBM world is stuck with names like GEEK4.YUK and WINSTON3.AAH. But Joe Astute, my source who wears those "Get Ossified" T-shirts, tells me help is on the way. It's a fairly low priority until Presentation Manager rolls out the door with fewer bugs than a recumbent elephant, but OS/2 will one day include a real file system on top of the toy one we've got now.

But hey, after years of doing things one way, do you toss cherished customs out the window? Do you fiddle with the strike zone? Do you change the balk rule? What's wrong with tradition, anyway? DOS filename rules are part of our computer heritage, a precious legacy from CP/M. Must we throw these lovable babies out with the dirty DOS bathwater?

I think not. Fortunately for those of us who care about our roots, a certain computer company has given our cause a boost. By copyrighting the use of descriptive filenames anyone can understand, it has precluded their use by anyone unwilling to pay a license fee of a dollar a filename (before quantity discounts)—thereby throwing a monkey wrench into the OS/2 scheme. Fortunately, an even bigger computer company has proposed an entirely new way of looking at eight-dot-three filenames—one that will work fine with OS/2 and yet maintain compatibility with the DOS we know and love.

FOLLOW THE DOT I refer, of course, to the Strongly Typed International Filename Format 8.3 (STIFF 8.3), which was developed years ago but never implemented. Fully SAA-, SNA-, LU 6.2-, OS/2-, DOS-, and cable-compatible, STIFF 8.3 lays down precise rules for filename extensions, thereby letting all users instantly and precisely determine what kind of data is in a file merely by perusing the three characters that follow the dot.

Earlier versions of the STIFF protocol were hampered by being out of touch with DOS reality. The key to the widespread acceptance of the newly revised STIFF 8.3 is that it recognizes and locks in forever such accepted DOS filename extension conventions as these:

.ARC File compressed to avoid your wasting 40 days and 40 nights transmitting or using it.

.BAK A protective file destined for deletion before you really need it.

.BAT Telltale hidden file cleverly created by baseball game to let the boss know you were playing when you should have been working.

.BIN File created by wine list program; bad years are deleted automatically by system.

.COM A "Common" program file that can actually fit into 64K of memory and is therefore offered at a bargain price.

.DBF "Debased" file; contains only corrupted information.

.DEF A system warning that the disk it appears on is defective.

.DEV File containing satanic cult messages that can hold your hard disk in thrall.

.DOC "Eliza" program to diagnose and cure associated software when it behaves erratically.

.DYN Lotus 1-2-3 template for creating personal ratings of fine restaurants.

.EXE A fancy "executive" program virtually unlimited in size and therefore commanding hundreds of dollars more than the "common" one that does the same thing.

.HEX Another one of those devil-worshipping viruses likely to screw up your hard disk.

.HLP A file begging to be put out of its misery.

.INC File containing sensitive encrypted corporate data.

.INI Filetype used exclusively with programs that employ "spaghetti code"; for example, CAPELL.INI, TORTELL.INI, LINGU.INI.

.INX Configuration file specifying what color pens a plotter should use.

■ STEPHEN MANES

.KEY The password that opens the gates to all your other files. (Under STIFF 8.3, this must be kept in the root directory to obviate user forgetfulness.)

.LBR "Labor" program file that can

clash severely with .EXE files.

.LIB File converting offensively chauvinistic "sexist" language to "non-sexist" terminology.

.LOG File that produces an essential

part of the Frogger game display.

.MAC A special form of .INI files.

.ME A file containing absolutely essential last-minute instructions no one bothers to read.

.MSG A file that can produce terrible headaches for many users; delete if you're sensitive.

.OBJ "Objection" file; includes a vast variety of complaints about the bugs in a particular program.

.OVR Self-modified file signifying that its useful life is "over" and therefore ripe for deletion.

.PRN File containing highly charged sexual imagery; keep away from children.

.RPT "Repeat" file that contains a boring version of information duplicated elsewhere.

.SCR "Screw-up" file reporting program problems.

.STY File included with application software by certain disgruntled programmers to secretly indicate that the accompanying program is a real pig.

.SYN File that works insidiously in tandem with .DEV files to trash your hard disk.

.SYS File requiring knowledge of secret password to display covert feminist message.

.WK1 Spreadsheet template that works just once.

.WKS Spreadsheet template that works some of the time.

.007 File created from lost clusters; reconstructing it requires the espionage talents of James Bond.

.\$\$\$ File indicating a programmer's engagement in wishful thinking.

I wish I had space to list all the wonderful new filetypes designated under STIFF 8.3. If you can think of it, there's an extension for it. Early-childhood programs? Use

.GOO. Expense account data? An obvious

.LIE. There's even .DIM—expressly for articles daring to poke fun at a certain large computer company.

And there's no doubt in my mind: STIFF 8.3 will instantly become the all-encompassing industry standard. Ignore all those pundits who keep predicting great things for the nine-character-dot-four-character or even wilder formats. Believe me: such things are about as likely as lights in Wrigley Field.

The United States Senate Used askSam To Manage Every Word Of The Iran-Contra Hearings.

When The United States Senate Select Committee compiled the volumes of testimony and evidence during the Iran-Contra hearings, they used askSam to manage every word.

The system stored, searched for and quickly retrieved even the most obscure detail, text or numerical, with unparalleled speed and ease of use—without the crippling restrictions of the average database. It's this unique, versatile "free-form" design that makes askSam's Version 4 the perfect system to manage all of your information.

From sales leads to research notes, financial lists to videotape collections, askSam keeps all your information at your fingertips.

Easy Entry, Swift Retrieval.

askSam includes the most advanced data entry and retrieval features available, like our full-screen text editor for easy addition of new records with or without formal definition of fields. Or you can use our ASCII-import facility for importing word processing or database files.

The Information Manager.

askSam's full-featured system makes it versatile enough to handle any amount of information for any particular need.

Power-users will appreciate innovative numerical capabilities, report generators (up to 160 columns wide) and field manipulation as

You Can Use askSam To Manage Your Information.

well as askSam's command language, security features and automatic phone dialer.

If you're not a power user (yet) askSam offers extensive context sensitive, on-line help screens whenever you need them—wherever you are.

askSam's Hypertext Facility.

With askSam's powerful hypertext facility, you can easily create menus of askSam files, programs and much more.

Money-Back Guarantee.

We'll give you 60 days to see just what askSam can do—and how it can manage your valuable information—for just \$295.

Who Says FoxBASE+ is Better than dBASE®?

The Experts!

The Best Just Got Better—Now Shipping New FoxBASE+ Version 2.10!

Nicholas Petreley, InfoWorld Review Board:

"FoxBASE+ has outdone itself. Once again, FoxBASE+ earns an 'excellent' in performance, with kudos for responding to user suggestions. For sheer productivity, there is no other choice." *InfoWorld* "Editor's Choice" for 1987 and 1988!

P.L. Olympia, Founder & President, National Dbase Users Group / Government Computer News:

"FoxBASE+ is a supercharged dBASE, with all the features Ashton-Tate forgot. If you're into serious dBASE development and have not tried FoxBASE+, you are living in the dark ages and wasting your company's money."

George F. Goley IV, Cont. Editor, Data Based Advisor:

"The product is fast, very compatible, fast, easy to use, fast, relatively inexpensive, and very fast. In every test, FoxBASE+ outperformed the other products. And people who answer the phone at Fox know what they are talking about."

David Irwin, Former President/CEO, Data Based Advisor:

"From the dBASE compatibility standpoint, FoxBASE+ is flawless. From the speed standpoint, FoxBASE+ is unbelievable. From the 'lazy factor' standpoint, FoxBASE+ is perfect."

Glenn Hart, Contributing Editor, PC Magazine:

"Initial tests of FoxBASE+ were simply stunning. In many ways, FoxBASE+ gives you the best of both worlds: all the benefits of interactive development and debugging, plus the speed and code protection of a compiler."

Adam Green, Contributing Editor, Data Based Advisor, dBASE Author:

"For the PC, FoxBASE+ has consistently set the performance standard for dBASE compatible languages. For the Macintosh, FoxBASE+/Mac will set standards for innovation and leadership in a new dBASE implementation."

Don Crabb, Contributing Editor, InfoWorld:

"You can expect blazing speed on the Mac. FoxBASE+/Mac breezes past tests that have proven stumbling blocks for Macintosh databases in the past. FoxBASE+/Mac combines complete dBASE compatibility with a genuine Macintosh user interface."

This is what they said about Version 2.00 of FoxBASE+. Imagine what The Experts will say about New Version 2.10 with these added features: Menu-Driven Interface, Program Documentor, Screen Painter and Template-Based Application Generator... and Version 2.10 is even faster than 2.00!

Join The Experts. Get your copy of the New FoxBASE+ Version 2.10 today! Now available at your nearest, quality software retailer, or directly from us by calling (419) 874-0162 Ext. 760.

Because, when it comes to speed, compatibility and value, nothing runs like the New FOX—Version 2.10!

Introducing the in power

Flip down door covers 3-1/2" diskette storage pocket and stand.

Advanced protection for today's computers.

Today's generation of personal computers are more powerful and can process greater amounts of information faster than ever before. Consequently, electrical surges can now destroy more expensive equipment and larger amounts

of data. That's why we built Power Director III. The first of its kind specifically designed to protect today's computer systems. Like IBM PS/2 and Macintosh II computers.

The performance leader.

Since 1982, when we introduced the original Power Director, Computer Accessories Corporation has been the forerunner in power

protection for microcomputers. Many years of surge suppression and design experience have led to the development of Power Director III.

Power Director III's unique "Sine Wave Tracking" technology closely monitors incoming power with a guard band that clamps surges and spikes. Instantaneously.

Before they can

damage your computer system. Power Director III also meets rigid UL and IEEE 587 Category A and B surge protection performance standards assuring that your system and data are safe from common electrical disturbances and line noise interference. And even static electricity. Power Director III includes these performance features:

- UL Listed
- IEEE Category A and B
- High performance noise filter
- Advanced surge suppression
- Static protection
- Sine wave tracking

next generation protection.

Touch our nameplate and your system is protected from static electricity.

LED indicators show status of power and surge protection.

Director® III.

Built for your convenience.

Power Director III lets you switch on every peripheral and your computer with the push of a button. Saving you the hassle of fumbling for switches.

And Power Director III comes with a free built-in 3 1/2" diskette storage pocket and diskette stand to keep your disks organized and at your fingertips.

Designed for future growth.

Power Director III's storage pocket can be converted easily into other productivity enhancing devices. Such as a data switch for economical peripheral sharing. Or a print buffer to enhance printing ease. And no other surge

suppression and power control center affords you this expandability.

Protect your investment.

Pick up the latest generation surge suppression and power control center today. Power Director III. Before a surge can put your system out of business. For the dealer nearest you, call 1 (800) 582-2580 or in California, 1 (800) 582-0852. Ask for extension 501.

The Cure for MacEnvy.

For years PC users have been conditioned to think of their computers in certain terms. Dependable. Versatile. Dull. To get superior graphics, some claimed that you need a different type of computer altogether. They said *their* computer was everything the PC wasn't. Easy to use. Graphically exciting. Fun. PC owners were, well, *green* with MacEnvy.

Enter Micrografx.

With the Micrografx family of applications, you don't have to trade in your PC. Micrografx software turns your computer into a complete graphics studio for desktop design, publishing, and presentations.

Allow us to illustrate.

Micrografx Designer lets you go from rough concept to finished art, giving you the power to bring your ideas to life. Micrografx Graph Plus™ is packed with easy-to-use charting features for the business user. Micrografx Draw™ gives you control and simplicity in

a basic drawing program. And Micrografx software supports hundreds of printers like HP's LaserJet™ and PaintJet™. All PostScript™ devices, too.

And there's more. Micrografx ClipArt™ libraries contain volumes of professionally designed symbols and illustrations. Micrografx Convert™ translates between the PIC and DXF file formats.

So take a bite out of the argument that PCs can't do superior graphics, and get the cure for MacEnvy. Ask your dealer for a demonstration or call us for more information.

Micrografx. The picture of success.

NEARING
PERFECTION

VGA BOARDS

ENTER the MAINSTREAM

Until a few months ago, getting true VGA graphics meant biting not just a budgetary bullet but an entire artillery shell and buying a Micro Channel PS/2. The only alternative, trying to upgrade a PC, XT, or AT to the new video standard, was chancy at best. The first crop of VGA video adapters for the PC family failed to guarantee completely interchangeable functionality with the new IBM standard because those boards embodied only BIOS compatibility. That is, they recognized the same machine language instructions that were used by the PS/2 VGA BIOS, but their circuitry was quite unlike that of the IBM product. While they promised the same resolution and color capabilities as the IBM VGA system, when programs dipped below the BIOS to take direct control of the hardware, the early adapters could miss their cues.

Even if your budget precludes the purchase of a new PS/2, you needn't be stuck with last year's video technology. With any one of these low-cost VGA boards, you'll get the most dazzling colors and highest resolution yet available.

The nine new video adapters from Everex, Intelligent Data Systems, Orchid Technology, Paradise Systems, Sigma Designs, Tatung, Taxan, Tecmar, and Video Seven examined here show the next step in bringing the VGA standard to PCs,XTs, and ATs: register compatibility. Not only do these video boards know and understand all of the IBM BIOS commands, but they can also be controlled at the hardware level through their registers. (A register is a special kind of silicon storage that allows video chips, microprocessors, and the like to remember numbers and settings during their calculations.) Register compatibility means that your software can bypass the BIOS to take direct control of certain hardware facilities of the VGA board. The advantage of register compatibility is that it lets your program skip the BIOS routines and the overhead they impose, thus bringing improved performance—snaz-

■ VGA BOARDS

zier colors, new video modes with more characters on the screen, faster text and graphic displays, smooth dot-by-dot scrolling—40 software that takes advantage of them.

More than that, many of these video adapters promise better-than-VGA performance. Some offer 1,000-line-plus resolution; many multiply the color selection available at higher resolutions. They bring the best video yet to your PC's screen. Of course, you'll need special software drivers (which may support a limited array of programs) and a MultiSync-style monitor to take advantage of many of these super-resolution modes.

Besides the nine boards reviewed here, two other products claim hardware compatibility with the VGA standard: Compaq Computer Corp.'s Video Graphics Controller Board (\$599), and IBM's PS/2 Display Adapter (\$595). Both were reviewed in "VGA Compatibles: Gaining on the New Standard" in the February 16, 1988, issue of *PC Magazine*, in which the Compaq board, with its 16-bit bus interface and fastest memory access speed, was chosen as Editor's Choice.

TWIN TRENDS Take a close look at these nine boards, and you'll see two trends emerging in VGA design. Some engineers are attempting to craft exact clones of the IBM VGA products, alike in all details and capabilities, and limiting their use solely to VGA and VGA-compatible MultiSync-style monitors. Others are aiming at the universal, endowing their products with the ability to plug into nearly any standard display.

The former adapters presume you'll never want to use anything less than a 31.5-kHz fixed-frequency VGA monitor. The latter boards let you get VGA compatibility today without forcing you to buy a VGA display; these adapters will work with whatever monitor you have. Later, as your budget allows, you can upgrade your display without tossing out your video board.

The supported standards include the one used by the IBM Monochrome Display Adapter (MDA), the Color/Graphics Adapter (CGA), the Hercules Graphics Adapter, the Modified CGA capabilities of the PS/2 Models 25 and 30 (MCGA), and

the Enhanced Graphics Adapter (EGA). None of these video adapters support composite input monitors: those using RCA-style connectors and having limited bandwidth. There are distinct differences, however, among the downward compatibilities of the VGA boards that support many standards. Some are only BIOS-compatible with earlier video standards, while others are register-level-compatible with them.

The unexpected downside to these backward-compatible boards is that, with the exception of the Sigma Designs VGA/H, they lack one essential ingredient of true VGA hardware compatibility: precise plug compatibility with the IBM VGA Video Feature Connector, the promised gateway to as-yet unnamed, unannounced, and unspecified add-on IBM accessories.

Nothing about these backward-compatible boards precludes the use of an IBM-style VGA Video Feature Connector. The omission is probably partly coincidental and partly because many engineers chose to offer EGA-style expansion for compatibility with existing (rather than ethereal) enhancements.

While the IBM-clone VGA boards generally give you just one connector—a DB-15 that matches the jack on the back of the PS/2—the backward-compatible VGA boards give you two. Like the other boards, they include a DB-15 that supplies analog signals to match VGA-style monitors and a DB-9 with digital signals to fit the previous standards. When you have your choice, for instance, with a MultiSync-style display that supports both analog and digital inputs, choose the former. IBM digital interfaces restrict your color choices to 64, while analog signals can put a virtually unlimited spectrum on the screen.

BETTER THAN EVER Each of these VGA adapters represents a substantial engineering achievement, notwithstanding its falling short of perfect VGA compatibility. All will bring more colors and sharper images to your PC, better than any previous video standard. Although you might still find minor compatibility problems, most of these boards should perform flawlessly with nearly all available VGA

software. And with any one of them you won't have to put your PC out to pasture to see real VGA greens.

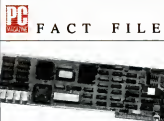

EVEREX SYSTEMS INC.

Everex EVGA

With its EVGA board, Everex pushes the maximum resolution you can expect from your MultiSync-style monitor up to an almost unbelievably sharp 1,280 by 600 pixels in four colors, without sacrificing VGA hardware compatibility. In addition, the \$399 EVGA delivers backward compatibility with all standard video modes, including Hercules Graphics, and all standard monitor types. The EVGA will even drive two monitors simultaneously, albeit with the same image.

Fitting all those features takes a lot of logic. Mixed among the 13.3-inch EVGA card's DIP logic chips are four major VLSI chips, all Everex proprietary products, an Immos DAC, and 256K of 100-nanosecond RAM.

TWO MONITORS Both analog/digital DB-9 and analog DB-15 connectors are available, and Everex okays simultaneous

• Yes □ No

use of both. You can plug in two different types of monitors—one into each connector (with some limitations)—and the EVGA board will produce the optimum image for each. Everex notes, however, that on-screen images may be dimmer due to the double termination (loading) of the EVGA's outputs.

The only thing lacking from the EVGA hardware is a VGA-style Video Feature Connector. In its stead, Everex has installed a 20-pin header with the same pin-out (but not the same form factor) as that of the Micro Channel architecture video bus extension.

An array of jumpers and an eight-bank DIP switch, accessible through a retaining bracket cutout, are used to set up the EVGA. One bank of jumpers changes the DB-9 connector from digital to analog outputs. Other jumpers alter the base address and interrupt used by the board to avoid

conflicts with other system enhancements. The DIP switches select the boot-up mode and type of monitor being used with the board. Color or monochrome VGA-style monitors plugged into the DB-15 connector automatically override these settings and set the jack to the output mode the monitor requires.

The EVGA has a limited automatic mode-switching ability. It can sense which display mode the software requires and attempt to match its function in its circuitry. However, Everex notes that sometimes this process is not entirely effective—for instance, when switching from Hercules to EGA modes. Consequently, Everex recommends using a special utility supplied with the board, EVGAMODE, for altering the operating mode of the board when moving between programs that ostensibly require different video adapters. The EVGA will, however, emulate Hercules-

style graphics on otherwise incompatible monitors.

ENHANCED EGA MODES Besides the VGA and underlying standard modes, the EVGA also has several "enhanced EGA" modes, including three 94-column text modes (with 25, 29, or 51 rows), three 100-column text modes (with 37, 43, or 75 rows), and ten 132-column text modes (with 25 or 44 rows and various character matrices). Extended graphics modes include three using 256 simultaneous colors (512 by 480, 640 by 350, and 640 by 400 pixels), two 16-color modes (752 by 410 or 800 by 600 pixels), and two super-high-resolution four-color modes (1,280 by 350 or 1,280 by 600 pixels).

Using these advanced modes requires a MultiSync-style monitor and may require special driver software. Everex supplies drivers for AutoCAD and Lotus 1-2-3 (Re-

VGA Add-in Board Architecture

VGA-compatible display adapters are designed to let you update the graphics capabilities of your existing PC, XT, or AT, allowing your system to display up to 256 colors from a palette of 262,144. The architecture of these boards, like that of the Sigma VGA/H shown here, supports register-level compatibility with the VGA standard. Many of these 8-bit

boards feature both DB-9 and DB-15 connectors and also support a proprietary video mode that lets them deliver resolution that goes beyond VGA's 640 by 480 in 16 colors. Some, like the Sigma VGA/H, sport the VGA Video Feature Connector. With the exception of the full-length Everex EVGA, all of the boards evaluated here are half-length.

The Sigma VGA/H

100-nanosecond DRAM chip

The 256K of socketed 100-nanosecond DRAM is used to display text and images and speed up screen refresh time.

VLSI video chip

The VGA chip set, in this case from Tseng Labs, is a large VLSI chip that implements video circuitry control of the system's graphics controller.

VGA Video Feature Connector

The VGA Video Feature Connector, which is analogous to the feature connector found on EGA and EGA-compatible boards, is a port that allows for future enhancements to the display adapter board.

Inmos DAC

The Inmos Digital-to-Analog Converter (DAC) chip lets the board share digital and analog signals.

Oscillator chips

Five oscillator chips control the different clock frequencies that the board uses to handle each different video mode.

VGA BIOS chips

The VGA BIOS chips support the functions of the VGA registers.

8-bit bus connector

The 8-bit bus connector fits into both the 8-bit and 16-bit slots on the IBM PC, XT, and AT computers and compatibles.

Paradise's connector

The Paradise VGA Plus Card, on which the Taxan Ultra-Grafix VGA Model 580 Card is modeled, offers only a single DB-15 connector at the rear of the board. However, Paradise does supply a 15-pin-to-9-pin connector, which allows the board to support Hercules, MDA, and CGA modes and to work with many styles of monitors.

Taxan's VGA Video Feature Connector

Taxan uses a finger-type connector for additional features similar to those offered on the Sigma board. These types of connectors do differ, though, as you can see with the Video Feature Connector available on the VEGA board.

Tecmar's DAC from Brook Tree

Conspicuously absent from the Tecmar VGA is the standard Immos DAC, which is used by IBM VGA and its clones. Instead, the Tecmar VGA uses a smaller DAC from Brook Tree.

Sigma's four-position DIP switch

The four-position DIP switch allows you to change the board's video mode.

DB-15 connector

The DB-15 connector, which matches the jack on the PS/2, supplies analog signals to match VGA-style monitors.

DB-9 connector

The DB-9 connector supplies digital signals to match previous video standards, including MDA, CGA, and EGA.

The small footprint of the eight RAM chips (256K) on the Video Seven VEGA VGA shows an economy of design. Above the RAM chips is a female multipin feature connector.

■ VGA BOARDS

lease 1A). In addition, a font-loading program, FONTLOAD, with 22 downloadable fonts is included.

The Everex EVGA passed all of the PC Labs VGA compatibility tests with the exception of direct writes in modes 7 and 15.

The strengths of the Everex EVGA are its very high compatibility and many enhanced EGA modes. Although it would benefit from a greater number of drivers and, perhaps, simplified setup, it nevertheless ranks as a good VGA alternative.

INTELLIGENT DATA SYSTEMS INC.

Intelligent VGA Board

Intelligent Data Systems calls its product the Intelligent VGA Board not just to echo the company name, but also to highlight one of the board's more-advanced features: it automatically adapts software images designed for one display to match whatever you have. Among those abilities, the \$445 Intelligent VGA can put CGA graphics on a TTL monochrome display and EGA graphics on CGA displays. Beyond the standard 17 VGA modes, the Intelligent VGA can also generate 16-color graphics with resolutions up to a maximum of 800 by 560 pixels.

Seven inches long, the Intelligent VGA combines Chips and Technologies' VGA chip, an ATI Technologies VLSI circuit for its more-arcanic any-graphics-on-any-display abilities, and an Immos DAC. The board also includes 256K of 120-nanosecond RAM soldered to the board. Expansion is possible through the Intelligent VGA's EGA feature connector.

Physically, the Intelligent VGA bears more than a superficial resemblance to Tatung's Platinum Card, and it also mimics Tatung's compatibility with various standards. Although the Intelligent VGA is BIOS compatible with the IBM VGA standard, it is not 100-percent register-level-compatible. The Intelligent VGA also claims hardware compatibility with the EGA standard as well as BIOS compatibility with the MDA, CGA, and Hercules Graphics Cards. With a special adapter board, it will also drive the internal displays of Compaq portable computers.

The Intelligent VGA mates with both analog and digital displays through the fe-

male 9-pin and 15-pin D-shell connectors on its retaining bracket. In addition, an output for an RF modulator is also available as a header on the board itself.

AUTOMATIC CONFIGURATION

While the Intelligent VGA automatically configures itself for VGA-style displays, an eight-bank DIP switch that can be adjusted through a cutout in the bracket must be set to match MultiSync-style and digital monitors. Of the six sets of jumpers that line the edge of the Intelligent VGA card opposite its retaining bracket, only one, which sets the base address of the card to one of two values, is documented.

Besides supporting all current IBM video standards, the Intelligent VGA offers eight modes of its own. Text arrayed 132 columns by 25 rows is available on all but analog VGA monitors in 2 or 16 colors. Text arrayed 132 columns by 44 rows is available for all monitor types except VGA, CGA, and Portable Personal Com-

puter internal displays, also in 2 or 16 colors. In addition, the Intelligent VGA features two 800- by 528-pixel modes (16-color graphics and 80-column by 66-row text in 16 colors), text 80 by 33 columns in 16 colors, and 800 by 560 graphics in 16 colors, all of which will require a MultiSync-style display.

To complement those modes, Intelligent Data Systems includes two disks of software. On them you'll find a control program for manually shifting video modes that also features a built-in screen saver to blank your monitor after a predetermined period of system inactivity. Drivers are supplied for the following applications: *AutoCAD*, *Microsoft Windows*, *GEM*, *Ventura Publisher*, and *Lotus 1-2-3* (in 132-column text mode).

SLOW BIOS As might be expected, the Intelligent VGA performs nearly identically to the Tatung Platinum Card—both registered some of the slower speeds in the PC Labs performance and benchmark tests. The Intelligent VGA passed most of the PC Labs VGA compatibility tests. It failed the direct writes test in mode 13, and its video and CPU clocks were out of synch. Not far off the mark in terms of VGA compatibility, the Intelligent VGA can be used effectively in any system with any monitor, except in hardware-critical applications.

ORCHID TECHNOLOGY Designer VGA

Anything that you buy today, you take with the full knowledge that you have one foot in obsolescence and the other on a greased banana peel. Orchid Technology can help you avoid that backward-slipping feeling with its Designer VGA. Offering more than just register-level VGA compatibility, the \$445 product is fully backward compatible with all monochrome and color video standards. Moreover, it sneaks beyond the VGA specification with up to 256 colors at 640 by 480 resolution and ultimate capabilities of up to 1,024 by 768 pixels in 16 colors on interlaced displays.

What the Designer VGA is not is strictly VGA-hardware compatible. The 6-inch card lacks a VGA-style Video Feature Connector—or any expansion connector

Intelligent VGA Board
Intelligent Data Systems Inc.

6319 E. Alondra Blvd.
Paramount, CA 90723
(800) 325-2455
(213) 633-5504

List Price: \$445

Requires: PC, XT, AT, or compatible, or PS/2 Model 30.

In Short: Both register compatible with the VGA standard and backward compatible with previous standards, this 7-inch board can generate 16-color graphics with resolution up to 800 by 560 pixels. One of its strengths is automatically adapting software images designed for one display to any display you have.

CIRCLE 696 ON READER SERVICE CARD

Get your work done before 1991.

The future of personal computing is clear. More powerful PCs. Easier to use PCs. With graphics and character-based programs working side by side. Talking to each other. Multitasking. Windowing. Mousing. Getting your work done easier and faster.

Have it all now.

DESQview™ is the operating environment that gives DOS the capabilities of OS/2.* And it lets you, on your trusty 8088, 8086, 80286, or 80386 PC, leap to the productivity of the next generation. For not much money. And without throwing out your favorite software.

Add DESQview to your PC and it quickly finds your programs and lists them on menus. So you can just point to the program, using keyboard or mouse, to start it up. DESQview knows where that program lives. And what command loads it.

For those who have trouble remembering DOS commands, it adds menus to DOS. It even lets you sort your files and mark specific files to be copied, backed-up, or deleted—all without having to leave the program you're in.

Best of all, DESQview accomplishes all this with a substantial speed advantage over any alternative environment.

Multitask beyond 640K.

When you want to use several programs together, you don't have to leave your current program. Just open the next program. View your programs in windows or

full screen. Open more programs than you have memory for. And multitask them. In

640K. Or if you own a special EMS 4.0 or EEMS memory board, or a 386 PC, DESQview lets you break through the DOS 640K barrier for multitasking. If you have other non-EMS memory expansion products like AST's Advantage or the IBM® Memory Expansion Option, we have a solution for you, too. The ALL CHARGE-CARD™ "unifies" all your memory to provide up to 16 megabytes of continuous workspace. DESQview lets you use this memory to enhance your productivity. You can start 1-2-3 calculating and tell Paradox to print mailing

labels while you're writing a report in Word Perfect, or laying out a newsletter in Ventura Publisher, or designing a building in AutoCAD.

DESQview even lets you transfer text, numbers, and fields of information between programs.

Fulfill the 386 promise.

For 80386 PC users, DESQview becomes a 386 control program when used in conjunction with Quarterdeck's Expanded Memory Manager (QEMM)-386—giving faster multitasking as well as virtual windowing support.

And when you use DESQview on an IBM PS/2™ Model 50 or 60 with QEMM-50/60 and the IBM Memory Expansion Option, DESQview gives you multitasking beyond 640K.

Experts are voting for DESQview. And over a million users, too.

If all of this sounds like promises you've been hearing for future systems, then you can understand why over a million users have chosen DESQview. And why PC Magazine gave DESQview its Editor's Choice Award for "The Best Alternative to OS/2," why readers of InfoWorld twice voted DESQview "Product of the Year"

PC
MAGAZINE
EDITORS'
CHOICE
AWARD
NOV. 29, 1989

why, by popular vote at Comdex Fall for two years in a row, DESQview was voted "Best PC Environment" in PC Tech Journal's Systems Builder Contest.

DESQview lets you have it all now.

DESQVIEW SYSTEM REQUIREMENTS
IBM Personal Computer and 100% compatibles (with 8086, 8088, 8086, or 80386 processor) with monochrome or color display; IBM Personal System/2™ Memory Manager installed; for DESQview 2.0 1MB+ Expanded Memory (Optional) expanded memory boards compatible with the Intel Advanced Enhanced expanded memory boards compatible with the AST Advantage; EMS 4.0 or EEMS expanded memory board; two diskette drives or one diskette drive and a hard disk; Graphics Card (Optional) Hercules, IBM Color Graphics Adapter, IBM Enhanced Graphics Adapter, IBM Personal System/2 Advanced Graphics Adapter; Mouse Designer VGA

Orchid Technology
45365 Northport Loop W
Fremont, CA 94538
(800) 638-3322
(415) 683-0300
List Price: \$445

Requires: PC, XT, AT, or compatible, or PS/2 Model 30.

In Short: A short board that combines VGA register compatibility and backward compatibility with previous video standards with 512K RAM, allowing resolutions up to 1,024 by 768 in 16 colors. Works with any monitor type.

CIRCLE 667 ON READER SERVICE CARD

at all. However, its 512K of on-board 100-nanosecond memory should take care of most future possibilities. Most of its capabilities derive from the Tseng Labs VLSI chip it's built around and its Immos DAC.

ROOM TO GROW The Designer VGA excels in monitor compatibility. It gives you a solid growth path from IBM's original TTL Monochrome Display all the way up to the latest VGA and MultiSync-style monitors. Only archaeologists may be disappointed that it does not support standard CGA monitors.

The Designer VGA does require a minor setup to match it to your monitor before use. A jumper selects between monochrome and color modes, and a bank of four DIP switches selects the monitor standard. The switch (but not the jumper) can be adjusted through a cutout in the card-retaining bracket.

The Designer VGA adapts images for one standard, for instance Hercules, and readily displays them on another standard

such as VGA. It will also display noncompatible VGA modes, for instance, putting monochrome VGA modes on color VGA displays.

Both DB-9 and DB-15 connectors are available for digital- and analog-interfaced monitors, respectively. With MultiSync-style monitors, resolutions beyond VGA include 800 by 600 in 16 or 256 colors, and the 1,024 by 768 interlaced display (which is not compatible with NEC MultiSync monitors). In addition, six 132-column modes are supported—three monochrome and three color—with character box matrices of 9 by 8, 9 by 14, and 9 by 13 in each.

DRIVERS AND UTILITIES Orchid supplies high-resolution drivers for Lotus 1-2-3, Microsoft Windows (including Version 2.0), and AutoCAD, as well as several utilities, some specialized (AutoCAD zooming) and some not (mode changing).

In testing, the Designer VGA proved almost unremarkable—and that's good. Its scores on the PC Labs performance and benchmark tests fall into the middle-to-slow category. The Designer VGA passed four of the eight PC Labs VGA compatibility tests.

Choose the Designer VGA if you want to maximize your flexibility in connecting different display types to your PC, XT, or AT, and in taking advantage of all possible video modes including very high resolution.

PARADISE SYSTEMS INC.

Paradise VGA Plus Card

The "Plus" in the name of Paradise Systems' VGA Plus Card tells only part of the story. While the \$399 adapter rates a true plus in its ability to go beyond the VGA standard to up to 800 by 600 resolution in 16 colors, it also dips below the standard, too. In so doing, it adds full backward software compatibility with all previous major video standards—MDA, Hercules Graphics, CGA, MCGA, and EGA—to PCs (except for the early 64K system board model), XTs, ATs, PS/2 Models 25 and 30, and compatibles.

All of those potentials are contained on a completely hardware-compatible 8-bit expansion card that's only 5 1/4 inches long.

Most of the circuitry of the card is contained in one Paradise VLSI chip, supplemented by an Immos DAC. The 256K of video memory on the card is rated at 120 nanoseconds.

ANALOG CONNECTOR At the top of the card is the requisite VGA Video Feature Connector. The card's retaining bracket is decorated solely with an analog DB-15 connector, which precludes the possibility of plugging in an incompatible display. The VGA Plus works with both color and monochrome monitors that follow the VGA standard, as well as MultiSync-style displays equipped with analog inputs.

Normally, no hardware setup is required when installing the VGA Plus. Per the VGA standard, it configures itself to accommodate monochrome or color displays and allows using only the display mode supported by that monitor type. However, Paradise also includes a utility program called VGAPLUS, which allows

Business Forms That Mean Business

Isn't it frustrating? You need all kinds of forms to run your business. With a PC on your desk, why are you still doing forms by hand? Now with **FormWorx™**, and **FormWorx with Fill & File™**, you have two ways to streamline your forms processing. Save time. Save money. Get down to business.

FormWorx™ Get the forms you want.

Invoices, expense reports, tracking sheets, records, logs, and schedules. Whether it's a form you use a thousand times or a one-of-a-kind, you can make it with **FormWorx**. Start from scratch or modify one of the many forms we've already created for you.

Business forms that look business-like. Draw vertical and horizontal lines—single, double, and thick—with just a single keystroke. Lines print perfectly straight and solid on dot matrix and laser printers. Type and edit text. Large, wide, and condensed type sizes. Underline, boldface, center, justify, reformat, after case, and more.

It's easy to change your mind. Stretch or shrink a form. Erase, copy, and move things around until every detail is just right. Sort and resort a list, search for a word, etc. There's even an "Undo" command for those times when the computer does what you say instead of what you mean.

The fastest and easiest forms generator on the market. Period. Intuitive pull-down menus and clear commands allow you to create your first form soon after opening the package. It's that simple.

The critics are unanimous:

"FormWorx makes it easy to create forms. Inexpensive... easy to use." The Wall Street Journal.

"The user interface is first rate. Editing is especially easy. The documentation is well written, comprehensive, and easy to understand." PC Magazine.

And users agree:

"A great product is only half the story. You folks at FormWorx also have that ingredient which is missing with so many products on the market today—customer service. You take care of your customers like few in the industry do today—and the customers keep coming back with their friends!" R.D.W., Lexington, S.C.

NEW! FormWorx with Fill & File™ Fill out forms perfectly.

All the features of **FormWorx** plus powerful **Fill & File** software that lets you easily fill out the same form again and again. Perfectly. Standard government and industry forms. Armed forces, real estate, insurance, health care, law, education... **Form template shows on screen for easy fill-in.** Simply tab from one blank to another and just type. Your typing stays in the blanks and the form is protected against accidental overwrites. Easily edit your entries and get letter-perfect printouts every time.

Lets you print only the data onto pre-printed forms. Perfect alignment every time. Or if you prefer, print the form and the data onto blank paper. Either way, you can use search conditions to batch print only those forms you need.

Minimizes retyping. "Lookup" lists help you type frequent entries automatically. "Ditto" repeats what you typed before. Date, time, and serial number "stamps" will save you precious time. And fixed data can be preserved in "Read-only" fields.

Stores data in a database file for later use. Just retrieve the information whenever you need it for that form... or any other form. Store up to 32,000 records in a single file. Easily locate and update specific records.

Reads and writes dBASE III Plus™ (.DBF) files directly so the data on your forms can be used to generate reports, summaries, mailing labels, form letters, etc. Easily create a form for loading information into your dBASE files. Or quickly make a form for viewing selected information in those files. ASCII and other file formats are also supported.

Fill & File even does the math!

VGA Boards

PC Labs tested nine VGA boards that are IBM VGA BIOS-level as well as register-level compatible. Each was compared with the IBM PS/2 Display Adapter running in an 8-bit slot. The results for the Compaq Video Graphics Controller Board running in an 8-bit slot in an IBM PC AT were included for comparison's sake as were results for the same tests in a 16-bit slot and for the built-in VGA on an IBM PS/2 Model 60. The Windows Performance Tests and Video Benchmark Tests for VGA cards were run in a Microsoft Windows, Version 2.03, environment under DOS 3.2 on an 8-MHz IBM PC AT, an IBM PS/2 Model 60, and a Compaq Deskpro 386/20.

Overall, the IBM PS/2 Display Adapter board performed poorly in all the Windows Performance Tests. In two of the three Video Benchmark Tests, the IBM board came out somewhat slower than average; it was the slowest of the bunch in the Direct to Screen test. The Model 60 came out strong in the Video BIOS Routine Without Scrolling, owing in part to its 10-MHz speed. And while the Compaq V.G.C. Board's Direct to Screen test results show it's over twice as fast as any other VGA add-in board on the market, you need the appropriate device driver to take full advantage of this speed.

The Paradise VGA Plus Card fared well on most of the tests, with less-impressive results on only a few tests. Taxan's Ultra-Grafix VGA Model 580 Card also performed well throughout all tests. This, however, should be viewed as no coincidence: Taxan is using the identical board as Paradise Systems'.

Windows Performance Tests

Seven Windows call routines—LineTo, Rectangle, ScrollWindow, FillRect, Ellipse, BitBlt, and StretchBlt—are used for the tests.

The **60- by 20-Line Windows Test** measures the time it takes to perform the LineTo function in a window that is 60 characters wide and 20 lines down. For the **Full-Screen Windows Test**, the **Lines** test measures the time it takes to draw 100 random lines of various colors. The **Rectangles** test measures the time it takes to draw 100 rectangles of random size and color. The **Ellipses** test measures the time it takes to draw 100 ellipses of random size and color. The **BitBlt** test measures the time it takes to draw 100 rectangles of the same size. The **StretchBlt** test measures the time it takes to draw 100 rectangles of varying size but the same color. The **Scroll** test creates a rectangle that is 1/10 the height and 1/10 the width of the window in the upper-left-hand corner of the screen and measures the time it takes to scroll to the right pixel by pixel, down pixel by pixel, and diagonally to the upper-left pixel by pixel. The **Fill** test measures the time it takes to fill the window 512 times with a color. The results for the Windows Performance Tests are expressed in milliseconds per single operation because of the varying size of different screens.

Video Benchmark Tests

The **Direct to Screen** benchmark test measures the bandwidth of the video adapter by writing directly to the display memory buffer. The test is performed in video mode 3. The entire screen is updated using the assembly language REP STOSW instruction with register CX equal to 2000. This is done 1,000 times, and the result shown is the total of the 1,000 trials.

The **Video BIOS Routine with Scrolling** benchmark test measures the speed of the BIOS Teletype routine with scrolling. The test is performed in video mode 3. The screen is cleared, and 240 lines of 60 characters each (including a terminating carriage return and line feed) are written to the display through the BIOS Teletype routine. Although the first 24 lines written to the display do not involve scrolling, all the remaining lines scroll the display.

The **Video BIOS Routine Without Scrolling** benchmark test measures the speed of the BIOS Teletype routine without scrolling. The test is performed in video mode 3. The screen is cleared, and 24 lines of 60 characters each (including a terminating carriage return and line feed) are written to the display through the BIOS Teletype routine. This is done ten times, and the result shown is the total of the ten trials.

Video Benchmark Tests

What if there were more powerful forces at work?

Introducing the full range of Vectra PCs from Hewlett-Packard.

Exceptional power.

That's the defining characteristic of our new, comprehensive line of industry-standard PCs.

From the 20-megahertz 80386-based system, through the 12-megahertz 80286, to our entry-level and portable models.

And this line not only has the speed to get the job done, but the expandability, too.

For instance, the memory of our 12 MHz 80286-based model can be expanded up to 8 megabytes. And, im-

portantly, all 8 can be accessed at the same 12 MHz for faster performance.

With eight expansion slots and up to 620 megabytes of mass storage, the 80386 models' built-in expandability will handle your most demanding applications.

But there's more than just power. There's the compatibility to meet

Entry-level, 8086 compatible

Mid-level, 80286 based

today's standards while anticipating tomorrow's.

Both desk-top and floor-mount models support 5.25" and 3.5" internal flexible drives, while the 80286 and 80386 machines will run OS/2.

And every single HP Vectra PC offers something no other PC can: HP's

we never stop asking

What if...

HP Vectra RS/16 and RS/20 Personal Computers

- High-level, 80386 based
- Choice of 16 or 20 MHz, Intel 80386-based microprocessors
- Up to 620 Mbytes hard disc storage supported—17 millisecond average seek time for 100 through 620 Mbytes
- Up to 16 Mbytes of 32-bit memory using interleaved page-mode DRAM
- 8 accessory slots for expansion, 330-watt peak power supply, and six half-height mass storage shelves
- Both 5.25 and 3.5 inch flexible disc drives supported internally
- Separate mouse/graphics tablet port included
- Intel 80387 and Wenetk 1167 co-processor support

HP Vectra ES and ES/12 Personal Computers

- Mid-level, 80286 based
- Choice of 8 or 12 MHz, Intel 80286-based microprocessors
- Up to 8 Mbytes of expanded memory, accessed at 12 MHz in the Vectra ES/12 PC, supporting LIM 4.0 expanded memory specification without using I/O slots
- 7 accessory slots for expansion
- 20 and 40 Mbyte hard disc models
- Both 5.25 and 3.5 inch flexible disc drives supported internally
- Separate mouse/graphics tablet port included

HP Vectra CS Personal Computer

- Entry-level, 8086 compatible
- 7.16 MHz, 8086-compatible microprocessor with zero wait states
- Up to 8 Mbytes of expanded memory, addressable via LIM 3.2 expanded memory specification
- 7 accessory slots for expansion
- 20 Mbyte hard disc model
- Both 5.25 and 3.5 inch flexible disc drives supported internally

HP Portable Vectra CS Personal Computer 8086 compatible

- 7.16 MHz, 8086-compatible microprocessor with zero wait states
- Up to 6 Mbytes expanded memory, addressable by LIM 3.2
- Four I/O slots
- Supports two 3.5 inch flexible disc drives
- 20 Mbyte internal hard disc model available
- Up to 10 hour battery life
- IBM style keyboard

* Diagonal scrolling is jumpy

To define "true" register compatibility, it is necessary to first define compatibility itself. IBM has introduced two types of VGA, one with the on-board PS/2 VGA system and the other with its plug-in VGA card. Neither of these is totally compatible with the other on all levels.

In designing the VGA circuitry of their boards, many manufacturers have opted to use the plug-in IBM VGA card as their model. The PC Labs benchmark tests are based on the VGA environment of the Micro Channel PS/2 and were designed to test compatibility with this standard.

The contradictory result is that while the boards tested may indeed be register compatible with the IBM PS/2 Display Adapter, none is absolutely compatible with the built-in VGA system of the IBM PS/2 Model 60. As a practical matter, these VGA boards will work with applications that follow the less stringent plug-in VGA standard but may have problems with software that attempts to access the full range of abilities found in the built-in VGA system. For most applications, that level of compatibility should be good enough.

The nine boards tested passed all of the PC Labs VGA Software Compatibility tests, which means that their BIOS interface is consistent with the IBM

definition. Programs adhering strictly to BIOS should run on any of these boards.

In the PC Labs VGA Hardware Compatibility tests, the built-in VGA on the IBM PS/2 Model 60 and Video Seven's VEGA VGA were the only boards to successfully display all 20 video modes. However, the VEGA VGA, which is perhaps best regarded as an enhanced EGA card that should work with most VGA software, failed four out of the seven PC Labs VGA Hardware Compatibility tests.

Typically, boards that have failed the Pan and Scroll test can pan and scroll, albeit in a step pattern or with a certain degree of jumpiness. And boards that failed the Status Register test could cause graphics-oriented video games to operate improperly.

Only the built-in VGA on the IBM PS/2 Model 60 passed all of the PC Labs VGA Hardware Compatibility tests. Coming in right behind the PS/2 Model 60 is the Everex EVGA board, which only failed modes 7 and 15 (which are monochrome modes) in the Direct Writes to Frame Buffer video modes test. The other modes that gave the boards some trouble were mode 13, the high-color mode (320 by 200 pixels in 16 colors) for EGA, and mode 16, the high-resolution mode (640 by 350 pixels in four colors) for EGA. Boards that failed mode 16 are not fully EGA

compatible at the hardware level.

The IBM PS/2 Display Adapter, the Compaq V.G.C. Board, Taxan's Ultra-Grafix VGA Model 580 Card, the Paradise VGA Plus Card, and the Tecmar VGA ranked well overall, failing only two video mode tests and one other VGA Hardware Compatibility test. They are followed by the Tatung VGA Platinum Card and the Intelligent VGA Board, which failed one video mode test and two other VGA Hardware Compatibility tests.

The VGA Software Compatibility tests use the VGA BIOS to perform various operations, including displays of color bars, displays of characters, characters with various attributes, and an octagon made up of lines of various colors. These tests are similar to those used on the CGA and EGA. An additional color bar test in the 256-color VGA mode displays all colors at once. Programs that use only VGA BIOS calls should work with boards that pass the VGA Software Compatibility tests.

The VGA Hardware Compatibility tests bypass the VGA BIOS to go directly to the VGA hardware. They include writing directly to the VGA RAM, changing the colors of the display palette by using the digital-to-analog converter (DAC) chip directly, selecting each VGA mode using hardware registers, and checking the on-board clock versus the PC's clock. The clock is used by some software to detect the vertical blank interval (VBI), which allows a program to update the screen without flickering.

The pan and scroll hardware support was tested along with split screen and programmable character generator support. These features are often used by high-end graphics packages and sophisticated window manager programs. Adapters that use only VGA BIOS compatible will probably fail one or more of the VGA Hardware Compatibility tests. Many programs, including Microsoft Windows/386, require hardware compatibility for VGA adapters.

the board to mimic any supported video standard. For instance, after you configure the VGA Plus with the program, your Hercules graphics programs will execute all their routines on your VGA display.

The VGA Plus has only one hardware jumper, which selects whether the board will have its 800 by 600 mode accessible or will keep its Video Feature Connector completely IBM compatible. The factory setting, high resolution enabled, should not be a problem because no accessories yet make use of the connector.

For true VGA hardware compatibility, the Paradise VGA Plus is a good choice. Its higher-resolution mode is a windfall for owners of MultiSync-style monitors.

MULTITUDE OF DRIVERS The high-resolution mode of the VGA Plus requires the use of a MultiSync-style monitor. In addition, your software must be compatible to take advantage of it. Paradise supplies drivers to handle *Microsoft Windows* (Version 2.0 only), *GEM*, *AutoCAD*, *CADvance*, *Ventura Publisher*, and *Framework II*. The VGA Plus also has two 132-column text modes, 25- and 43-row. Drivers are supplied to support *Framework II*, *WordStar*, Version 3.3; *WordStar Professional*, Release 4.0; and *WordPerfect*, all in 132-column mode.

The Paradise VGA Plus rates among the most compatible VGA boards available. It passed five out of the eight PC Labs VGA compatibility tests, displaying excellent scrolling capabilities in the split-screen test. Like the Taxan Ultra-Grafix VGA, its performance was among the best in the PC Labs *Windows* performance tests and average in the PC Labs video benchmark tests.

For true VGA hardware compatibility, the Paradise VGA Plus is a good choice.

Its added higher-resolution mode is a wonderful windfall for owners of MultiSync-style monitors.

SIGMA DESIGNS INC.

Sigma VGA/H

The "H" in the name of the Sigma VGA/H must stand for "hardware compatible" in that Sigma Designs claims it to be hardware compatible with all IBM video standards as well as Hercules graphics. Moreover, it's the only VGA board compatible with digital input monitors that also includes a VGA-style Video Feature Connector. On the other side of the connection, the \$399 VGA/H will mate with any PC or compatible, as well as PS/2 Models 25 and 30. It even stretches the VGA level of resolution up to 800 by 600 pixels in 16 colors when you have a MultiSync-style display.

The features of the VGA/H are brought to life with a Tseng Labs VGA chip, an Inmos DAC, and 256K of socketed 100-nanosecond DRAM chips. All fit on an 8½-inch board that uses an 8-bit interface.

SUPPORTS MANY STANDARDS

Sigma Designs claims hardware compatibility with MDA, Hercules Graphics, CGA, MCGA, EGA, and VGA display standards. In addition, it plugs into both digital and analog monitors using the female 9-pin and 15-pin D-shell connectors on its retaining bracket.

Not all display standards are compatible with all monitor types, however. MultiSync-style displays will handle all modes of the VGA/H; IBM VGA displays will show everything (including Hercules Graphics) except the highest resolution modes. Other display types are limited basically to the standards for which they were designed (with a few exceptions).

The VGA/H supports both 800- by 560- and 800- by 600-pixel 16-color graphics modes, as well as a wealth of 132-column text modes. Four of these produce 25 rows of characters, including modes for all monitor types except IBM VGA (including MDA, CGA, EGA, and MultiSync-style). Three modes allow 44 rows of text on MDA, EGA, and MultiSync-style displays. The VGA/H will also put monochrome VGA images on color

In Short: The only VGA add-in board compatible with digital input monitors that also includes a VGA-style Video Feature Connector, the Sigma VGA/H is compatible with all IBM video standards as well as Hercules Graphics and offers resolutions up to 800 by 600 pixels in 16 colors for MultiSync-style displays.

CIRCLE 608 ON READER SERVICE CARD

VGA displays (and vice versa) without a complaint.

Setting up the VGA may require moving a single jumper or toggling some of the four DIP switches that can be seen through the retaining bracket of the card. No other adjustments are required.

ADVANCED MODES Sigma Designs does not include special drivers with the VGA/H, but instead relies on software to take advantage of its advanced modes. A utility called *DISPLAY* is included for switching display modes (with VGA- and MultiSync-style displays, most mode switching is automatic), blanking your monitor screen after a preset period, and booting games on the VGA/H using otherwise incompatible displays. Proprietary diagnostics are also included.

In testing, the VGA/H demonstrated hardware compatibility that places it in the top tier of the boards reviewed here. The board passed five out of eight of the PC Labs VGA compatibility tests and excelled

RESOLUTION À LA MODE

To help you compare VGA, EGA, and CGA output, we show the same image created in each of the three modes. The image, designed by PC Labs, was created using *Dr. Halo III* from Media Cybernetics and contains both type and a

curved graphic to facilitate comparison.

In photo A, you can see the image in VGA's highest resolution mode, 640 by 480 pixels in 16 colors. The image in photo B was created in VGA's 256-color mode at a resolution of 320 by 200. Photo

C shows the image in EGA's 16-color 640 by 350 resolution. Photo D shows the four-color 320 by 200 resolution of CGA. The curvature of the pie chart and of the block characters is smoothest in the highest resolution mode.

**we have
the VGA display for it.**

Magnavox introduces two new Professional Series displays that are fully compatible with all 17 VGA modes—both designed with the intelligence you've come to expect from Magnavox.

With a VGA display system, you'll get the most out of your present software and prepare yourself for graphics environments like Windows 386, OS/2™ and Presentation Manager™. Resolutions include 720 x

400 for text, and 640 x 480 in 256 colors for graphics.

Both displays have a 14" CRT, versus the 12" industry standard. And both come with a built-in tilt/swivel base and are backed by a 2-year limited warranty—twice as long as most other brands.

At \$249 for the paper-white monochrome and \$649 for the color display, Magnavox makes VGA displays affordable.

MAGNAVOX
Smart. Very smart.

CIRCLE 101 ON READER SERVICE CARD

■ VGA BOARDS

at the direct palette access test. Both BIOS and direct-memory-writing performance on the VGA/H was slower than average.

The VGA/H is the board to choose for upgradability. It will allow you to move up to new display standards whenever you can afford a new monitor. It's the only board that lets you go backward to a digital monitor or forward with its VGA Video Feature Connector.

TATUNG CO. OF AMERICA INC.

Tatung VGA Platinum Card

Platinum is useful and beautiful—the stuff of jewelry and catalytic converters. Tatung's VGA Platinum Card shares those qualities, if embryonically. The \$449 board is a practical product that supports all major video standards from MDA up to VGA, extending up to 800 by 560 pixels in 16 colors. It's beautiful, too, in its ability to automatically adjust itself to the standard demanded by your software. But the raw metal in the Platinum Card needs more work to fulfill its potential.

The 7-inch-long Platinum Card is a product of technological convergence, built from both Chips and Technologies' VGA chip and ATI Technologies' VLSI circuit for lower-resolution work. Its 256K RAM is rated at 120 nanoseconds, and it uses an Innos DAC.

REGISTER-LEVEL MATCH A register-level rather than hardware match for the VGA standard, the Platinum card's expansion connector follows the EGA standard. In fact, the Platinum Card claims full hardware compatibility with the EGA standard and only a BIOS-level match for the MDA, Hercules Graphics, and CGA standards. It even puts images from any standard up to EGA on lesser CGA displays and transposes monochrome VGA screens to color displays.

Both digital DB-9 and analog DB-15 connectors are installed on the Platinum Card's retaining bracket. An eight-bank DIP switch, accessible through a cutout in the bracket, adjusts the card to match monitors that don't fit the analog VGA standard. VGA-spec displays (but not MultiSync-style monitors) automatically take

In Short: A short card that's register compatible with the VGA standard and backward compatible with all previous major video standards and monitors. It offers several additional resolutions up to 800 by 560 in 16 colors.
CIRCLE 64 ON READER SERVICE CARD

command and override the switch settings. An RF output for a television modulator is also available on the Platinum Card.

An entire row of badly documented jumpers lines the top half of the rear edge of the card. The accompanying manual lists the function of only one of the six sets, which sets the card's base address.

BEYOND VGA Beyond the VGA standard, the Platinum Card offers eight modes of its own. Four push horizontal resolution to 1,056 pixels to put 132 columns of text on MultiSync-style displays, at either 25 or 44 columns (200 or 354 pixels) deep. Also available are two 640- by 528-pixel modes. At its sharpest, the Platinum Card produces graphics at the odd aspect ratio of 800 by 560 in 16 colors.

Tatung supplies a control program that allows manual shifting of video modes and also includes a screen saver that blanks your monitor after a predetermined period of system inactivity. Programs supported by Tatung drivers include AutoCAD, Microsoft Windows, GEM, Ventura Publish-

er, and Lotus 1-2-3 (in 132-column text mode).

Like IDS's Intelligent VGA Boards, the Platinum Card produced some of the slowest times in the PC Labs performance and benchmark tests. It also fared as well as the IDS board in passing most of the PC Labs VGA compatibility tests. All in all, the Platinum Card is not as lustrous as it could be. With some polishing, however, it could be a strong VGA contender.

TAXAN USA CORP.

Ultra-Grafix VGA Model 580 Card

Taxan's Ultra-Grafix VGA Model 580 Card earns its name by going beyond VGA hardware compatibility with an enhanced 800 by 600 16-color mode for MultiSync-style monitors. The \$395 product also rates as a sub-VGA board, endowed with the ability to handle any major video standard below the VGA level—including MDA, CGA, MCGA, and EGA—and put a likeness of its images on any monitor it works with (VGA and analog MultiSync-style only). It plugs into nearly any PC (except for the early 64K system board model), XT, AT, PS/2 Model 30, or compatible.

Based on a Paradise Systems VLSI chip and an Innos DAC, and equipped with 256K of 120-nanosecond memory, the Ultra-Grafix VGA Model 580 Card bears a striking resemblance to the Paradise VGA Plus. As with the Paradise board, the Ultra-Grafix VGA is 5¼ inches long and uses an 8-bit interface. It also includes an IBM-standard VGA Video Feature Connector at its top edge.

The only monitor connection supplied is a DB-15 connector suitable for analog VGA-standard monitors and MultiSync-style displays equipped with suitable adapter cables. The Ultra-Grafix VGA automatically senses whether it's attached to a color or monochrome VGA display and limits its VGA display modes accordingly. The board will, however, map Hercules monochrome graphics to a color VGA system.

EASY SETUP You won't have to endure any setup head-scratching when plugging in the Ultra-Grafix VGA. Since

If our new 286 computer is so terrific, why doesn't it cost more?

This handsome piece of high-tech wizardry is the new Dell System 220.

It's the first 286 computer that runs at 20 MHz.

Which means it's as fast as most 386 computers, running MS[®] OS/2 and MS-DOS[®] at blistering speed. All from a tiny corner of your desk.

Yet it costs less than half of what most 386 computers sell for.

Which might lead you, quite reasonably, to ask: How can Dell offer so much for so little?

Well, you buy direct from us, the manufacturer. Eliminating computer stores and their salespeople—who can add thousands of dollars to a computer's cost, and the hassle of a middleman.

"Speed is a good thing. Safe, reliable, no hassles speed is better still."—Al Poor, Editor's Choice, PC Magazine

We design and build our computers right here in Austin. Putting a premium on speed, compatibility, and reliability.

We're already shipping our version of MS OS/2, so you can run OS/2 applications, now and in the future.

"...includes a year's on-site support...in the price of the computer. This is the sweetest support deal offered

by any computer vendor in the business.”—Eric Knorr, PC World

And each computer goes through a battery of diagnostic checks, including a comprehensive burn-in before shipment.

In addition, every computer comes with a level of service most computer stores can only envy.

Including expert technical advice before you buy, and free technical phone support after-

wards. Plus next-day on-site repair during the first year.

We also give you a thirty-day money-back guarantee, and a one year limited warranty.

“If your desire for speed is inexhaustible, (this is) the machine for you...it’s reassuring when a computer completes some operations even before your fingers leave the keyboard.”

—Harry Miller, PC World

As one of the largest personal computer manufacturers in the U.S., we’ve sold computers to large companies, small companies, and everything in between. Because of this, you can be confident we’ll be here to support you now and in the future.

After all, we’ve been offering better computers, with better service—at better prices.

Now, if you’d like the rest of the details on our hyperfast 286 computer, and the rest of our line, there’s only one more thing you have to do.

Turn the page.

The Dell Computer Store.

Welcome to our store. To buy or lease a Dell computer, call (800) 426-5150. We'll help you select the right system.

For service and technical support, call our highly trained technicians at (800) 624-9896. In almost all cases, any problem can be solved over the phone.

These technicians are also supported by Honeywell Bull service engineers who can be dispatched to your office by the next business day, should on-site service be required. This optional service contract is available in over 95% of the United States, with over 1,000 engineers in 198 service locations.*

We are so confident in our quality products that we also provide a Total Satisfaction Guarantee, which says that any system bought from us may be returned within thirty days from the date it was shipped to you for a complete refund of your purchase price.

We also offer a One Year Limited Warranty, which warrants each system we manufacture to be free of defects in materials and workmanship for one full year. During the one year period we will repair or replace any defective products properly returned to our factory.

Call or write for the complete terms of our Guarantee Warranty, and the Honeywell Bull Service Contract. Dell Computer Corporation, 9505 Arboretum Blvd., Austin, Texas 78759-7299.

Dell products are available on a GSA contract. Call us for GSA pricing.

THE NEW 20MHz 386 SYSTEM 310.

The top of the line. It's the highest performance 80386 computer available, faster than the IBM® PS/2® Model 80 and the Compaq® 386/20. It runs at 20 MHz, with the latest 32-bit architecture for maximum performance. And it's completely MS® OS/2 compatible. Since it also has Intel's® Advanced 82385 Cache Memory Controller, and high performance disk drives, the System 310 is ideal for intensive database management, complex research and development, CAD/CAM, and desktop publishing. As a network file server the system offers an unbeatable combination of price and performance.

Standard Features:

Intel® 80386 microprocessor running at 20 MHz.
1 MB of 80 ns 32-bit RAM expandable to 16 MB without using an expansion slot.

Advanced Intel 82385 Cache Memory Controller with 32 KB of high speed static RAM.

Socket for 20 MHz 80387 coprocessor. 5.25" 1.2 MB or 3.5" 1.44 MB diskette drive.

Dual diskette and hard disk drive controller.

Enhanced 101-key keyboard.

1 parallel and 2 serial ports.

200-watt power supply.

Real-time clock.

8 expansion slots (6 available with hard disk drive controller and video adapter installed).

Dell System Analyzer.

MS-DOS® and MS OS/2 compatible.

Security lock with locking chassis.

12 month on-site service contract (Available on complete systems).

Options:

1 MB RAM upgrade kit.

20 MHz Intel 80387 math coprocessor.

2 MB or 8 MB memory expansion boards.

SYSTEM 310	With Monitor and Adapter		
Floppy Disk Drives	VGA Mono	VGA Color	VGA Color Plus
40 MB 20 ms	\$4,099	\$4,299	\$4,399
90 MB 18 ms EXX	\$4,499	\$5,099	\$5,199
180 MB 18 ms EXX	\$5,399	\$5,599	\$5,699
320 MB 18 ms EXX	\$7,299	\$7,399	\$7,699

THE NEW 20MHz 286 SYSTEM 220.

As fast as most 386 computers, at less than half the price—more power for the money than any other system. An 80286 system that runs at 20 MHz, with less than one wait state. Completely compatible for both MS-DOS and MS OS/2 applications (it runs OS/2 faster than IBM PS/2 Model 80), and with a remarkably small footprint, the System 220 is the ideal executive workstation for database management, business, or sophisticated connectivity applications. The system uses page-mode interleaved memory; the page-mode RAM operates at less than one wait state, and inter-leaving results in a performance increase of about 15 percent.

Standard Features:

80286 microprocessor running at 20 MHz.

1 MB of RAM expandable to 16 MB (8 MB on system board).

Integrated diskette and VGA video controller on system board.

One 3.5" 1.44 MB diskette drive.

Integrated high performance hard disk interface on system board.

Enhanced 101-key keyboard.

1 parallel and 2 serial ports.

LIM 4.0 support for memory over 1 MB.

Real-time clock.

Three full-sized AT® compatible expansion slots.

Socket for 80287 coprocessor.

Dell System Analyzer.

MS-DOS and MS OS/2 compatible.

Security lock with locking chassis.

12 month on-site service contract (Available on complete systems).

Options:

3.5" 1.44 MB diskette drive.

Intel 80287 coprocessor.

1 MB RAM upgrade kits.

SYSTEM 220	With Monitor		
	VGA Mono	VGA Color	VGA Color Plus
One Diskette Drive	\$2,299	\$2,499	\$2,599
40 MB 20 ms Floppy Disk	\$2,599	\$3,199	\$3,299
180 MB 18 ms Hard Disk	\$3,799	\$3,999	\$4,099

THE NEW 12.5MHz 286 SYSTEM 200.

A great value in a full-featured AT compatible. An 80286 computer running at 12.5 MHz, this system is completely MS OS/2 compatible. It's ideal for general business applications, as well as software development, local area networks, CAD/CAM, and desktop publishing. The System 200 offers high speed drive options, industry standard compatible BIOS, and on-site service. At these low prices, the System 200 is the best value in the 80286 marketplace. As Executive Computing said of this computer's predecessor, "If faster processing speed and low cost are two key issues affecting your purchase decision, this machine might be the ideal choice for your office."

Standard Features:
Intel 80286 microprocessor running at 12.5 MHz.
640 KB of RAM, expandable to 16 MB (4.6 MB on system board).
525" L2 MB or 3.5" 1.44 MB diskette drive.
Dual diskette and hard disk drive controller.
Enhanced 101-key keyboard.
1 parallel and 2 serial ports.
200-watt power supply.
Real-time clock.
6 expansion slots. (4 available with hard disk drive controller and video adapter installed).
Socket for 8 MHz 80287 coprocessor.
Dell System Analyzer.
MS-DOS 6 or MS OS/2 compatible.
Security lock with locking chassis.
12-month on-site service contract. (Available on complete system).
Options:
512 KB RAM upgrade kit.
8 MHz Intel 80287 coprocessor.

SYSTEM 200	With Monitor and Adapter

320 MB 10 sec ESD	\$5,799	\$5,999	\$6,199	\$6,299

THE NEW 8088 SYSTEM 100.

A full-featured, yet economical one-piece computer for office, school, or home. This system is fast, easy to use, and ready to run with Dell Enhanced MS-DOS 3.3, Microsoft® DOS Manager, and Microsoft® Works software—more than a \$400 value, included at no extra charge. Complete MS-DOS compatibility means you can run thousands of programs for business, personal finance, education, and entertainment. And the System 100 can grow, with the high quality options listed below. A price leader in 8088 technology, the System 100 boasts an innovative design that allows for more power, speed and convenience than most of its competitors.

Standard Features:
Intel 8088 microprocessor running at 9.54 MHz selectable to 4.77.
640 KB of RAM.
3.5" 720 KB diskette drive.
Diskette drive controller integrated on system board.
Integrated high-quality 84-key keyboard.
1 serial and 1 parallel port.
Two full-sized expansion slots available when video adapter is installed.
One half-sized expansion slot used for video adapter.
Socket for 8 MHz 8087 coprocessor.
Internal speaker with earphone jack and volume control.
Security Tie-Down bracket.
Dell Enhanced MS-DOS 3.3.
Microsoft DOS Manager.
Microsoft Works.

Options:
3.5" 720 KB diskette drive.
8 MHz Intel 8087.

SYSTEM 100	With Monitor and Adapter

PRINTERS. We now offer a full line of PC-compatible dot matrix and laser printers. Our dot matrix printers range from inexpensive near-letter quality printers to the highest resolution printers available. Our laser printers include some of the fastest, most reliable printers ever made. All are 300 dots per inch, and all support serial and parallel interfaces. And all printers come with our 30-day money-back guarantee and a one year warranty.

LASER PRINTERS

Laser System 150 \$5,995
15 pages per minute, text and graphics
15 MB standard memory, expandable to 2.0 MB
Dual 250-sheet input trays
Laser System 80 \$3,195
8 pages per minute text and graphics
1.5 MB standard memory, expandable to 2.0 MB
Laser System 60 \$2,195
6 pages per minute, text and graphics
1.5 MB standard memory, expandable to 2.0 MB
DOT MATRIX PRINTERS
Printer System 800 \$699.95
Highest resolution text and graphics from a 24-wire dot matrix printer
Draft quality at 200 cps

Correspondence quality at 132 cps
Letter quality at 66 cps
Standard parallel and serial interfaces
Wide carriage
Printer System 600 \$499.95
9-wire dot matrix
Draft quality at 240 cps
Near-letter quality at 60 cps
Standard parallel interface
12.6 KB buffer (expandable to 28.6 KB)
Wide carriage
Printer System 300 \$199.95
9-wire dot matrix
Draft quality at 144 cps
Near-letter quality at 36 cps
Four standard fonts
Paper parking
4 KB buffer
Standard Parallel interface

PERIPHERALS. With our unique manufacturing capabilities, we can build a system to your exact specifications. We offer monitors, modems, graphics boards, tape backups, hard drives, diskette drives, expanded memory boards, a serial mouse, and more. Call for details.

Operating System Software
Dell Enhanced MS-DOS 3.3 with disk cache and other utilities \$119.95.

ADD CODE NO.11816

WHY SETTLE FOR A MERE VGA?

So you say that VGA is not good enough for you. You say you want more pixels—something like 1,024 horizontally and 768 vertically. And you also want more colors. You're dissatisfied that the VGA allows 256 simultaneous colors only with the puny 320 by 200 mode. You want 256 simultaneous colors at the full 1,024 by 768 resolution.

Remember this number: 8514.

The 8514/A Display Adapter, 8514 Memory Expansion Kit, and 8514 Color Display comprise IBM's high-end graphics video system for the PS/2 Models 50, 60, and 80. The maximum resolution is 1,024 by 768 with 256 colors selected from 262,144. The 8514/A also contains a graphics coprocessor that speeds up the drawing operation. Although it is a little high for most users, the \$3,100 cost of the complete 8514/A system is competitive with other video boards and monitors of comparable resolution and color capability.

The 8514/A consists of two sandwiched boards that occupy a special slot in the PS/2 Micro Channel architecture bus. Although you can use any PS/2 monitor with the 8514/A, you need the 8514 Color Display for the 1,024 by 768 resolution.

MEMORY AND MODES The 8514/A comes with 512K of video buffer memory, organized in four color planes of 128K each. This gives you 16 simultaneous colors. The 8514 Memory Expansion Kit increases the on-board memory to 1MB. The extra memory adds four more color planes, for 256 simultaneous colors. (One megabyte is enough for a resolution of 1,024 by 1,024 with eight color planes; the 8514 can use the extra memory for storing fonts and bitmaps.)

The 8514/A supports only four graphics modes: a 640 by 480 mode and three 1,024 by 768 modes (each using a different font size). These are called the "advanced function" graphics modes. In the 1,024 by 768 mode, the display is inter-

Microsoft Excel running under Windows on the IBM 8514/A Display Adapter. The 8514 driver will be available with Windows 2.1.

laced but at a fairly high frame rate of 43 Hz. I did not notice any flickering.

The 8514/A occupies a special bus slot with an additional connector that supplies video signals from the PS/2 system-board VGA to the 8514/A board. When the 8514/A is not in an advanced-function mode, it simply routes the video signals to the monitor attached to the adapter. Thus, the 8514/A does not replace the VGA but works in conjunction with it. You still have all the CGA, EGA, and VGA video modes supported by the VGA without any special VGA hardware on the 8514/A.

You can also use the 8514/A with two monitors. One monitor (usually the 8514 Color Display) is attached to the 8514/A adapter; the other (presumably one of IBM's other PS/2 color monitors) is connected to the VGA on the system board. For all the VGA video modes (including the CGA and EGA compatibility modes), both monitors show the VGA output. But when the 8514/A is switched into an advanced-function mode, the two adapters work independently. This flexibility is particularly useful in some dual-screen CADD programs or in program development work for running both a debugger on one screen and the program on another.

FUNDAMENTALLY DIFFERENT

The biggest difference between the 8514/A and the VGA is the 8514 graphics coprocessor. The video buffer memory in the VGA is addressable by the PC's microprocessor like any other memory in the system. An application program writes text or graphics to the video display as if it were writing the characters or bits to memory. This configuration is simple enough, but it burdens the application program (or the graphics interface software) with the time-consuming job of writing the graphics images to the adapter memory.

The 8514/A is fundamentally different. The 1MB of video buffer memory in the 8514/A is *not* directly addressable by the PC's microprocessor. Instead, the board contains a graphics coprocessor that performs many high-level functions, including the drawing of lines (with selectable styles), filled areas (with selectable patterns), and text.

Basically, an application program tells the 8514/A board what to draw and the board does all the actual drawing. To draw a rectangle on the 8514, an application program need only specify the coordinate position of the upper-left corner, the width, the height, and the color. The graphics coprocessor does the rest.

FACT FILE

IBM 8514/A Display Adapter

IBM Corp.

Consult your local authorized IBM dealer.

List Price: \$1,290

Requires: PS/2 Model 50, 60, or 80.

Options: The 8514 Memory Expansion Kit (required for 256 simultaneous colors rather than 16). The 8514 Color Display (required for 1,024 by 768 resolution).

In Short: The 8514/A is IBM's high-end video board for the PS/2 series. The resolution is 640 by 480 or 1,024 by 768 (depending on the monitor) with 16 or 256 colors (depending on the amount of memory on the board). The board includes hardware-assisted high-level drawing functions.

CIRCLE 667 ON READER SERVICE CARD

IBM 8514 Memory Expansion Kit

IBM Corp.

Consult your local authorized IBM dealer.

List Price: \$270

Requires: The 8514/A Display Adapter.

In Short: Sixteen 32K graphics memory chips that plug into an 8514/A to give you 256 simultaneous colors rather than 16.

CIRCLE 668 ON READER SERVICE CARD

IBM 8514 Color Display

IBM Corp.

Consult your local authorized IBM dealer.

List Price: \$1,550

Requires: PS/2 Model 30, 50, 60, or 80.

In Short: The 8514 display is the only PS/2 monitor capable of 1,024 by 768 resolution. It can be attached to any PS/2 computer, but it's really designed for use with the 8514/A adapter. IBM says the monitor measures 16 inches diagonally and provides "high contrast," but don't believe it.

CIRCLE 669 ON READER SERVICE CARD

THE PGC STORY The 8514 is not the first graphics coprocessor board IBM has offered for personal computers. When IBM introduced the EGA in 1984, it also introduced the Professional Graphics Controller (PGC). The PGC supported 640 by 480 resolution with 256 simultaneous colors—out of 4,096—and included a CGA-emulation (but not an EGA-emulation) mode. The board and monitor cost \$4,300, and the board required two PC-XT or PC AT slots.

The PGC was a CADD board with sophisticated three-dimensional vector-

based drawing functions. Although the PGC eventually was supported by many CADD applications (and also became something of a standard when certain video board manufacturers designed PGC superset boards), it had almost no mainstream application support.

One of the more serious deficiencies in the PGC was its inability to do bit-block transfers ("bitblts") between microprocessor memory and video memory. Bitblts are used quite frequently in windowing environments. For example, moving a mouse pointer across a graphics screen requires several bitblts for each new position of the pointer.

The high-level graphics functions in the 8514/A are not as sophisticated as those in the PGC. The 8514/A is rather a general-purpose graphics board and does only two-dimensional drawing. But it does support bitblts. The 8514/A is particularly well suited to a graphics-based windowing system such as *Microsoft Windows* or the OS/2 Presentation Manager. (The 8514/A will be supported under *Windows*, Version 2.1, and will quite likely be supported under the initial release of the OS/2 Presentation Manager, scheduled for October.)

DRAWING FUNCTIONS Controlling the drawing functions of the 8514/A is easily accomplished by making use of a high-level software interface—a RAM-resident program called HDILOAD. .EXE that comes on a floppy disk supplied with the adapter board. The program is copied to the hard disk during installation and can be loaded into memory in the AUTOEXEC.BAT file. HDILOAD gives applications access to 59 high-level drawing functions. The entry points for these functions are obtained through software interrupt 7Fh.

For programmers who wish to explore the 8514/A, IBM sells a 52-page Programmer's Guide (including a disk with some utilities and demonstration programs) and a 140-page Technical Reference manual that documents the 59 functions. It's easiest to use the 8514/A software interface from programs written

in C. Two C header files, an assembly language binding routine, and a demonstration program written in C are supplied with the 8514/A adapter.

The drawing functions have names such as HLINE (to draw a line) and HRECT (to draw a rectangular area). Each of these function names is actually a C macro that calls a function in the assembly language binding routine. The binding routine then calls the appropriate entry point in HDILOAD, and HDILOAD accesses the hardware of the 8514/A through registers.

To test the speed of the 8514 graphics coprocessor, I wrote a C program that draws several thousand randomly sized rectangles filled with a solid, randomly chosen color. For the VGA in the 640 by 480 graphics mode, I used a highly optimized rectangle-drawing routine written in assembly language. For the 8514/A in the advanced-function 640 by 480 mode, I called the functions HSCOL (select a color) and HRECT (draw a rectangle) directly from my program.

LIBERATE YOUR PROCESSOR On a 20-MHz PS/2 Model 80, the VGA routine took an average of 8.3 milliseconds per rectangle. On the 8514/A, the time dropped to 2.7 ms. per rectangle, about three times as fast. Moreover, much of this time is spent by the 8514/A board doing the drawing. The PS/2 microprocessor is freed up after about 0.8 ms. Thus, the microprocessor actually spends about one-tenth as much time drawing the rectangle on the 8514/A as on the VGA.

With the introduction of the OS/2 Presentation Manager in October, graphics will become an increasingly important part of the PC's future. The 8514/A is the right board at the right time. It is not quite at the right price, but that problem is likely to be solved by other hardware manufacturers. Look for a lower-cost substitute for IBM's poor 8514 display in the near future, and at least one 8514/A clone after that. —Charles Petzold

FACT FILE

Ultra-Grafix VGA Model 580 Card

Taxan USA Corp.
18005 Courtney Ct.
City of Industry, CA 91748
(800) 544-3888
(818) 810-1291
List Price: \$395

Requires: PC, XT, AT, or compatible, or PS/2 Model 30.

In Short: A VGA-hardware-compatible short card that offers backward compatibility with previous video standards along with an enhanced-resolution 800 by 600 mode in 16 colors. For VGA and MultiSync-style displays only.

CIRCLE 692 ON READER SERVICE CARD

there's no need to select monitor types, it uses no DIP switches and only one hardware jumper, which selects whether the board will have its 800 by 600 mode accessible or keep its Video Feature Connector completely IBM compatible.

To switch the Ultra-Grafix between some of its modes, you must use a special utility program, VGAPLUS, that Taxan supplies along with the board. The 800 by 600 resolution mode of the Ultra-Grafix VGA requires you to have a MultiSync-style monitor and compatible software. Drivers are included with the board to enable the following program to use this ultra-mode: *Microsoft Windows* (Version 2.0 only), *GEM*, *AutoCAD*, *CADvance*, *Ventura Publisher*, and *Framework II*. In addition, drivers are included to use *Framework II*; *WordStar*, Version 3.3, *WordStar Professional*, Release 4.0, and *WordPerfect* in the two 132-column text modes (25- and 43-row) that the Ultra-Grafix VGA can display.

ABOVE AVERAGE In testing, the Taxan Ultra-Grafix VGA ranked above average in its VGA hardware compatibility. Its times in the PC Labs performance tests ranked among the fastest of the boards we tested. In the PC Labs video benchmark tests, the Ultra-Grafix was an average performer. And like the Paradise VGA Plus and Tecmar VGA, the Ultra-Grafix passed six out of eight of the PC Labs VGA compatibility tests, making it one of the most compatible boards that we tested.

Understandably, the Taxan Ultra-Grafix VGA rates as well as the very similar Paradise VGA Plus in VGA compatibility and performance because of the circuitry and chips the two boards share. If you have a VGA-style monitor, the Ultra-Grafix would be a good alternative to the IBM PS/2 Display Adapter. If you have a Multi-Sync-style display, its higher resolution capabilities make it an even better choice.

TECMAR INC.

Tecmar VGA

Building on past success with its Graphics Master, Tecmar has now nailed VGA register compatibility and even higher resolution—up to 800 by 600 pixels in 16 colors—onto its \$395 VGA board. Along the way, the VGA has gathered up all lesser standards, including EGA BIOS compatibility and MDA, Hercules Graphics, and CGA register-level compatibility. The board works with nearly all non-Micro Channel IBM computers and compatibles, including all PCs (except for 64K system board models),XTs, ATs, and the PS/2 Model 30.

The 5.4-inch board misses full VGA hardware compatibility in that it lacks any provision for expansion at all, let alone a VGA Video Feature Connector. The Tecmar VGA is based on a Toshiba VLSI video chip and 256K of 100-nanosecond RAM. Conspicuously absent is the Immos DAC used by IBM and all other clones. Both digital DB-9 and analog DB-15 output connectors are mounted on the card-retaining bracket.

SIX-BANK DIP SWITCH Peeking through a cutout in this bracket is the six-bank DIP switch that's used for setting up

(216) 349-1009
List Price: \$395

Requires: PC, XT, AT, or compatible, or PS/2 Model 30.

In Short: A short card that's register compatible with the VGA standard as well as all major previous video standards and display types. Beyond the VGA standard, the board can achieve resolution up to 800 by 600 in 16 colors.

CIRCLE 692 ON READER SERVICE CARD

the Tecmar VGA. These switches are used to adjust for the monitor that's connected to the board and its default mode of operation. Unlike IBM-standard VGA boards, which automatically adapt to color or monochrome VGA displays, the Tecmar VGA requires that you set one of these switches as well as the single on-board jumper.

Once the host system is booted and running, the operating mode of the Tecmar VGA can be changed with a utility that's supplied with the board. This software enables the board to display text and graphics made by any supported video standard on any monitor that can be connected to it. The program, called VGA, is both command and menu driven, so it's easy to use and yet can be wielded in batch files as well.

Beyond the VGA standard, the Tecmar VGA supports graphics modes with either 800 by 440 or 800 by 600 pixels in 16 colors chosen from a palette of 64. In addi-

■ VGA BOARDS

EDITOR'S CHOICE

• Close but no cigar

If your goal is true VGA hardware compatibility with IBM's Personal System/2, you won't find a winner here. Although all of these VGA boards aspire to it, none really reach it. All of the products we examined suffer from at least one compatibility shortcoming, be it only in smooth diagonal scrolling.

Should you be willing to sacrifice the last iota of hardware compatibility—after all, there's neither guarantee nor threat that any software company will exploit all the VGA features we've tested for—you'll find plenty of good choices.

If you already have a VGA or MultiSync-style display (or regard getting one as an inevitability) and demand a VGA Video Feature Connector as a hardware compatibility prerequisite, try the Compaq, Paradise, Taxan, or Tecmar products; the Compaq (which was an Editor's Choice in the February 16, 1988, issue) is the top choice because of its speed.

If you want to plug your new VGA board into your display and upgrade later (but don't need a VGA Video Feature Connector), choose the IDS, Orchid, Everex, or Tatung. We give the edge to the IDS Intelligent VGA—despite its \$50 price premium—because of its greater resolution potential, won with its 512K RAM.

Only the Sigma VGA/H offers both forward and backward hardware compatibility. If that's what you require, it's got to be your choice.

Because it fell furthest from the mark, we consider the Video Seven VEGA VGA only an enhanced EGA board with VGA BIOS compatibility. And the IBM PS/2 Display Adapter just costs too much.

tion, text modes with 100 columns by 43 or 55 rows and 132 columns by 25 rows are available. The beyond-VGA resolutions require MultiSync-style displays. With VGA-standard monitors, the maximum number of columns in text mode is limited to 120.

To accommodate the advanced resolutions and display modes of its VGA, Tecmar includes several drivers with it, all installable through the VGA program. Among these are drivers for AutoCAD, GEM (Versions 2.1 and 2.2), Lotus 1-2-3 (Releases 1A and 2), Symphony, Ventura Publisher (Version 1.1), and Microsoft Windows (Versions 1.0 and 2.0). Tecmar also includes a GSS*CGI driver that supports several dozen CAD, scientific, engineering, and other graphics programs.

ALL IN ALL The Tecmar VGA turned in average performance in the PC Labs suite of performance and benchmark tests. It passed six of the eight PC Labs VGA compatibility tests, which means it keeps company with the Paradise VGA Plus and Taxan Ultra-Grafix boards. The Tecmar VGA is a very good product, albeit one that lacks expansion abilities. For some people, however, it may not prove to be as convenient as the automatically configuring boards that don't require running programs when switching from Hercules to VGA graphics. In most cases, however, you'll want to install your graphics software for the VGA standard, and you'll never need to switch.

VIDEO SEVEN INC.

VEGA VGA

The board for all seasons—any standard, any monitor, any time—that's what Video Seven's VEGA VGA promises to be. More than that, the \$499 VEGA adds more resolution, colors, and columns to the existing standards and backs it all up with a 3-year hardware warranty.

The VEGA supports MDA, Hercules Graphics, CGA, EGA, and VGA standards down to the hardware register level in any PC (except for 64K system board models), XT, AT, or PS/2 Model 30. Beyond the VGA standard, it offers 752-by-410- and 800-by-600-pixel resolution in 16 colors. In text modes, it permits up to

FACT FILE

VEGA VGA
Video Seven Inc.
46335 Landing Pkwy.
Fremont, CA 94538

(800) 962-5700 (in Calif.)

List Price: \$499

Requires: PC, XT, AT, or compatible, or PS/2 Model 30.

In Short: A short card that's nearly register compatible with the VGA standard as well as all major lower video standards and monitor types. Capable of automatically setting itself for the proper type of monitor and display mode with resolution up to 800 by 600 in 16 colors.

Circle 60 on Reader Service Card

60 lines of 80-column text or 43 lines of 132-column text and up to eight simultaneous downloaded fonts. It lacks only the 640 by 480 MCGA two-color mode of the PS/2 Models 25 and 30.

Not only does the VEGA support all common monitor types up to their resolution limits, but it can also automatically discern between most of them and configure itself appropriately. Similarly, it automatically adapts its hardware mode to that of the software you're running.

COMPACT DESIGN All of these functions are achieved on an 8-bit card that's only 5.4 inches long, able to fit into XT short slots. Two proprietary Video Seven VLSI chips, an Immos DAC, and a handful of surface-mount chips make up its circuitry. Its 256K of memory is rated at 120 nanoseconds.

Strictly speaking, the VEGA is register and not hardware compatible with the VGA standard. In place of the VGA Video

MultiSync II

*The world's best-selling color
monitor, compatible with all
leading graphics standards.*

At NEC, we design our products with a simple principle in mind.

What works well today should work just as well tomorrow.

And the MultiSync® II is no exception. It's a monitor that has
proven itself compatible with all the leading computer systems.

Including the PC/XT/AT/386 (and their 100% compatibles), PS/2
and Mac II. As well as all the leading graphics boards. So as tech-
nology continues to evolve you can be confident that the MultiSync II
will be ready to meet the challenge.

The MultiSync II has an advanced ergonomic design that makes
computing more comfortable. With a smaller footprint, upfront
user controls, tilt-swivel base and a non-glare screen.

Best of all, it's from NEC. The company that not only invented
the technology, but that also insures that your investment in
it doesn't become obsolete. For literature or a dealer call

■ VGA BOARDS

Feature Connector, it has a 32-pin connector that follows the EGA expansion standard. The VEGA also includes a header for an EGA-compatible light pen port.

Both DB-9 and DB-15 connectors for digital and analog displays are supplied. Digital monitors are limited to a 64-color palette even in VGA modes; up to 256 simultaneous colors can be displayed on analog screens. The 752- by 410- and 800- by 600-pixel modes require MultiSync-style displays.

COMPLEX CONFIGURATION Setting up the VEGA can be complex, owing to seven jumper sets and a six-bank DIP switch. The jumpers mostly are for configuring the VEGA to match your system—for instance, matching XT slot 8, changing the base address, and selecting whether you use a color or monochrome monitor. The DIP switches, accessible through a cutout in the card-retaining bracket, match some monitors that VEGA cannot discriminate between, defeat its automatic monitor-matching ability, and select the boot mode of the board between EGA/VGA mode and CGA/MDA mode.

Video Seven includes a general control utility, VEGA, that governs Hercules and CGA compatibility and incorporates a "screen-saver" function that blanks your monitor screen after a predetermined period of system activity. In addition, drivers for AutoCAD and Lotus 1-2-3 (Releases 1A and 2), as well as an enhanced version of ANSI.SYS, come with the VEGA.

In the PC Labs performance and benchmark tests, the VEGA did not distance itself from the pack, turning in performance results that fell within the midrange of the boards we tested. Moreover, it demonstrated several problems when executing the PC Labs VGA compatibility tests and passed only four out of the eight tests. In that its hardware compatibility with the VGA standard is doubtful, the VEGA is perhaps best regarded as an enhanced EGA card that should work with most VGA software and will work with all VGA displays. If you have doubts, its money-back compatibility guarantee should reassure you.

Open your windows faster.

Introducing the Paradise VGA Professional™ card. It gives you faster graphics than you've ever seen before.

Faster text. Even faster scrolling.

In fact, the VGA Professional is up to 400% faster than IBM's® PS/2™ Display Adapter.

That's a serious headstart for your sales, marketing and financial reports.

The secret of our speed demon is a new 16-bit bus and 16-bit BIOS with AutoSense™ that rush your information through the video controller to the screen.

And delivers 256 colors simultaneously in 640 x 480.

Or a big 132-column spreadsheet at a single glance.

And the VGA Professional card fits perfectly into your PC, AT™ or XT™ machine, as well as the PS/2 Model 30 and compatibles.

Call (415) 468-6692 and we'll tell you more about the new VGA Professional.

It's an open and shut case for better productivity.

VGA

Princeton's Very Good Answers.

Without question, Princeton's PSC-28 and PSM-03 monitors will bring you the ultimate in VGA performance. Princeton was the first to offer truly compatible VGA dedicated monitors. Our PSC-28 is a 770 x 570, .28mm dot pitch, high resolution analog color monitor that can display an infinite number of colors. The PSC-28 also features a convenient color button for green, amber or cyan text. The PSM-03, a high resolution analog monochrome monitor gives you outstanding 800 x 630 resolution, and the ability to display infinite shades of gray. Plus sharp crisp graphics and character definition from its dynamic focusing circuitry.

Both monitors are compatible with IBM PC*, XT*, AT*, PS/2, Apple Macintosh SE* and compatible personal computers. Each gives you full compatibility with the leading VGA adapter cards including the QuadVGA and VEGA VGA. So if VGA meets all your needs (and you don't require the additional flexibility of our famous ULTRASYN and MAX-15 autosynchronous monitors), investigate the cost/performance value of the

PSC-28 and PSM-03.

Unsurpassed quality, service and performance make it hard to beat Princeton monitors. We offer better value than our competition. We call it the Visible Edge. For answers to all your questions about VGA compatible monitors, contact us at 601 Ewing Street, Building A, Princeton, New Jersey 08540 (609) 683-1660, x 811.

PC COMMUNICATIONS

Script languages put the power of programmers' tools behind your communications tasks.

COMES OF AGE

The process of transferring files from one PC to another is not the black art it once was. While programmers continue to dabble in protocol development, users have at their disposal an increasing number of tools and features aimed at making file transfers easier and more efficient.

A new generation of software has emerged to redefine the high end of the communications market. First on the scene were *Ascom IV*, *Relay Gold*, and *Relay Silver*, which supplemented the structure and command logic of their predecessors with new levels of functionality. Then came *Smartcom III* and *Crosstalk Mk.4*, sporting familiar names but bearing little resemblance to their older siblings. Two features in particular define this new generation of communications software: multitasking (that permits multiple communications sessions (as in a multiuser bulletin board), background file transfer (while running another applications program), or both; and a script language that can rival programming languages for versatility.

In this issue we examine 21 programs with script languages you can use to automate your communications or even build new features into your system.

DESIGNER COMMUNICATIONS

The programs we reviewed—*Ascom IV*, *BitCom*, *Boyan*, *Crosstalk Mk.4*, *Crosstalk XVI*, *Freeway Advanced*, *HyperAccess*, *Lync*, *MEX-PC*, *Mirror II*, *ProComm*, *ProComm Plus*, *Professional-YAM*, *Ptel*, *Qmodem*, *Relay Gold*, *Relay Silver*, *Respond!Async*, *SideTalk*, *Smartcom III*, and *Softerm*—range in price from \$35 to \$250 and offer robust script languages that are suitable for general-purpose communications and that include commands for flow

control and error handling. We did not look at programs with limited script languages that do little more than log on to a system.

Script languages fall neatly into three categories: minimal, advanced, and new-generation. Minimal script languages (such as those in *Boyan*, *Crosstalk XVI*, and *ProComm*) have relatively few commands and tend to be weak on flow control, error handling, arithmetic, file handling, and text manipulation. They will let you create scripts for straightforward communications tasks—such as logging on to a system or requesting information and capturing it to disk—but won't let you undertake an elaborate project like building your own bulletin board or set of menus.

Advanced script languages, like those in *SideTalk* and *HyperAccess*, are best thought of as communications-oriented programming languages, somewhat like *dBASE's* database-oriented programming language. Most will let you build your own bulletin board or menus.

New-generation script languages are

■ COMMUNICATIONS SOFTWARE

the territory of the ground-breaking products like *Crosstalk Mk.4*, *Ascom IV*, *Smartcom III*, *Relay Gold*, and *Relay Silver*. They possess advanced script languages but also have more commands, so a given task can often be accomplished in fewer programming steps. *Smartcom III* even furnishes an on-line dictionary of commands and command syntax as an aid for writing scripts.

Many of the programs in all three categories offer a learn mode that creates scripts by recording both the user's keystrokes and the other system's response.

SPEED AND PROTOCOLS Script languages are undeniably useful but, when making a purchase, you must also be aware of the importance of protocols. More and better public-domain protocols are becoming widely available.

The ubiquitous Xmodem protocol is the only common tongue among communications programs, although Xmodem with CRC error checking tends to be more reliable, especially on noisy lines. However, Xmodem-CRC is marginally slower than standard Xmodem, so for transferring text on quality phone lines, Xmodem is probably the better choice.

Other Xmodem and Ymodem protocols offer batch file transfer and larger block size for faster file transfer. But if you need these, keep in mind that not everyone agrees on the names for these variations, which gives rise to some confusion. (For more information on protocols, see the diagram "Know Your Protocols.")

PROPRIETARY PROTOCOLS Several of the products we reviewed offer some noteworthy proprietary protocols. *HyperAccess*, for example, uses one that is optimized to work with high-speed modems but that, thanks largely to its data-compression techniques, offers impressive file transfer even at lower speeds. *Relay Gold* and *Relay Silver* furnish a proprietary protocol that can transfer files in both directions at once and still allow keyboard communications between systems.

Whether you're looking for lots of power and sophisticated features or ease of use and low price, you can probably find what you need among the products reviewed here.—M. David Stone

***** Ascom IV

Ascom IV, a \$195 program from Dynamic Microprocessor Associates, is an old-timer among communications programs—its roots go back to CP/M. It doesn't sport the most modern accoutrements, but it is mature, solid, and compact enough to run from floppies.

To install, you copy the program to a hard disk and define the parameters of your communications environment. You can save configurations to files with different names, making it easy to maintain several different methods of connecting to a service. Similarly, you can specify an *Ascom IV* script for each entry in the dialing directory. This gives you flexibility in structuring your communication configurations. *Ascom IV* directly supports a wide variety of modems. There is a provision for enabling error correction, but only on Robotics and Microcom modems.

Ascom IV lets you list a series of files to either transmit or receive. It will process your lists sequentially, which can tremendously reduce the manual intervention needed to send multiple files. The program even checks to see that you won't over-

write a file on the receiving side and that the files exist on the transmitting side. *Ascom IV* maintains a log of all files received or sent and the status of the transmission (whether it was successfully transferred and, if not, why not).

Ascom IV uses function keys to navigate from mode to mode. The program usually displays the available function keys to remind you of your options, but not always: in some situations you simply have to remember the appropriate commands. A status line displays assorted messages; there's also a good, context-sensitive on-line help facility.

The terminal emulations include VT52, VT100, VT220, IBM 3101, ADM3A, Hazeltine 1500, Televideo 912, Data General Dasher 200 and ADDS Viewpoint. Similarly, the program supports a bountiful assortment of file-transfer protocols that include Xmodem, Xmodem-CRC, Xmodem 1K, Ymodem batch, and Kermit, as well as several proprietary protocols such as *Ascom IV*, Block, BlockV, and HSModem for high-speed modems with error-checking hardware.

Ascom IV comes with log-on scripts for several commercial services; however,

FILE TRANSFER : LOG							
#	FILENAME	TRANSFER STATUS	FILE SIZE	RE-TRY	START TIME	XFER TIME	DATE
1	APPRK.COM	RECEIVED	1792	0	12:03	00:28	12/27/87
2	APPRK.COM	RECEIVED	1792	0	14:03	00:12	12/27/87
3	ASC.COM	R-OPABORT	0	2	14:03	00:09	12/27/87
4	ASC.COM	RECEIVED	1288	0	14:04	00:08	12/27/87
5	DDIR.COM	R-OPABORT	0	1	14:04	00:05	12/27/87
6	DDIR.COM	RECEIVED	896	0	14:05	00:07	12/27/87
7	APPRK.COM	RECEIVED	1712	0	14:10	00:21	12/27/87
*** END OF LOG ***							
View F3: Receive (OUR UP): Scroll Log Up (End): Exit							
Log F4: Transmit (OUR DWN): Scroll Log Down							
Alt-F1=MENU Alt-F2=CHGC Alt-F3=DIAL Alt-F5=TERM Alt-F6=CHMS Alt-F7=FILE							

One of *Ascom IV*'s neatest features is a transaction log that saves information on all the files transmitted or received and notes whether each transfer was successful. The program even ascertains whether your transmission is overwriting a file on the receiving side.

and receiving messages. You can specify passwords, mailbox IDs, and one of three privilege classes for each approved caller. The highest priority class can gain access to *Ascom IV*'s internal DOS-like commands and can therefore send and receive files as well as messages.

The *Ascom IV* script language is more like assembly language than, say, BASIC or C. Hex constants are used, control characters must be inserted manually for return and line feed, and so on. As such, it's not as easy to learn or use as some other script languages. It's not particularly arcane or difficult if you've programmed before, but the novice may find *Ascom IV*'s script language tough sledding.

The language includes easy time and date manipulations, versatile communications and configuration commands, and very flexible file input/output commands. You can move within *Ascom IV*'s menu structure and modes and input or output to the screen or printer.

A reasonable assortment of DOS-like disk commands is available for file management. You can program subroutines, but the primary flow-control mechanism is via a comprehensive assortment of IF commands and GOTOs. This results in a lot of jumping around in the script code.

Scripts are parsed and compiled as they are loaded. You can precompile scripts if you wish and thereby speed up loading.

There are some oddities. For example,

■ **With *Ascom IV* you can precompile scripts if you wish and thereby speed up loading.**

the manual refers to 300- or 1,200-bit-per-second modems, as if it hadn't been updated since 2,400-bps modems became widely available and inexpensive. Also, there are some errors in the script language examples. None of the rough edges were disabling, but we were surprised to see them in such a mature product.

Ascom IV offers a flexible script lan-

these only serve to get you logged on—no scripts to automate downloads or navigate through commercial services, for example, are supplied. The scripts included with some other advanced communications programs are far more sophisticated.

Ascom IV has its own editor for modify-

ing scripts and for composing messages. One problem is *Ascom IV*'s consistent use of the End key to terminate operations. Although most editing commands are mnemonic, most PC editors use Home and End to move to the beginning and end of a line—a sure recipe for disaster in the *Ascom IV* editor. A few other commands aren't standard or easy to remember and aren't prompted anywhere on the screen (for instance, F6-Ins to insert a line). The files produced are standard ASCII, so you could use your own editor, but there aren't any provisions within *Ascom IV* to specify another editor as the default.

Ascom IV includes translation and filtration of both incoming and outgoing characters. An ASCII-to-EBCDIC configuration with the translation for this often-necessary mainframe conversion is supplied with the program.

SIMPLE FILE FOR BBS *Ascom IV* includes a much simpler script file to implement a modest bulletin board for sending

Know Your Protocols

From X to Z: a primer on what to expect—and what not to expect—from the protocol you're using.

Xmodem, Ymodem, and Zmodem protocols—with their variants, their similar names, and the debates over which name really goes with which protocol—can be a source of confusion in otherwise simple communications. Here's the lowdown on these protocols—what they are, what they do, and how they appear under other names. — **M. David Stone**

Xmodem

Xmodem is the common standard among communications programs. Every program reviewed here offers some version of Xmodem, which can fall back to checksum error checking.

SENDER

Gets command to send, awaits prompt from receiver

Sends 128-byte block, 1-byte checksum

Sends next block

After last block, sends End of Transmission message

RECEIVER

Gets command to receive, requests checksum, sends message to start

Computes checksum, compares, acknowledges

Computes checksum, compares, acknowledges

Acknowledges

Xmodem-CRC

Xmodem-CRC (cyclic redundancy checking) is still around in versions with no fallback to checksum error checking, but most programs with Xmodem-CRC can fall back to checksum. With such programs, the receiving side requests CRC error checking, and then asks for checksum if it doesn't get a block in response to its first request.

SENDER

Gets command to send, awaits prompt from receiver

Sends first 128-byte block, 2-byte CRC

Sends next block

Sends last block with End of Transmission message

RECEIVER

Gets command to receive, requests CRC error checking

Computes CRC, compares, acknowledges

Computes CRC, compares, acknowledges

Acknowledges

Xmodem 1K

Xmodem 1K is widely known as Ymodem, although Chuck Forsberg, creator of Ymodem, insists that true Ymodem includes a batch file feature (see Ymodem batch). By either name, Xmodem 1K sends larger data blocks and thus allows faster transfer over good phone lines. In theory, Xmodem 1K can use CRC or checksum error checking, and any combination of 128-byte blocks and 1K-byte blocks. Actually, some versions of Xmodem 1K do not fall back to checksum error checking, and some will not accept 128-byte blocks.

SENDER

Gets command to send, awaits prompt from receiver

Sends first 1,024-byte block with 2-byte CRC

Sends second block

After last block, sends End of Transmission message

RECEIVER

Gets command to receive, requests CRC error checking

Computes CRC, compares, acknowledges

Computes CRC, compares, acknowledges

Acknowledges

Ymodem batch

Ymodem batch (Ymodem, according to Forsberg's definition) is equivalent to Xmodem 1K with batch file transfer. This protocol sends a header containing the filename along with the file itself. In some implementations, the header also includes the file size and date. (Otherwise, the file date becomes the date of transfer and the size is rounded up to a multiple of the block size.)

SENDER

- Gets command to send, awaits information from receiver
- Sends filename and other header information, 2-byte CRC, and first 1,024-byte block
- Sends next block
- After last block, sends End of Transmission message
- Sends filename and other header information, 2-byte CRC, and first 1,024-byte block
- After last block, sends End of Transmission message
- Sends null pathname to indicate no more files

RECEIVER

- Gets command to receive, requests CRC error checking
- Computes CRC, compares, acknowledges
- Computes CRC, compares, acknowledges
- Acknowledges; requests next file with CRC error checking
- Computes CRC, compares, acknowledges
- Acknowledges; requests next file
- Acknowledges

YmodemG

YmodemG is a streaming protocol, built around the philosophy that no news is good news. It sends the entire file before waiting for an acknowledgement. If the receiving side detects an error in mid-stream, it aborts the transfer. YmodemG is not an error-correcting protocol; it is designed for use with high-speed modems, which have built-in error-correcting protocols.

SENDER

- Gets command to send, awaits prompt from receiver
- Sends first filename and other header information, 2-byte CRC
- Sends first 1,024-byte with block 2-byte CRC; sends second block; after last block, sends End of Transmission message
- Sends second filename and other header information
- Sends first and subsequent blocks; after last block, sends End of Transmission message
- Sends null pathname to indicate no more files

RECEIVER

- Gets command to receive, requests streaming option with CRC error checking
- Gives message to continue
- Acknowledges; requests next file with streaming option and CRC error checking
- Gives message to continue
- Acknowledges; requests next file with streaming option and CRC error checking

Zmodem (full streaming)

Zmodem is a streaming protocol that allows for error correction and error detection. The receiver can interrupt to request retransmission of garbled data. Zmodem is fast and is reliable on poor lines. If a link is broken during a transfer, Zmodem can redial and pick up the transfer without having to start over. Zmodem also includes file-management capabilities.

SENDER

- Sends Ready message, calls receiver
- Sends list of options to use, as well as header information
- Sends data header, data subpacket 1, and subsequent subpackets, followed by End of Transmission message
- Sends list of options to use, as well as header information
- Sends data header, data subpacket 1, and subsequent subpackets, followed by End of Transmission message
- Sends End of Files message

RECEIVER

- Tells sender which options the receiver possesses
- Tells sender to start transfer
- Acknowledges file; requests next file
- Tells sender to start transfer
- Acknowledges file; requests next file
- Acknowledges

■ COMMUNICATIONS SOFTWARE

guage and interesting and useful features (especially the multiple file specifications and transfer log). Its user interface is not as slick as that of some competitors, but it's workable. Its documentation is dry but complete. Overall, it's more suited to experienced users.—Glenn A. Hart

***** BitCom

If you bought a modem recently, you may have found a copy of *BitCom* at the bottom of the box. Fourteen modem distributors are bundling the program with their products, but even if *BitCom*, Version 3.5, doesn't come free to you, it's a good value at its list price of \$69.

Version 3.5, a menu-driven program with a script language powerful enough to automate most communications tasks, is easy to start and easy to use. It supports the full Hayes command set, as well as transmission rates of 110 to 19,200 bits per second. It has built-in buffers and Xon/Xoff flow control, and its vendor, BIT Software, claims compatibility with 386 machines and the PS/2 series.

To get started, you copy *BitCom* onto a backup or, preferably, a hard disk, then enter "bitcom" at the DOS prompt. An opening menu presents four selections: go to the telephone directory, invoke a Script file, change the program's configuration, or issue a DOS command. Although *BitCom* does not come with a tutorial, it does

During communications you can use the options menu to send or receive files, and BitCom will prompt you for the filename and allow you to change the protocol. You can automate this process by assigning send/receive commands to function keys.

offer context-sensitive on-line help on the F1 key, with complete information about the current screen and all selections and parameters. You'll find available operations indicated at the bottom of each screen.

You can keep as many as 32,000 listings, with phone numbers as long as 40 digits, in the directory. You invoke function keys and follow the instructions that appear on the screen to add or delete numbers. Other fields can be changed from default values as necessary, and you can edit the parameters at any time—even during a connection. For most fields, *BitCom* offers a series of appropriate values that are rotated or toggled by using cursor keys.

BitCom will redial until a connection is made. You can write a script to link numbers, so that if one is busy the next will be dialed. You can also dial from the DOS prompt and bypass the menus by entering "bitcom" and the record ID.

Once the connection is made, hitting the F2 key brings up an options menu, where you can choose to send or receive a file, change parameters, issue a DOS command, invoke a script file, or disconnect. You can specify a filename and capture the session, or you can save a screen snapshot

with the press of a function key.

BitCom will allow you to change protocols before sending or receiving a file. After you enter the protocol and a pathname, the transfer begins. If you wish, you can automate the process by assigning file send/receive commands—including a

■ *BitCom* features a script language powerful enough to automate most communications tasks.

prompt to request the pathname—to function keys. Some of the protocols *BitCom* supports include Xmodem with checksum, Xmodem-CRC, relaxed Xmodem, Xmodem IK, Ymodem batch, and (new in Version 3.5) Kermit.

RUNNING APPLICATIONS If you invoke DOS, commands are executed in a DOS shell rather than from within *BitCom*, and when finished you must hit the

- B: > Mmm.

It's More Than Just Two PCs Talking In The Night.

It's Totally Automated, Unattended File Transfer and Remote Control. And you don't have to be a programmer to use it.

If you've ever tried to use a "standard" communication program to create script files for automated, unattended PC-based communications, you'll really appreciate CCEXpress from Meridian Technology, makers of Carbon Copy Plus.

And if you're not a communications expert, that's fine. CCEXpress allows you to easily create task lists that activate your computer at a later time. You can update data files or remotely execute programs—at night—when telephone rates are low and computer usage is at a minimum and you're busy doing something important—like sleeping.

CCEXpress is ideal for branch offices or other remote locations that regularly need

to transfer data or update programs with other PCs. Using unattended remote emulation you can do the same with minis or even mainframes. Of course, since CCEXpress is optimized for unattended operation, it includes special features such as error recovery, results log, data encryption and password security.

So if you're looking for an easier, more cost-effective way to transmit large amounts of data, take a closer look at CCEXpress. And let your computer work while you sleep!

■ COMMUNICATIONS SOFTWARE

Enter key to return to the communications screen. You can select the DOS option and run a program during a communications session, but you cannot do so while transferring a file.

BitCom distinguishes Action files (which are invoked automatically to perform tasks after a connection has been made) from Script files (which control when to call a number, how many times to retry, and what to do if the connection is or is not established). You can use a Script file to make the connection, and an Action file will then be invoked if it is specified in the parameters. These files cannot be created within *BitCom*, which does not have a text editor. Automatic log-on to a host requires an action file to be invoked. If your log-on involves a password, it unfortunately can be seen by anyone who accesses the file from the DOS prompt.

The script language offers more than 80 functions and allows you to nest as many as eight subroutines. While basic communications functions are simplified by the menus, script files allow *BitCom* to be set up for people who don't want to learn a communications program. Prewritten script samples are included for dialing numbers, for receiving and sending files (including selection of protocols), for logging on to an information service (specifically CompuServe), and for automatic answering. These examples cover the major functions of the program, and they are made even easier by the manual, which includes a list of the files on the disk.

The manual does not discuss more-sophisticated applications such as making multiple unattended contacts with file transfers or screening callers for passwords, but it does refer you to the samples for guidance in accomplishing these and similar functions. The script language can handle a wide variety of tasks involving conditional statements, function calls, and responses to your input at prompts. Clever use of the script will expand *BitCom*'s powers substantially, but if you really need these applications, you might want to find a program that includes them.

We found documentation on the script language more suited to the experienced user than to the beginner, and certain key bits of information were not in the manual. Nowhere, for example, could we find

which bps rates were available in *BitCom*.

BitCom is not difficult to learn, which makes it very useful to novices and those who need a communications program to execute standard tasks, but its script language may not be rich enough to satisfy more-advanced users.

—John Schoenbeck

Boyan

College student Justin Boyan and his 335 communications program named *Boyan* justify one of our most cherished beliefs: once in a while, out of the blue, a little guy can come up with a good product and make a buck at it. Distributed as shareware, *Boyan* is a top-quality package for the budget-conscious.

In these days of inflated program size, *Boyan*'s requirements seem minuscule. It can run on a system with only one disk drive. Laptop users will applaud its small appetite.

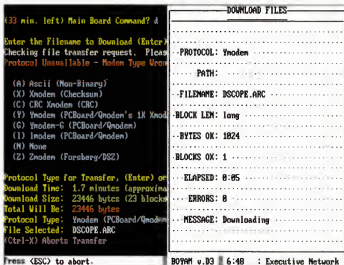

The program consists of two files: *BOYAN-D3.EXE*, which "unarchives" itself into all the files you'll need to run *Boyan*, and *BOYAN-D3.DOC*, the 60-

page manual. We had it up and running in less than 20 minutes—without consulting, or even printing out, the manual.

The sign-on screen reminds you that the author is just a starving student and you really ought to send him the measly \$35 fee if you haven't done so already. Next, you drop right into terminal mode. As this screen informs you, you can press Ctrl-Home to get one of the 16 context-sensitive help screens.

Hitting Alt-C brings up the configuration menu. *Boyan* supports Hayes-compatible modems by default, but you can modify all the command and response strings to match those of practically any other modem. (*Boyan* supports modem speeds only up to 9,600 bits per second and only on COM1 or COM2; if you plan to use that wild new 115,200-bps modem on COM3, you'll have to find another communications program.)

Unlike some programs, *Boyan* automatically sets the character length to 7 bits if you're using even or odd parity, and 8 bits if using no parity. These combinations are the most common, but we'd prefer to have the option of setting the two parameters separately.

After you hit PgDn for a file download, *Boyan* scans the screen buffer for the name of the file you're downloading to save you from typing it twice. On the left of the screen are the protocols the program supports.

8MB and Ports for the PS/2 Model 30

On April 2, 1987, IBM brought the world to a standstill when it brought the PS/2 to life.

Now while everyone else waited to see how this latest offspring would be accepted, we quietly set out to create products that would help the PS/2 reach its fullest potential. And two months later, we delivered.

In fact, we were the first to devise completely functional local and remote links between the PS/2 and System 3X minicomputers. First to offer local

and remote gateway communications for the PS/2 on a local area network. And first with a Micro Channel® board that adds up to 12 megabytes of memory.

Our list of firsts didn't start with the PS/2, either. For example, we pioneered the industry standard in backplane design for multifunction boards. And we were the first to fully apply surface mount technology, which allowed us to put all the basic computing functions onto one PC board. (Interestingly enough, a year later IBM

es birth to a new PC, to send out cards.

used surface mount technology to create the PS/2.)

The ability to conceive products quickly stems from our corporate commitment. Since our inception in 1982, our goal has been to do more than enhance IBM's personal computers. It's been to truly advance them. Our in-house research and development team meets this goal so well, it continually develops PC enhancement products before IBM does.

We're IDEA. And if you want to find out what's really happening with IBM's personal computers, call us at 1-800-257-5027. We'll be the first to tell you.

■ COMMUNICATIONS SOFTWARE

Most *Boyan* commands are easy-to-remember mnemonic Alt-key combinations, like Alt-D to dial and Alt-H to hang up. In fact, *Boyan*'s user interface was strongly influenced by the *PC-Talk/Modem/ProComm* school of communications program design; users familiar with those programs should have little trouble with *Boyan*.

You make some trade-offs when you buy software for \$35. With *Boyan*, the trade-off is support; there's no staff to answer calls. *Boyan* himself and other users polled over a bulletin board will be your primary support. Of course, *Boyan*'s ease of use mitigates this trade-off.

DIALING The dialing directory holds up to 200 phone numbers, each of which can call a script file to automate the log-in process. While you can sort the directory according to name, you have to specify the number (1 to 200) for the computer you want to call. As you might expect from shareware, *Boyan* includes predefined log-in scripts for RBBS, PC-Board, and other BBS systems but not for commercial services like CompuServe and MCI Mail.

If a number *Boyan* dials is busy, *Boyan* throws it on the redial queue. If you regularly check in to several services, you could log in to the available ones, with the busy numbers on the queue waiting to be redialed. When you activate redialing, *Boyan* calls each number on the queue in turn until it has made all the connections. When it makes a connection, *Boyan* beeps loudly to call you back to the computer.

NEAT TRICK To download a file, you just press PgDn. Since *Boyan* scans the screen buffer for the name of the file you're downloading, you don't have to re-enter the filename—a neat little trick that other programs should adopt.

Boyan supports the Xmodem, Xmodem-CRC with fallback, Ymodem (Xmodem-1K), and Ymodem-G (streaming Xmodem-1K) protocols. It can also use external protocol programs, like DSZ for Zmodem or PC-Kermit for Kermit, to upload and download files using those protocols. *Boyan* was one of the better performers on the PC Labs performance tests for Xmodem transfers.

Boyan has powerful script and macro languages. Most of what other communications programs store as simple strings *Boyan* stores as a macro. This feature enables you to build fancy macros to accommodate unusual modems and phone systems. The more than 100 macro commands enable you to do almost anything you can do from the keyboard.

To *Boyan* a macro is a one-line program, and a script is just a file of macros strung together. Scripts can include branches to labels. Macros are recursive. Unlike *Crosstalk Mk.4*'s CASL and *Smartcom III*'s Scope, *Boyan*'s terse script language lacks support for general-purpose programming, but it handles basic communications tasks easily and well.

Boyan's "scrollback buffer" makes your on-line life easier by saving data that scrolls off the top of the screen. Other nifty *Boyan* features include its DOS file manager and its Gossip mode, which divides the screen into separate windows for incoming and outgoing data, making it easier to hold a "conversation" on-line. And *Boyan*'s wonderful "backspace editor" steals from the screen buffer the line you were typing on-line and lets you edit it.

But *Boyan* is not perfect. It doesn't support multiple sessions, terminal emulation, or remote operation. The generally good manual, while including both an index and table of contents, could use additional and more-complex examples of scripts, and a better explanation of the script language.

Still, *Boyan* is pretty impressive. Yes, it has more than a passing resemblance to Datastorm's *ProComm* shareware program, which has features, such as terminal

emulation, that *Boyan* lacks. But *Boyan* is easy on you as well as your budget, and in the tough world of communications, that kind of comfort counts. —Howard Marks

***** Crosstalk Mk.4

Crosstalk Mk.4 is the powerful successor to *Crosstalk XVI*, but the relationship between the two does not extend far beyond their names. Priced at \$245, DCA/Crosstalk Communications' *Crosstalk Mk.4* is targeted at sophisticated communications users who require multiple communications sessions using combinations of modems, direct connections, and other devices. Its programming language, CASL (Crosstalk Application Script Language), also makes *Crosstalk Mk.4* appealing to power users.

Crosstalk Mk.4's user interface and clean, uncluttered screen are vastly different from what you'll find in *Crosstalk XVI*. If the communications parameters require some alteration, you can call them up through menus or by using an Alt-key combination.

Crosstalk Mk.4 comes on two disks. Its manual leaves a bit to be desired. Installation instructions say to place the disk marked *Crosstalk Program Disk* in drive

Although Crosstalk Mk. 4 is targeted for users who require multiple communications sessions using combinations of devices, the program includes an easy-to-use learn mode that enables creation of scripts for often-used communications services.

A.; but neither disk is so marked, and menus are identified by inexact names. Support is not toll-free, and the number is often busy, but the technical service is ex-

■ **Crosstalk Mk.4's** power becomes evident when using the X.PC modem driver, which can handle up to 15 communications sessions on a single modem.

cellent once you reach it. On-line help is available, but not when you are running a script file.

Crosstalk Mk.4 contains 29 prewritten scripts and includes an easy-to-use learn mode, which you invoke by typing Do Learn at the command line. Crosstalk Mk.4 builds the script file, and you can edit

other enhancements into it or even write a script to invoke one of the prewritten scripts.

DAZZLING DISPLAYS The CASL script language borrows from Pascal and BASIC. Scripts can reference line numbers or labels and use English-like commands and statements. The scripts you create with CASL can handle multiple communications sessions and dazzling screen displays that include such features as painted windows.

Crosstalk Mk.4's power becomes evident when using the X.PC modem driver, which can handle up to 15 communications sessions on a single modem. You can even create a rudimentary BBS. But once compiled, Crosstalk Mk.4 does not allow a script to be decompiled. If Crosstalk Mk.4 encounters a compiled script with a date and time earlier than a source script, it assumes changes have been made and will recompile the script. If an error is encountered during the compilation, Crosstalk Mk.4 describes the error; gives you the name of the script, the line number, and the actual line; and lets you edit the line before continuing compilation.

Crosstalk Mk.4's DART file-transfer

We have one thing to say to the people who keep getting personal about PROCOMM PLUS.

"Right now, PROCOMM PLUS is the definitive telecom program and the one I personally use and recommend."

John C. Dvorak,
columnist, PC Magazine

People who review software have a very tough job. They see hundreds of new programs every week. But the ones who have seen the new PROCOMM PLUS communications software are doing more than writing rave reviews about it. They're getting personal. They're using it at work and at home.

Maybe it's because PROCOMM PLUS is so easy to use it's "intuitive." Or perhaps it's because PROCOMM PLUS has an extremely powerful script command language, context-sensitive help, 16 terminal emulations with keyboard re-mapping, 12 file transfer protocols, a fully-automated dialing directory, and advanced host mode with electronic mail.

But one thing is for certain. If PROCOMM PLUS is the personal choice of the people who review software, you can be sure that PROCOMM PLUS is right for you.

It's time you got personal about PROCOMM PLUS. Ask for PROCOMM PLUS at a dealer near you. Or, call 314-474-8481.

Thank You.

●—Indicates Editor's Choice ●—Yes ○—No

*Professional-YAM offers three versions of each of these protocols

**Professional-YAM offers five versions of this protocol.

protocol comes in handy if the communications link is disconnected during a file transfer. If you later connect and redo the transfer, DART picks up where it left off. This is especially beneficial when transferring very large files.

Crosstalk Mk.4 is a powerful but challenging program. If you want CASL and plan to transfer large files, it is a very attractive program. But if ease of use is a concern, you might want to investigate other packages.—**Michael Brown**

***** Crosstalk XVI

Although *Crosstalk XVI* hasn't been updated in over a year, it is certainly not an orphan program. It is still being actively marketed by DCA/Crosstalk Communications, and there is no hint that support for the \$195 package will wane. However, with the birth of the new, improved *Crosstalk Mk.4*, *Crosstalk XVI* may find itself quickly assuming the status of an unwanted stepchild.

Crosstalk XVI has always had an interesting place in the communications market. Users who want to get a taste of programming usually find *Crosstalk XVI*, with its straightforward script language, a good place to start. And if you'd rather not deal with a programming language, the product will shield you from what is going on behind the scenes. But those who use more-sophisticated applications that demand a complex language structure will want to look elsewhere.

INTRODUCING SOMETHING YOU'VE ALWAYS WANTED IN YOUR COMMUNICATIONS SOFTWARE.

EVERYTHING.

NEW RELAY GOLD 3.0

RELAY Communications announces the most comprehensive PC-to-PC and PC-to-mainframe communications software program ever. New RELAY Gold® Version 3.0.

When Jim Seymour described RELAY Gold in PC Week (September, 1986) he said it was "probably the fastest and classiest communications program ever written . . ."

And now, RELAY Gold is even faster. In fact, with the addition of CommPressor™ data compression, file transfer will be up to three times faster allowing more work to be accomplished in less time.

When InfoWorld gave RELAY Gold four disks in their January, 1986 review they called it "... a program that will fill the needs of the novice telecommunications user and yet keep up as your level of sophistication grows." Today RELAY Gold is even more flexible to help corporations standardize on one communications solution: Unparalleled mainframe connectivity. New terminal emulation compatibility. And a network version that lets you save on equipment costs by sharing modems.

When PC Magazine named RELAY Gold Editor's Choice in May of 1987, it said "RELAY Gold's [script] language is among the most sophisticated of any communications program." And now our script language is even more powerful. It allows scripting of simple or complicated procedures so a single keystroke can perform entire tasks—it will even write your scripts for you.

When you want one communications program that gives total software 3270 emulation; error-free transfer of any file with a mainframe; a standard interface whether you're connecting through protocol converters, 3270 emulation boards or normal phone lines; background capabilities so you can get other work done while you transfer files and a whole lot more, just ask for RELAY Gold 3.0.

You'll get everything.

■ COMMUNICATIONS SOFTWARE

simple sign-on, *Crosstalk XVI*'s language is useful. It is flexible enough to supply many of the options needed for simple business use, including the ability to wait for and reply to on-line prompts, to wait for a specified time and then run the script, to accept and process keyboard information, and to conditionally jump to other parts of the script.

SCRIPT TRICKS Novice programmers will find that there are advantages to dealing with a program that has been around as long as *Crosstalk XVI*. Because of its popularity, there are quite a few script tricks (unfortunately not mentioned in the manual) circulating around the user network. For example, *Crosstalk XVI* by itself has no function to allow you to operate your computer remotely outside of a few simple communications features. (In fact, the XDOS command, which exits the program, can be accessed when you are talking remotely with the computer—with the result that you place your remote computer in DOS and out of contact.) However, you can persuade the program to do so using a short batch file, which was recommended to me by a *Crosstalk* technician (for more information, see *Power User, PC Magazine*, October 27, 1987).

It would have been helpful if DCA had included some of these tips in the manual, which, like the program, has not been updated for some time. However, the technical support staff at DCA is knowledgeable and helpful; in addition, there is now a *Crosstalk* SIG on CompuServe that users who have questions can access.

Unfortunately, *Crosstalk XVI*'s own help facilities leave something to be desired. There is a Help function that lists the commands available; for more information, you type Help and the command you are inquiring about. But if you are uncertain about which command will, say, let you upload using Xmodem, you will have to do a great deal of guessing.

You will find many users who still swear by *Crosstalk XVI*, and if you're looking to purchase a communications program for the first time—or if you've got a friend who's accumulated a lot of *Crosstalk* scripts—and don't need anything particularly exotic, you may want to give this one a glance. But be warned. When I

pressed DCA's technical staffers on questions about a couple of PC Labs' more-elaborate applications tests, their reply went something like this: "Well, we probably could figure something out eventually, but we'd really have to put the program through loops to get it. I'm sure that *Crosstalk Mk.4* does it, though . . ."

—Barbara Krasnoff

Freeway Advanced

Freeway Advanced, from Kortek, brings fully functional communications to the novice. To the power user it offers a *Crosstalk*-compatible script language, a key-stroke learn feature, terminal emulation (VT-100, VT-52, TTY), and support for several protocols. But somewhere in between things bog down. If you're a beginner who wants to work up to power user status, you may not find all the tools you'll need in this \$139.95 package.

Getting up and running is easy. The documentation is well organized, if at times sketchy. Nevertheless, those who want to skip the basics will appreciate a section called "Three Test Drives," in which the most important parts of the pro-

gram are discussed. Novices will find a useful section called "Everything You Ever Wanted to Know About Computer Communication, but Were Afraid to Ask." There are also sections on troubleshooting that outline the difficulties you might encounter and corrective actions that you can take when you do.

POINT-AND-SHOOT APPROACH

Freeway Advanced's menus are easy to follow and use. They employ a point-and-shoot approach that keeps keystrokes to a minimum and helps a novice stay on track. Context-sensitive help is also available. You simply type "?" to call up a clarification of a function. There is also a handy autopilot feature that "learns" steps in functions that are performed often.

Passwords can be set for a phonebook entry and its accompanying autopilot, as well as for remote access to your system. Remote-access passwords are encrypted and hidden in one of the system files.

Freeway Advanced can work at speeds up to 115,200 bits per second, and modem parameters can be set and changed at any time. The program supports the following protocols: Xmodem, Xmodem 1K, Ymodem batch, Kermit, and *Crosstalk*.

Freeway Advanced's point-and-shoot menu-driven structure lets you see exactly where you are. In the above screen, the user is editing a phonebook entry.

Freeway Advanced organizes phone numbers into nine phonebooks with 12 entries each. With each entry you can specify bps rate, parity, terminal type, and data format. You place a call by simply dialing automatically from the phonebook. You can set the number of times the system will redial, as well as the time intervals between the redials.

The chapters in *Freeway Advanced's* manual are brief, and many features are either not covered completely or not covered at all. Complicating the situation is the fact that changes were made to the program after the documentation was published. Help is available from a Read Me file on the floppy disk, but it is a nuisance to abandon your project and repeatedly consult this file for basic information.

Freeway Advanced's greatest shortcoming, however, is its script language. The commands are listed alphabetically in the documentation, which is fine, but they are not accompanied by examples so that you can see what a script looks like. Customer support suggests that you look at the bulletin board script that is on the program disk. This is helpful to an experienced user but it does not offer much to the novice. The script language is *Crosstalk*-compatible, but few users will want to purchase *Crosstalk* to get a manual that explains how to use the script language.

—Patricia L. Becker

HyperAccess

Hilgraeve's \$149 *HyperAccess* (IBM PC Revision 3.25) has developed into one of the finest communications packages on the market. It features high-speed file transfer, a powerful script language, an easy-to-use interface, and an interactive tutorial.

Novice users can get off to a good start by using the informative tutorial and proceeding step by step or by jumping to the chapter of their choice. Extensive sample communications sessions demonstrate every aspect of the program—from making manual data calls to using the most complicated auto-log-on scripts.

For hard disk users, installation is as easy as typing COPY. The first time you run *HyperAccess*, it automatically executes a start-up script, written in its HyperPilot script language. The program prompts you for the necessary installation parameters, then modifies your CONFIG.SYS (harmlessly) and installs a device driver.

HyperAccess is compatible with TSRs like *SideKick* and multitasking programs like *DESQview*, *TopView*, *DoubleDOS*, and *Microsoft Windows*. It includes all the

drivers and instructions you need to run these programs along with it.

FOLLOWING PROTOCOL *HyperAccess* performed the fastest Xmodem file transfer on PC Labs performance tests—even with its proprietary data compression scheme turned off. Its proprietary protocol, HyperProtocol, is significantly faster than most common protocols because of its streaming data flow and data compression features. HyperProtocol is a must for those who transfer files through noisy phone lines.

Without exiting from *HyperAccess*, you can execute DOS commands and other programs. Therefore, you can easily examine or manipulate files in your computer or run another program without breaking a communications link. When executing memory-hungry programs, you can save *HyperAccess* to disk to free up valuable amounts of RAM.

HyperAccess's remote-operations feature permits an authorized user to control his computer through the keyboard of a remote terminal. The host defines users' individual passwords and levels of access, and users with limited access cannot over-

List Price: \$139.95

Requires: 384K RAM (640K recommended), one disk drive (hard disk recommended), DOS 2.0 or later.

In Short: Its easy-to-follow menu-driven system makes this program good for beginners. Its script language is *Crosstalk* compatible, but documentation on its use is sketchy and of little value to those wanting to learn it. Not copy protected.

CIRCLE 66 ON READER SERVICE CARD

Pressing F1 on HyperAccess's main menu invokes the program's Call screen, which displays the first eight entries in the phone list. The Hayes Smartmodem 2400 displayed in the upper right is only one of more than three dozen models chosen during the installation routine.

Shouldn't all this be in your computer instead of on it?

Remember the early allure of PCs? How they were going to make your office work easier and your life more organized? Well, Lotus® Metro™ 1.1 delivers on that promise.

Metro is a memory resident desktop manager which runs behind application programs such as 1-2-3® and Symphony®. It's a two-for-one product combining 12 valuable accessories with a powerful macro generator.

The accessories all use the familiar Lotus interface, and include an appointment book, phone book, calculator, DOS file manager, list manager, basic word processing, notepad, clipboard, watch, among other features. The macro generator helps you simplify difficult or repetitive tasks.

Introducing Lotus Metro 1.1

If available RAM is an issue, Metro now includes "The Swapper" allowing you to run its accessories using as little as 64K of RAM. Or if need be, you can unload the whole program with a single keystroke. **Two products for the price of one.**

You would have to buy both SideKick® Plus and SuperKey® to match the functionality of Metro 1.1. And Metro costs only \$85.*

All of this makes Metro sound pretty impressive—and it is. So impressive that PC Magazine selected Metro as Editor's Choice in 1987 in the categories of Desktop Organizer and Keyboard Macros Programs.

Metro 1.1 has both 5.25" and

3.5" disk versions packaged in the same box. So visit your Lotus Authorized Dealer today, or call Lotus directly at 1-800-345-1043 and ask for product ADG-1691 to order Metro.

It's never too late for your PC to make you more organized.

Lotus Metro 1.1

System Requirements: Lotus Metro runs on IBM® COMPATIBLE™ and other computers. For specific system compatibilities consult your Lotus Authorized Dealer. Metro requires two 5.25" double-sided disk drives or one 3.5" disk drive. Hard disk not required but strongly recommended. Minimum of 64K required with Swapper, 128K without. DOS 2.1 or higher. Swapper requires a hard disk, extended RAM with VDISK, or later. Also required with later RAM Disk. Metro is supported and runs with a wide variety of software programs, including 1-2-3 and Symphony. When you purchase Lotus Metro directly from Lotus, take your first 30 days to try it. If after 30 days, Lotus Metro does not perform as described and you've purchased it directly from Lotus, we'll gladly give you a \$40 refund. © 1988 Lotus Development Corp. Lotus, 1-2-3, and Symphony are registered trademarks, and Lotus Metro is a trademark of Lotus Development Corp. IBM is a registered trademark of International Business Machines Corp. COMPATIBLE is a registered trademark of COMPATIBLE Computer Corp. Toshiba is a registered trademark of Toshiba Corp. SideKick and SuperKey are registered trademarks of Sorbus International, Inc. *Suggested Retail Price

write or delete files on the host computer.

With *HyperAccess*, you can automate entire communications processes. *HyperAccess* can sign on to remote systems and handle routine file transfers or place calls for you in the middle of the night. To automate a process with *HyperPilot*, you can write a script using your favorite text editor and then have *HyperAccess* automatically compile it.

You can execute scripts with remarkable flexibility. You can run scripts directly from the DOS command line or run them from the communications screen. Finally, you can designate a script as a "sign-on" script, which the program automatically executes after a communications link has been established.

To get you started, included with *HyperAccess* are 36 useful, prewritten scripts, including log-on scripts to many popular remote systems. Other scripts place a data call at a designated time, log in to and download files from a *HyperAccess* host, and set up your system as a high-security dial-back host. What's more, *HyperAccess* can run the scripts unattended. When the program first runs an auto-log-on script, it learns your sign-on password and stores it for use in future auto-log-ons. Unfortunately, since .NIX files are unencrypted, anyone can, with the aid of a few simple DOS commands, view your passwords and thereby compromise the security of your communications.

Performance Tests: Communications Software

To time data transfers from one IBM PC AT to another, PC Labs' performance tests used two different files: a 1-byte ASCII file called *OVERHEAD* and a 50K ASCII file called *TIMING*. Each IBM PC AT had the same configuration, and the same communications programs were used on both, allowing us to measure the programs' ability to send and receive data.

The files were tested using the standard Xmodem protocol, which supports checksum for error correction. All of the tested packages can use this error-correction scheme, but some use checksum only when other communicating programs request it. For these packages—*ProComm*, *ProComm Plus*, *Freeway Advanced*, and *BitCom*—CRC error correction was used instead. Although both checksum and CRC transfer data in 128-byte blocks, CRC is inherently slower because of its additional error-checking overhead.

Besides using Xmodem (the one universal option among public-domain protocols), some programs support their own proprietary protocols, which were also tested. In general, these protocols can only be used between copies of the same communications package—or different packages from the same manufacturer. In some cases, however, the proprietary protocols are licensed for use by other manufacturers. The programs we tested with their own protocols were *HyperAccess*, *Professional-YAM*, *Crosstalk XVI* and *Mk.4*, *Freeway Advanced*, *Relay Gold* and *Relay Silver*, *Ascom IV*, *Lync*, and *Softerm*. For comparison, the results of testing with the Xmodem protocol and with the proprietary protocol are shown together for both the *TIMING* and *OVERHEAD* files.

The test results for transfer of the *TIMING* file are representative of real situations. *HyperAccess* performed file transmissions faster than any of the other programs. Both with Xmodem and with its proprietary *HyperProtocol*, *HyperAccess* came in first.

Crosstalk XVI and *Mk.4* were within the top four. *Crosstalk XVI*, with its proprietary protocol, DART, was right behind *HyperAccess*, but *Crosstalk XVI*—using its older *Crosstalk* protocol—didn't fare nearly as well.

Relay Gold and *Relay Silver* were midroad for Xmodem tests and proprietary protocol tests alike. (Their proprietary protocol is called *Relay Bidirectional*.) The

only difference between the two programs is that *Relay Gold* adds support for mainframe communications. Because the programs are identical for PC-to-PC communications, we decided to test them with *Gold* installed on one AT and *Silver* on the other.

Softerm was the slowest of the packages we tested, both with Xmodem and with a proprietary protocol (*Softtrans*). While transferring data, the program shows the data on the screen, which significantly slows its performance for file transfer.

The results for the *OVERHEAD* file show the time taken to set up for file transfer and to return control to the keyboard. With Xmodem, *SideTalk*, *Freeway Advanced*, and *Respond/Async* yielded the fastest times. When using a proprietary protocol, *Freeway Advanced* was the fastest program on this test.

Crosstalk XVI and *Mk.4* were again among the top performers when using the Xmodem protocol. As in the *TIMING* file test, *Crosstalk Mk.4* delivered good performance using DART, while *Crosstalk XVI* was considerably slower using *Crosstalk*.

In this suite of tests, *HyperAccess* was a decent performer whether using its proprietary protocol or Xmodem. It takes only a moment to set itself up for file transfer, which is insignificant considering its speed in transferring files.

The PC Labs communications program performance tests transferred two files for each protocol tested. The *OVERHEAD* file test was 1 byte long and was designed to time the program's overhead in setting up for transfer and in returning control to the keyboard after transfer was complete. The *Timing* file test was a 50,000-byte test file designed to measure real-time file-transfer speed.

For an across-the-board comparison of file-transfer times, we used the standard Xmodem protocol, with 128-byte blocks and checksum error checking, except in cases where checksum is not available unless another program requests it. In these cases, CRC was used.

For those programs with proprietary file-transfer protocols, we also tested the proprietary protocol. If there was more than one, we tested the latest protocol (based on manufacturers' claims) designed for use with modems that do not have their own built-in error-correcting feature.

Data compression, when available, was turned off for the Xmodem tests; this ensured that file-transfer time would reflect the speed of both the sending and receiving portions of each program. For proprietary protocols, however, we used data compression, since for these there was no other option.

All the file transfers were measured from the last keystroke command on the controlling side to the moment when control was returned to the keyboard. For Xmodem transfers, this meant setting up both sides individually, then entering the command to start sending on the sending side, followed by the command to start receiving on the receiving side. For proprietary protocols, this often meant setting up one side for remote operation, then controlling the transfer from the other keyboard.

If the world had one computer communications

The fact is, today's bewildering variety of computers demands a program like this.

CROSSTALK[®] Mk. 4 is the entirely new generation of PC communications software.

Its language, CASL[™], is designed specifically for the needs of communications and related applications.

- It helps your PC perform a variety of functions with a variety of different devices — direct-connection, modem, coax, or X.PC — up to 15 sessions at a time, if you like.
- It emulates virtually all popular terminals — IBM, DEC, Data General, TeleVideo, ADDS Viewpoint, and many more.
- It supports most popular modems.
- It supports the most widely used file transfer protocols, including XMODEM, YMODEM, KERMIT, CompuServe "B", CROSSTALK, and its own high-speed DART.
- It works with interfaces such as IRMA[™] and Smart Alec[™] to

standard you wouldn't need Crosstalk Mk.4

facilitate connections with mainframes and minis.

- Its language allows an unprecedented degree of automation of complex applications functions and contingencies.

It does everything you always wished your old communications program could do.

Maybe the world's computers can't be alike. But now at least they can communicate.

See your dealer for CROSSTALK Mk. 4, and let your imagination fly.

■ COMMUNICATIONS SOFTWARE

MORE SCRIPT POWER The HyperPilot script language includes string and numeric operators, branching, subroutines, pattern matching, and lots more. It can serve seasoned programmers as well as corporate users. Scripts can be written to hide *HyperAccess* behind a customized menu system and thus give inexperienced users only the choices necessary for their specific communications needs. Hilgraeve also offers site licensing for companies that have large numbers of users.

A top-notch, comprehensive, easy-to-use communications package with fast, reliable file transfer and a powerful script language, *HyperAccess* won't let you down.—Alan Roth and Gary Stein

Lync

Lync, from Norton-Lambert Corp., was one of the first programs to offer remote PC communications, as well as the ability to transfer various files between different operating systems. Today, 3 years after its fifth and latest major revision, the \$195 program remains a portable communications package capable of communicating with minis, mainframes, on-line data and e-mail services, and other PCs.

You install and configure *Lync* by running an installation procedure. Unlike most other communications programs where you have to specify the parameters,

Access any command by pressing the escape key and typing the command. To use the On-Screen Manual, press the escape (ESC) key, when you see the command prompt "Q:" type HELP, then press the return (CR) key. Example:

Q: HELP (CR)

(TERM:Q)
AT 2
OR

Q: cons
CONS -
(Internal Commands

SEND	SAVE	TERM	LYNC	HELP	DIR	CONS	LOG
TYPE	CALL	DO	RENOTE	WAIT	BELL	DEFAULT	WIDTH
DRIVE	USER	CHDIR	PASSWORD	CONFIG	END	QUE	TEST

External Commands

386	686	1200	2400	4800	9600	19200	BRAR
MODEM	DIAL	RD	HANGUP	ORIG	ANS	QUIT	AUDIO
RINGS							

(TERM:Q)
=

All *Lync* commands and script (Log) files are accessed from a command line prompt, invoked with the Esc key. The Cons command, shown here, displays a quick list of the commands available at any time.

Lync checks the incoming data and sets these parameters accordingly. The only communications parameter you have to be concerned with is the bit-per-second rate. *Lync* runs on more than 250 different types of computer systems, a claim few other communications packages can make.

When you enter *Lync*, you are placed in terminal mode, where anything you type is sent directly to the modem. *Lync* commands are entered from a command line that you access by using the Esc key. From the terminal mode, options are many: you can communicate with any on-line data service, use one of several methods of uploading/downloading data, dial numbers from a phone list, use script (LOG) files to automate these procedures, and invoke the *Lync* mode.

The *Lync* mode is used either to transfer files with another PC running *Lync* or to establish a remote link with another PC. The *Lync* program uses a proprietary error detection and correction protocol when transferring files between PCs operating in the *Lync* mode.

Remote communications can be established with a PC running any communications program as long as it's in a TTY terminal mode. Passwords can be optionally

set up to restrict access to remote machines, but neither computer can transfer files.

INSTRUCTIVE DOCUMENTATION

Lync's documentation contains an in-depth "How to" section, helpful to novices, which covers such items as how to automatically sign on to an e-mail service, how to send and save encrypted data, how to make a mini-to-mainframe connection, and how to connect two computers both running *Lync*. A Quick Reference section explains each *Lync* command in more detail, and the remainder of the manual contains information on the advanced features and special options.

Lync contains a script language that allows you to automate dial-up, log-on, and file-transfer procedures. Scripts, called LOG files, can be chained together using *Lync* batch files, which are very much like DOS batch files. Batch files can call *Lync* commands or several LOG files. Both batch and LOG files are executed from the *Lync* command line.

You write a script command much as you would a simple if-then statement: next to a prompt that is listed on the left side of a "marker" character. If the prompt is

FACT FILE

Lync, Version 5.0
Norton-Lambert Corp.

List Price: \$195
Requires: 64K RAM.

two disk drives, DOS 2.0 or later.

In Short: Entirely command-driven, *Lync* is not for beginners, but its recursive script language makes it particularly attractive. Portability among operating systems, file encryption, and remote communications capabilities make it one to consider for demanding applications. Not even protected.

CIRCLE 187 ON READER SERVICE CARD

Untouched Screen Images

Buy The One On The Left And You'll Have To Put It Where The Sun Don't Shine.

The monitor on the right, however, can be placed anywhere you like. Even in direct sunlight. It's the new *Flat Technology Monitor* from Zenith Data Systems—winner of PC Magazine's coveted "Technical Excellence Award" in the hardware category for 1987.

You Have To See Zenith To Believe It

So clear. So precise. So lifelike. It's the only monitor with a completely flat screen. A breakthrough that has redefined monitor quality forever. Industry experts are already convinced. And once you see it in person, you'll be a believer, too.

Bigger, Brighter, Glare-Free

Our Flat Technology Monitor has an impressive 14-inch display. And even though it's bigger, it's 50% brighter than conventional CRT's and it has 70% greater contrast. So you get colors with greater depth and definition that make your reports, charts and graphs come alive like never before.

The Flat Technology Monitor is virtually glare-free. So you can work longer without the usual headaches

and eyestrain. And that means greater productivity. But to get the whole picture, you have to see it with your own eyes.

Backward And Forward Compatibility

You also get full compatibility with the high resolution VGA Video generated by IBM's new PS/2® computers. And with Zenith's Z-449 or other VGA-class video cards, you can enjoy CGA, MDA, Hercules and EGA graphics as well.

Experience Zenith's Latest Technology Breakthrough

Obviously, a mere picture can't do justice to our new Flat Technology Monitor. It demands a face-to-face evaluation. For a hands-on demonstration, call today for the name of your nearest authorized Zenith Data Systems dealer—the Flat Technology Monitor is available in quantities right now.

ZENITH

**data
systems**

THE QUALITY GOES IN BEFORE THE NAME GOES ON®

■ COMMUNICATIONS SOFTWARE

matched during communications, then the *Lync* command on the right side of the marker is executed.

If a prompt is matched out of order in a LOG file, script control will jump to the appropriate prompt and execute that *Lync* command, then jump back to where it left off. This saves you time and effort because you can include all the prompts in the LOG file that you might see, and *Lync* will match only the ones that it finds.

Lync can encrypt files for greater data security on public services. Any files that can be normally transmitted using *Lync* can be encrypted. The sender must specify a code word with the transmitted file, and only this code word can be used to decrypt the file. To encrypt spreadsheet files and other 8-bit files, you include *Lync*'s ASCII convert option to convert the file to ASCII before encryption.

Lync is not for people who rely on menus. You work from an @ sign on the screen and access the command line by pressing the Esc key. Another drawback is that it doesn't have a DOS window. However, you can execute several DOS-like commands from the command line.

Lync is available for many different types of machines and operating systems and does much of the work for you. In fact, a large number of users among the installed base use *Lync* specifically for conversions among various operating systems.—Greg Alwang

***** MEX-PC

MEX-PC, \$99.95 from NightOwl Software, seems tailor-made for individuals. Although it gives token help to novices with a simple menu system, *MEX-PC*'s real strength is its flexible, full-featured command language. It's a boon to anyone who prefers to program their communications packages to suit their needs.

The program's menu mode is a way for first-time users to familiarize themselves with the product. A series of point-and-shoot nested commands takes up the top fourth of the screen and opens the program. As you highlight each, an explanatory note appears below it. A tag tells you which menu you're in.

At the menu-mode level, the program

Once you've passed from menu to command mode, *MEX-PC* becomes a much more usable system. Here, a phone number has been assigned to the phrase MCI, which was then used to call the service.

allows you only to create phone number files for automatic dialing; you can save only the number and a short explanatory note. You cannot include specific parameters for the service or any log-on procedures. Once you're connected with a service, *MEX-PC* doesn't automatically switch into terminal mode. Instead, you have to toggle back to the menu and call up a separate Conversational menu, which you use to get—finally—into Terminal mode. The procedure is awkward at best.

CLONING ITSELF *MEX-PC* has no install routine. Instead, you save whatever changes you make during a particular session and copy the program. This procedure enables you to start *MEX-PC* immediately in command mode by simply cloning it while you are in that mode.

The command mode is where *MEX-PC* shows its muscle. You activate the command files by using a Do command from the command line. Within a command file, you can perform most of the functions expected of a reasonably sophisticated communications program, including untended timed operations. You can also eas-

ily create personalized menu screens, log the date and the time as the first line of a captured file, call on subroutines, and even run other command files from within your program. The program also works well as a remote terminal.

FACT FILE

MEX-PC, Version 1.65
NightOwl Software Inc.
Route 1, Box 7, Hwy. 12
Fort Atkinson, WI 53538
(800) NITEOWL
(414) 563-4013
List Price: \$99.95
Requires: 192K RAM.

DOS 2.1 or later.

In Short: Although its menu mode is limited, this reasonably priced program shines in its much more wide-ranging and useful command mode, which includes a relatively sophisticated language. Beginners may find the learning curve too steep, but programmers will find the package worth serious consideration. Not copy protected.

CIRCLE 676 ON READER SERVICE CARD

Quick-turn the page.

STUDY TIME MEX-PC's language is useful once you've learned it, but the manual proceeds at too leisurely a pace. It eventually explains all the commands, but a better-written tutorial would help. Night-Owl Software does include several well-labeled command scripts. Unfortunately, on the whole they're too complex to be of real help to beginners. A more basic sample sign-on script would be useful.

MEX-PC has a lot to offer do-it-yourself programmers, but its menu-driven mode is weak—and its name doesn't tell the story. Hold the salsa—MEX stands for Modern Executive.—**Barbara Krasnoff**

Mirror II

When *Mirror*, from SoftKlone Distributing Corp., was first released, it was an unabashed clone of *Crosstalk XVI*—even down to the *Crosstalk* status screen. Microstuff (then the manufacturer of *Crosstalk*) cried foul and won a ruling stating that the screens were protected by copyright. SoftKlone responded by redesigning the screens. The result is *Mirror II*, a program that looks different from *Crosstalk XVI* but includes all the *Crosstalk* commands, adds significant new features and sells for just \$69.95.

If *Mirror II* did no more than copy *Crosstalk XVI*, there would be little to say about it. What makes the program interest-

1. Port Settings		1. Connection Parameters	
Port	1	Loaded	COLOR.XTX
Speed	2400	Name	MIRROR settings for the Hayes 2400
Data	8	Number	
Parity	None	Mode	Call
Stop bits	1	Duplex	Full
Handshaking	Off	Retials	10
Flow control	~B/~Q	Capture	Off (50K Remaining)
		Emulate	None

Command File Directory				
1) COLOR	2) HELP	3) MCMAIL	4) NEWUSER	5) PCIRS
6) SETUP	7) STD	8) VID_MONO		

Go to dial	CTRL-End to scroll left box	Help for command list
Bye to hang up	CTRL-PgDn to scroll right box	Quit to exit MIRROR
Command?		

On first glance, the *Mirror II* status screen bears little resemblance to the *Crosstalk XVI* screen—except for the Command? prompt at the bottom line. The parameter settings are divided into two sections, or "boxes," on the upper half of the screen.

ing are the differences. Consider the script language, for example. The *Mirror II* language includes all of the *Crosstalk* commands, so the program can run any script written for *Crosstalk*. It also includes enhancements. Most notably, *Mirror* adds a learn mode for automatically creating scripts. Once it is created, you can edit the script with a word processor or with *Mirror*'s own editor.

REDESIGNED SCREENS Ironically, *Mirror II*'s redesigned screens also offer an advantage over *Crosstalk*. The *Crosstalk* status screen has so much information that it can be overwhelming. Until you learn to ignore most of the screen, the information you really need can get lost in the crowd.

Mirror II eases the information overload. The program divides its settings into categories—including port settings, security features, connection parameters, and system settings. With three to nine settings in each category and a maximum of only two categories showing at once, the display screen is far easier to read. A simple Ctrl-key combination lets you scan

through the different categories as needed.

The *Mirror II* help feature is another plus. With *Crosstalk XVI*, you can ask for information on any command, but that helps only if you already know which command you want information on. *Mirror II* adds help in finding the right command when you don't know which one you need. You can, for example, pick Binary File Transfer from the help menu, and *Mirror* will show you a list of file transfer commands along with short explanations of each. In most circumstances, this is a more useful approach.

A DRAMATIC ADDITION The most dramatic additional feature in *Mirror* is background operation. As with *Crosstalk*, you can run *Mirror II* in the foreground and clear it from memory by leaving it with the Quit command. However, you can also leave *Mirror* by way of a hotkey. This lets you load another program while *Mirror II* keeps operating in the background—redialing a busy bulletin board, automatically answering incoming calls, continuing a file transfer, or simply waiting for you to call it up again.

List Price: \$69.95

Requires: 192K RAM, DOS 2.0 or later.

In Short: This clone of *Crosstalk XVI* offers a more readable status screen than *Crosstalk*'s, a better help system, background operation, additional file-transfer protocols, and additional terminal emulations—all at a substantially lower price. No copy protected.

CIRCLE 675 ON READER SERVICE CARD

That's how much effort it takes to turn data into graphs with Graphwriter II.

Actually, it may take even less effort than that. You see, Lotus® Graphwriter® II is the only graphics software that lets you automatically generate large quantities of quality graphs based on current spreadsheet and database information. All with a single command.

Do you regularly need to create a variety of graphs from continually changing data such as daily inventory, monthly P&L or quarterly head count? With Graphwriter II you can create a direct link to data in your 1-2-3®, Symphony®, dBase® or ASCII files. So whenever you update your data, you can automatically update your graphs with a single command. What's more, with one keystroke you can toggle back and forth between your data source and Graphwriter II to view and select the data to be graphed. No more printing out files and time-consuming rekeying.

Graphwriter II is a full-fledged production system. You can automatically output up to one hundred charts at a time with a single command. You can even print multiple charts on a page.

And Graphwriter II offers you 24 different graph types—more than any other PC graphics package. So you can choose the chart type that best represents your data.

What's more, you have control over hundreds of style settings such as type font, heading location, bar width and color.

So if you need to create and frequently update graphs from ever-changing data, you need Lotus Graphwriter II.

To get a free self-running Graphwriter II demonstration kit, call 1-800-345-1043 and ask for demo kit AFB-2524, for 5.25" format, or demo kit AFB-2664 for 3.5" format.*

Then you can turn *this* page too.

Lotus Graphwriter II

Lotus Graphwriter II

■ COMMUNICATIONS SOFTWARE

The background operation is not entirely stable. In testing for this review, the program crashed twice—both times while hot-keying out of *Mirror*. Even so, background operation is a seductive feature. Just be sure to approach it skeptically and save your work more often than usual.

Also worth noting is that *Mirror* offers 11 terminal emulations compared with *Crosstalk*'s 6. And to *Crosstalk*'s Xmodem, Kermit, and proprietary protocols, *Mirror II* adds Xmodem-CRC with fallback, Modem7 batch, Ymodem batch, Ymodem-G, and the Hayes Smartcom II protocol.

By any measure, *Mirror II* is a good value. If you're not interested in script files or background operation, there are easier programs to learn and use. But if you're serious about communications—and particularly if you're a *Crosstalk* user who has already invested time and effort in developing scripts—*Mirror II* is worth a close look. If you like *Crosstalk*, you should love *Mirror*. If you don't like *Crosstalk*, you may very well like *Mirror* anyway.

—M. David Stone

ProComm Plus

.....
Datastorm Technologies' *ProComm* and its new *ProComm Plus*—the first a popular \$50 shareware program, and the second a \$75 commercial product—are like elegantly engineered German touring cars at the price of Korean subcompacts: they'll deliver on performance, but they won't break the bank.

ProComm has been available through shareware channels for several years and stands up against the toughest competition from the commercial communications software products. *ProComm Plus* is an enhanced version of *ProComm*. It is not meant to replace the shareware version but to sell alongside it as a slightly more expensive, more feature-laden sibling.

A LOT ALIKE The two versions of *ProComm* have much in common. Either program lets you set your preferred values for most defaults. Both provide limited DOS services through file view, change directory,

While *ProComm Plus* talks to a *ProComm Plus* host, several protocol choices for file transfer appear in both the program's host menu and the exploding upload window. Note the Read Mail and Leave Mail choices; the mail feature turns *ProComm Plus* into a BBS.

ry, and directory list commands. Both versions also include a DOS shell gateway feature to let you access DOS without breaking communications. In both cases, the screens are notable for being uncluttered. And *ProComm Plus* maintains the famous *ProComm* "exploding windows," which make a chirping noise as they expand. (The feature can be turned off in both versions.)

Most differences between the versions are straightforward additions. For example, *ProComm Plus* includes its own text editor—a feature missing from *ProComm*. However, as with the shareware version, *ProComm Plus* lets you install your favorite text editor as the program's default.

The few changes in *ProComm Plus*—as opposed to additions—have all been made for a good reason. For example, the help window in *ProComm Plus* has been rearranged to make commands easier to find. Similarly, the key for calling up the help screen has been changed from Alt-F10 to Alt-Z, in recognition that IBM's new keyboard layout makes the Alt-F10 combination somewhat clumsy.

The dialing directory in *ProComm*

holds 100 entries. The *ProComm Plus* directory holds 200 entries and allows multiple directories. Each entry includes a 24-character description, telephone number, communications parameters, and, optionally, the name of the script to automatically run when connection is established. The automatic redialing feature in *ProComm* has been enhanced in *ProComm Plus* to let you dial several busy numbers in a circular queue. You can direct an activity log of a communications session to a file or to your printer in either version.

UNATTENDED REMOTE FILE TRANSFER

The Host mode in both versions offers a simple approach to unattended remote file transfer, complete with password protection. *ProComm* supplies one password for all users, plus a second password for access to DOS level. *ProComm Plus* lets you set up a user file, including password, user name, and privilege level (limited or complete access) for each user. Individual passwords combined with the usage log let you keep track of who is using your system. A built-in message facility turns the *ProComm Plus* Host

SOFTWARE SPECTACULAR!

A Sensational Selection of Popular Software

Quattro™ by Borland International

Quattro's advanced technology offers increased power and speed in the hottest spreadsheet on the market. Save time

using spreadsheet shortcuts to alter row/column length, paging, or create quality graphs. The intelligent Recalc function saves you even more time by recalculating only those elements that have changed. The SQZ! feature saves memory by automatically compacting/expanding your spreadsheets up to 95%. Best of all, there are no tough commands to learn — Quattro uses easy-to-learn 1-2-3® macros! It supports expanded memory specifications and EGA, CGA, and VGA adapters to get the most out of your hardware.

Limited-time special... **\$109**

WordPerfect® by WordPerfect Corporation

WordPerfect, the number one word processing choice, offers you a powerful word processor with all the conveniences, including automatic

format, split-screen edit, five-field sort, mail merge, macro capabilities, 100,000-word dictionary, thesaurus, spelling checker, and online tutorial. It easily converts your files from WordStar, MultiMate, and other popular software packages for maximum compatibility. This winner of PC Magazine Editor's Choice (February 29, 1988) for word processors is sure to be a welcome addition to your writing environment.

Limited-time special... **\$189**

Flight Simulator by Microsoft

Flight Simulator's challenging realism and graphics make it the aerial simulation standard! Perfect your landings at Chicago's Meigs Field, then fly cross-country to Los Angeles, New York, or other cities using radio navigation aids and visual landmarks. (Scenery disks for several U.S. regions are also available.) When you're ready, try instrument landing approaches in bad weather, or pit your skills against enemy fighters using the World War I Ace option.

■ COMMUNICATIONS SOFTWARE

mode into a simple BBS system as well.

One of *ProComm*'s strong points is its wide range of eight file-transfer protocols. The *ProComm* menu choices include Xmodem (actually Xmodem-CRC with fallback), Modem7, Ymodem (actually Xmodem 1K), Ymodem batch, Telink, WXmodem, Kermit (with sliding windows and data compression), and CompuServe-B. *ProComm Plus* adds such protocols as Sealink, Imodem, Ymodem-G (actually a streaming Xmodem 1K), and YmodemG batch, as well as CompuServe Quick-B.

Terminal emulation is another plus. *ProComm* offers emulations for an impressive list of popular terminals: the well-known DEC VT-52 and VT-100, and IBM 3101 terminals, as well as selected models from TeleVideo, ADM, Heath, ADDS,

and Wyse. It also provides ANSI emulation for a total of ten emulations. *ProComm Plus* adds five additional models in the same product families.

ENHANCED SCRIPT LANGUAGE

With either version of *ProComm*, you can attach scripts to a dialing directory entry. You can also call a script from within another script or invoke a script when starting the program. Script control commands in *ProComm* include simple decision (IF), case statement, execution of an internal subroutine, and jump (GOTO). The *ProComm Plus* script language, called Aspect, is a greatly enhanced version of the *ProComm* language. New features include looping commands, display control commands, additional string-handling commands, and mathematical functions. Most important for ease of use, *ProComm Plus* has a learn mode for automatically creating scripts.

ProComm comes on one disk, in a compressed format called ARC, for archive. To install it, you run the supplied archive-extracting program and copy it to your working disk or directory. You can then start the program and set the defaults. The *ProComm* manual is included on-disk. A printed version is optional. *ProComm Plus* comes on two disks. The files are in a noncompressed format and are accompanied by a slick installation program. The install program includes a configuration routine that will help you set your initial defaults. *ProComm Plus* also comes with a printed manual as standard.

A GOOD VALUE *ProComm* is an excellent communications tool that can satisfy the needs of most users. *ProComm Plus*, for a modest additional price, offers extra features as icing on an already attractive cake. Both versions of the program are easy to use and packed with features. Although performance in file transfer is slower than with many other programs, this should be an issue only if you do a great deal of file transfer at long-distance rates. For most purposes, *ProComm*'s performance is adequate. If your communications needs are casual to moderate, either version of *ProComm* is a good choice.

—Kenneth H. Werner and M. David Stone

***** Professional-YAM

At first glance, *Professional-YAM* can be intimidating. It looks like the ideal communications program for people who feel that DEBUG is as friendly a word processor as they will ever need.

Omen Technology makes the program available through an interesting procedure in which you simply call up CompuServe or GENie, or Telegodzilla, the Omen BBS—and download a squeezed version of the program. Once you register the program, you receive a serial number and a distribution disk with files to unsqueeze the program files and bring *Professional-YAM* to life. You cannot get a working copy without a valid serial number, but, after you get one, you can copy the program at will, and your serial number entitles you to free program updates.

The features in this \$139 package could fill a small book. *Pro-YAM* has an incredible command language. The reference card lists more than 400 commands, parameters, and other settings that you can access from the command line. You can also incorporate these into scripts that can automate everything from unattended file transfers to reminders to call home to say you will be late for dinner.

File-handling commands let you look at the contents of files, cut out sections, and append them to other files. You can

CIRCLE #74 ON READER SERVICE CARD

ProComm Plus, Version 1.0
List Price: \$75
Requires: 192K RAM, DOS 2.0 or later.
In Short: This popular shareware program is easy to learn and use yet offers a full range of features, including a choice of eight file transfer protocols, ten terminal emulations, a password-protected host mode for remote file transfer, and a full-function script language—all at a low price. *ProComm Plus*, best thought of as an enhanced version of *ProComm*, includes all the features of the popular shareware program plus such improvements as a companion text editor, more-readable screens, individual passwords for the program's host mode, and additional file-transfer protocols. If you like *ProComm*, the extra \$25 for *ProComm Plus* is well worth it. Not copy protected.

Professional-YAM comes with a demonstration script that includes this menu of options—an example of how the Pro-YAM interface can be simplified for users through careful script programming.

browse through directories half a dozen different ways. You can even drop into DOS and issue a command directly.

If you don't feel up to writing complex scripts, the default script automates many procedures for you, such as setting function-key and Alt-key combinations. You can toggle into terminal mode and back to command mode. You can manually dial a number with one command. You can even ask the program to prompt you through the dial-up process, and it will construct a script by recording a communications session and capturing both the host prompts and your responses.

WHAT MORE? *Professional-YAM* offers multiple types of security and encryption, host mode for remote access, automatic logging of incoming and outgoing transactions, nine or more different transfer protocols, and the ability to work with nearly any modem. One protocol is Zmodem, touted to be one of the fastest and most reliable available. What more could anyone want?

Well, some people would like a program that is easier to use. You can create a

script that presents menus and such on the screen, but you have to write it. Not everyone needs seven different *DIR*ectory commands. And many people may be put off by the effort required to get up to speed with this program.

One problem is the manual. It is written in a dense style, with endless lists of parameters and commands and few examples to make usage clear. The two "tutorials" require careful examination of the hypothetical scripts and communications sessions listed in the book with brief annotations. These tutorials don't even appear until Chapters 8 and 25 (out of 35).

Everything in the product is configurable; nothing is static. *Pro-YAM* is also available under Unix, and its influence seems to permeate the program. For example, DOS paths must be specified with the forward slash, /, because the backslash, \, is used by Unix as a command trigger.

Noivics may find all this confusing. Indeed, the program displays a bias towards programmers. You can specify an ASCII character to be sent using the Put command, but there are only two number bases that can be used. One is hexadecimal (base

*The Intel 80386
microprocessor*

Introducing the corporate 386.

Copyright © 1988 Sun Microsystems, Inc. Sun386 and The Network  The Computer are trademarks of Sun Microsystems, Inc. Sun and the Sun logo are registered trademarks of Sun Microsystems, Inc. UNIX is a registered trademark of AT&T. Intel is a registered trademark of Intel Corporation.

The 386-based personal computers offer the individual raw power.

But, in most corporations, the real work is done by many people, all trying to work together. Computers should aid this process, by giving individuals the personal power they need, and by helping groups of people work together productively.

Different groups need to share and work with the same information, even though they may be using different computers, or their data is kept on remote mainframes.

Personal 386s fall short of meeting these needs. Because they use under-powered and primitive operating systems.

So they can't handle the really demanding applications. And they only talk to themselves, with some difficulty, rather than to all of your computers.

That's why we're introducing the corporate 386. The Sun386i™ workstation. It has the same high-performance Intel® 80386 chip as the PCs.

But not their personal limitations.

Because it runs Sun's open, distributed computing environment, built around the UNIX® operating system.

So, you have transparent access to every computer in your company. No matter which vendor's name is on the box.

Unlike the PCs, the Sun386i lets you take full advantage of the thousands of powerful applications designed around the UNIX operating system. But it also lets you run all of the PC

DOS applications that millions of users have developed so much expertise in.

And with its 5-MIPS power, UNIX and DOS applications can run simultaneously and at full speed.

But with all this power and

In real-world corporate applications, PC users need access to a large variety of computing resources. So the Sun386i runs Sun's open distributed computing environment, built around the UNIX® operating system. Which lets it become part of a powerful open network that can include every computer in your company.

sophistication, isn't a Sun386i harder to use than a PC?

Not at all. In fact, it's easier.

Because we've given it a friendly, icon-oriented user interface with an integrated help facility. And a file organizer, to easily find, open, and keep track of files all over the network.

There's even an automated network administrator, that lets you personally install the Sun386i in minutes. Instead of hours.

So look to Sun for total network-ing solutions that help pull a company together.

If you'd like to know more, call 1-800-223-6736. In CA 1-800-322-6736. And we'll show you the difference between a personal machine.

And the right corporate choice.

The Network *Is* The Computer™

16), which is reasonable enough, but the other is not base 10 (the decimal system, based on a total complement of fingers) as you might expect. It is octal (base 8, as in "forget you have thumbs"). Perfect for those of us who waste all that time translating the actual binary codes for ASCII characters into those troublesome decimal values, but a little hard on the uninitiated.

If you want to take charge of your communications applications or may be having problems with your current system, *Professional-YAM* may be worth a look. On the other hand, if you don't want to invest a lot of time getting on-line, *Professional-YAM* is not for you. —**Alfred Poor**

**** Ptel

Phoenix Technologies' *Ptel*, priced at only \$49, can transfer text and binary files and communicate with on-line data services as well as micros, minicomputers, and mainframes. It has a full-featured telephone directory and a powerful script language. And its key combinations let you bypass the command menu for fast, easy access to all commands.

To install *Ptel*, you copy the files from the distribution disk onto the hard disk and run the PTELUP installation program. PTELUP prompts you for most of the communications parameters. The settings

The *Ptel* telephone directory allows you to enter many communications parameters and other useful information for each directory entry. A script command in the Esc 0 command slot will be automatically executed when a connection is made.

act as defaults, but you can change most, except for the modem type, from within the program.

From the command line, you can invoke a command menu that doubles as a help screen, listing each command and the key associated with it. You can also issue commands from the terminal mode, using a "quick-key" combination to bypass the command menu.

Each telephone-directory entry includes ten slots for entering additional data or keystrokes that you need to send to the remote system. *Ptel* treats each Esc slot as a short script file, but the last slot is reserved for an auto-log-on script. The program automatically invokes this command as soon as communications are established. Commands can be used to call other script files.

DEFAULT PROTOCOL PLUSES *Ptel* can use Xmodem, Xmodem-CRC with fallback, Modem7 Batch, Kermit, or Telink protocols. The program uses Telink with CRC error correction as the default. Telink checks the serial numbers of *Ptel* copies. If the same copy of *Ptel* has been installed on two different computers, Telink will recognize the duplication and pro-

hibit file transfers between them.

When *Ptel* encounters an error during a file transfer, it tries to resend the information up to ten times. If the final attempt to transfer is unsuccessful, *Ptel* prompts you to tell it whether or not to continue. It will then continue or abort the transmission accordingly.

You can specify unattended operation by using a script command. In this case, *Ptel* will set an error flag wherever needed so that script commands can detect the error. Another useful feature for unattended operation is automatic redial until a connection is made.

SPEAKING THE LANGUAGE *Ptel*'s line-oriented, interpretive script language is a lot like BASIC and is easy to use. You are given several sample script files that illustrate its many uses. The language allows subroutine calls to other script files (up to ten levels deep) and offers loops by means of labels and GOTO commands.

Several different types of variables make designing scripts easy. An intelligent error-trapping variable automatically sets an error flag and then branches to a previously specified label. A special Z command allows you to have the system

(617) 769-7020
List Price: \$49

Requires: 150K RAM, DOS 2.0 or later.
In Short: This low-priced yet full-featured program supports popular file transfer protocols. It's easy to learn and use and it lets you execute all commands by using keystroke combinations as well as from the menu. The script language, which allows subroutine calls and conditional branching, is more than adequate for automating everyday communications procedures. Not copy protected.

Good News For People Who've Always Wanted A TARGA 16...

Now less gets you even more!

**The NEW Improved
TARGA 16 is only
\$1995!**

When we redesigned the industry-standard for high color resolution videographics, we incorporated the latest technological advances. The result is a TARGA 16 with improved video quality, built-in overscan, simultaneous RGB and composite video output and more.

And TIPS is only \$795!

Since we lowered the price on our popular TARGA 16, we decided to reduce the cost of its companion, TIPS Imaging Software. The TARGA 16 version is now only \$795, a savings of \$455. This latest release of the award-winning IBM PC-based paint program lets you create new graphics or enhance images captured by the TARGA 16. So contact your nearest Authorized Truevision Reseller, or call 800/858-TRUE and see how less can become even more.

■ COMMUNICATIONS SOFTWARE

wait until a specified time of day to continue processing, which is ideal for unattended operation. However, *Ptel* offers only remote file-transfer features rather than full-fledged remote operations.

Ptel's documentation is clear and concise. The tutorial section dives right into the script language. It begins by walking you through a prewritten script designed for logging on to an on-line service.

An inexpensive communications program with a full-featured script language, *Ptel* is a no-frills, no-headache program.—Greg Alwang

Qmodem

Qmodem, a popular shareware communications program, was long a favorite of the BBS crowd. Recently eclipsed by *ProComm* and *Boyan*, *Qmodem* came roaring back with a new version, renamed *Qmodem SST*, Version 3.1, and packed with exciting features.

Qmodem author John Friel maintains a bulletin board from which you can receive the program and participate in conferences with persons producing beta protocols. You can purchase *Qmodem* through the bulletin board as well, making payments on-line with your credit card. The price of the program is \$50.

Hooks in *Qmodem* permit it to call outside programs that implement new error-correcting protocols besides those built into the program. In the current version of

[Qmodem SST Version 3.1a Production Compiled October 31, 1987]

Press any key combination, [F1] for Help, or [ENTER] to return

Qmodem's main help screen shows the rich set of functions available at a keystroke. Note that your choice of external editors may be installed to replace the program's *Edlin* default.

Qmodem, external protocols include Kermit and windowed Xmodem (sliding windows), as well as protocols designed to work with the newer modems that perform their own error correction.

QINSTALL, the install routine in *Qmodem*, allows access to virtually every feature and parameter setting you might wish to change in the program, including colors and window location, as well as the usual communications and hardware parameters.

You can change settings while *Qmodem* is running. Better yet, QINSTALL has fully context-sensitive help. When you set a parameter, you can press F1 to receive a lucid explanation of its importance and meaning. *Qmodem*'s manual is outstanding and includes a comprehensive index and a handy reference guide to the script language.

Qmodem's powerful script language includes a number of exciting capabilities, such as built-in commands that let you create menus in your scripts. You can handle input information in many ways. One is with the Get command, which simply accepts the keyed information into a vari-

able. You can also read information from the data feed to which you're connected. The program permits looping and branching based on an indexed variable. A Push and Pop stack facility and subroutine handler permits flexible script design. *Qmodem* gives you the ability to call one script from within another, and a DEBUG facility lets you test a script as you create it. Editing is done through a file view facility that can be simply tailored to your use.

You can execute a script three ways: by linking a script to a number in the dialing directory and then entering the number, by invoking Alt-F, or by attaching it to a macro key. Keyboard macros provide a handy tool with which you may assign up to 40 key combinations (various shifted and unshifted states of the function keys).

Four terminal emulation modes are supported, and there is an option to exit but leave DTR set so that you don't drop your line if you have to leave the program.

SCROLLING SCRIPTS *Qmodem*'s DOS shell is robust and doesn't need much memory for basic operation. You can run quite a few products within the shell if you

How much would you pay for a device that does all this:

- Print Master II lets all your computers easily share all your printers, plotters, and modems, reducing the cost per user of expensive peripherals.

- Print Master II spools print jobs in its smart 256K buffer (field expandable up to 768K), then outputs them in sequence to keep your computers and printers working.

- Print Master II allows computers to select each other so you can share data bases and transfer files.

- Print Master II makes choosing a connection as easy as moving your cursor. You select where you want your data to go from a pop-up menu generated by BayTech's memory resident program.

- Print Master II, Model 808E, features eight flexible ports: six serial and two parallel. You can set any port, including both parallel ports, as a computer port or a printer port.

- Print Master II's serial ports operate at real speeds up to 9600 baud, even when all

ports are operating at the same time. You can set baud rates, plus other configuration changes, for each port.

- Print Master II handles protocol conversion automatically (i.e. serial/parallel, baud rates, handshaking, etc.), so it's compatible with virtually all makes of computers, printers, plotters, modems and peripherals.

- Print Master II can be used in conjunction with the printer server of a LAN to help off-load network traffic by providing port expansion and extra buffer.

- Print Master II features many little extras that make a big difference in performance: shielded connectors, a built-in power supply, easy-to-read configuration menus, fewer parts for higher reliability, sturdy metal case.

How about \$595? Call us to order direct or for the name of your nearest dealer.

■ COMMUNICATIONS SOFTWARE

haven't used the extensive buffer expansion capabilities. However, when you need scrollback capability to go back within a session, or if you want to expand the download buffer to reduce dependence on disk writes, you may easily do so within QINSTALL. In fact, paging through the scrollback buffer is a nice way to develop scripts: log the session, scroll back, use the screen capture facility, and edit the file created by the capture. It's sort of a poor man's learn mode.

Qmodem does not include a timed execution facility but does have an excellent circular dialing facility that can allow unattended operation. The time between redials may be specified, and you can log activity for inspection the next day.

Qmodem comes with a series of easy-to-edit scripts for services like CompuServe and MCI Mail, as well as BBS software. Background operation can be done with only OS/2 or programs like DESQview that have their own facilities for background processing.

You also will not find an embedded host mode, although there is a series of interrelated scripts that will permit host operation. The program doesn't do an automatic dialback, but programming it to do so would not be that difficult. Considering how attractive the rest of the program is, it would be a shame if the need for an automatic host mode was all that stood between you and Qmodem.—Merv Adrian

Relay Gold Relay Silver

Relay Gold and Relay Silver, Editor's Choices in previous *PC Magazine* communications software reviews, go far beyond the conventional terminal emulation and file transfer capabilities of most commercial products.

Produced by VM Personal Computing, *Relay Gold and Silver* possess the same core. However, besides handling an array of PC-to-PC communications functions, *Relay Gold* can work together with proprietary mainframe software to allow file transfer between PCs and large mainframes. *Gold* allows 3270 terminal emulation in software or through its support of

In *Relay Silver*, as well as in *Gold*, details specific to every entry in the directory are stored on a separate options page. Explanatory screens for each parameter are available at the push of a button, and a log-on script to automate a given communications session may be indicated.

PC emulation boards, while *Silver* is aimed at users who do not need the specialized mainframe abilities of *Relay Gold*. The two programs are identical in every other respect, and all the features described here pertain to both. *Gold* lists for \$250, while *Silver* costs \$150.

Both possess multitasking features that allow file transfer, text editing, and printing activities to be conducted simultaneously. The rich scripting language common to both programs allows automated control of all aspects of communications.

Don't think, however, that these advanced features mean complex tasks and bumpy learning curves for the user. Both programs present a clear, consistent menu-driven user interface that beginners can use with a minimum of training. Context-sensitive help is a keystroke away, and the products are preconfigured to handle most popular modems and on-line services.

The tutorial simulates almost every phase of *Relay* operation and is an excellent introduction to its use. Another program makes installation and configuration of *Relay* practically painless. A surprisingly complete Getting Started booklet takes

the new user through the necessary steps.

Computers with which *Relay* may communicate are listed in a directory that contains phone numbers, terminal types, bit-per-second rates, and comments. For each entry in the directory, one may also specify a full range of protocol and handshaking particulars, details on remapping the keyboard, and a script that will automatically handle all log-on procedures.

Relay comes with a directory of computers that is preloaded with many common configurations. Sample entries are supplied for commercial services such as CompuServe and Dow Jones News/Retrieval, for common bulletin board systems like RBBS and FIDO, and for generic TTY and mainframe links. *Relay* has its own proprietary protocol for use between any two PCs running versions of *Relay*. This allows groups of files to be specified for transfer using the DOS wildcard characters, and the machines can both send and receive files simultaneously. Furthermore, users at each PC can chat from the keyboard during file transfer.

The log-on script for each entry in the directory may be created using the com-

To some
people, the
difference
is obvious.

“For sheer power, ease of use, speed, and flexibility, you would be hard-pressed to find a more capable product, especially if you need advanced features. It works just as well with a half-dozen spreadsheets simultaneously as it does with one.”

—InfoWorld

“Integrated systems have come a long way, and Smart has... the widest array of powerful features... strong points include intelligent data sharing and good file security, intuitive ease of use, a powerful programming language, and consistently good performance... Smart can fill the bill for a total, integrated software system.”

—PC Magazine

Whether you're just getting started as a lone computer user, or you're the Manager of Information Systems supporting thousands of PC users, discover easy-to-use applications your office won't outgrow. ■ COMMUNICATIONS

mands described in the *Relay* reference guide, but a much faster way is to use the learn facility that comes with the program. A typical log-on session is recorded by *Relay* and saved as a script to be used on all subsequent calls to the same computer.

SOPHISTICATED EDITOR *Relay* makes it very easy to alter or fine-tune a log-on script. A sophisticated full-screen text editor may be used to edit scripts or any other DOS ASCII file. The editor can perform conventional block operations and has wildcard search-and-replace capabilities. Several files may be opened simultaneously for editing, and the editor may be used while *Relay* is on-line and transferring files to another computer.

The commands used in a typical log-on script are only a subset of those available to the user. *Relay*'s script language offers an extensive set of tools for handling the real-time factors inherent in data communications. As with many high-level languages, the basic programming elements consist of variables, functions, and commands.

System variables available to the pro-

I KNOW THAT REPORT IS IN HERE SOMEWHERE.

And GOf'er is just the one to track it down. On a standard PC/AT, GOf'er digs through files at a speed of over 1 Megabyte per minute. Most GOf'er users find the information they need in less than 30 seconds.

A phrase, a fact, a note, a date. If you need it, GOf'er finds it.

Even among countless PC files, GOf'er software searches out the information you need with just one or two words, even if the correct spelling slips your mind.

"The most exciting and essential addition since Sidekick. A must for anyone who writes anything," says Tim Bajarin, columnist and commentator.

Unlike other text-retrieval software, you won't spend hours indexing or converting files before you can start searching. Four simple keystrokes and GOf'er searches floppy and hard disks to uncover the text you need.

Once GOf'er finds a section of text, you can print it, create a new file, or copy and paste

into the document you're currently working in. So if you need a certain document

written to Bill Smith that mentions "insurance" and "third quarter profits," just summon GOf'er with one keystroke and give him the word. Within seconds, that document will be at your fingertips.

- Not copy protected
- Performs complex searches using AND/OR/NOT and NEARBY
- Optional file compression feature allows you to fit more information on a hard disk. GOf'er will search both compressed and non-compressed files.
- Works with other RAM resident programs
- Finds text in almost any PC file including Lotus, WordPerfect, WordStar, DisplayWrite, Microsoft Word, MultiMate, Ventura, PageMaker and dBase

GOf'er is available at quality software retailers.

**Relay Silver,
Version 1.0**
List Price: \$150
Requires: 192K RAM,
two disk drives, DOS 2.0
or later.

In Short: Identical except for *Relay Gold*'s micro-to-mainframe links, these programs combine conventional terminal emulation and file transfer abilities with multitasking and text-editing features. Sophisticated but friendly to novices. No copy protected.

CIRCLE 663 ON READER SERVICE CARD

Enable 2.0 can do more for your business than the other five combined.

**"Enable may legitimately claim
to be the only package
you'll ever need!"**

Computer Buyer's Guide & Handbook

Five major business tools, Word Processing, Spreadsheet, Graphics, Database Management and Telecommunications: all in one full-featured, easy to learn, cost-effective package. With the ability to share data across applications that no group of stand-alones can match. And now, with newly-enhanced version 2.0, PC Week has named Enable "best integrated software package on the market."

Its remarkable ability to handle a virtually unlimited range of tasks has already made Enable one of the leading software suppliers to the Federal Government and Corporations large and small.

Consider Enable's \$695 versus their
nearly \$2500. How does that compute?

**"If you are looking for
one program to do it all,
this is the one!"**

PC Magazine

If you're stepping up to a Local Area Network, new Enable/LAN just came out on top in a comparison with other integrated LANs in an *InfoWorld* report: "easier to learn and use... the best integration... (Enable) simply feels right."

Enable 2.0 and Enable/LAN. Everything you need to unify, simplify and strengthen the operation of your business. For now, and for the growth to come.

For more information, plus the name of your nearest Enable dealer, just dial 1-800-634-3470. New York: 1-800-551-1004. Canada: 613-727-5040. Please ask for Department M.

■ COMMUNICATIONS SOFTWARE

grammer include things like current date and time, line quality, and DOS file identifiers for files being manipulated by *Relay* at any given moment. Functions perform simple calculations, handle string manipulation, and supply certain kinds of hardware information. A variety of date and time conversion functions are also included in the program.

Script-language commands initiate various *Relay* activities and handle branching based on certain conditions. Commands can display messages on the user's screen and can pause for keyboard response. They are used for dialing and answering calls, as well as exchanging messages and files with other computers.

Status information on the success or failure of a command is reported, and a script may respond appropriately, using the familiar if-then-else construct. Commands such as On Error and On Disconnect, which tell the program what to do if it detects an error or a disconnect message, are set to poll for specific conditions at all times. Any script can transfer control to another, and GOTO and GOSUB commands may be used to branch within a script.

DOS programs or commands may be run from within a *Relay* script. Programs run concurrently with any printing or file transfer that may be going on. The *Relay* editor may also be accessed by scripts, so files can be downloaded, processed in the

ing computer transferring a file to an unattended receiving computer. The caller may perform most DOS functions and even run programs on the remote machine, though the display output is not echoed to the calling computer. Three types of password protection are available to prevent unauthorized access to the host PC.

If you need a comprehensive, powerful communications program, you'll delight in the many options *Relay* puts at your disposal.—David L. Hoffman

***** **Respond/Async**

Menu lovers will fall head over heels for Software Synergy's *Respond/Async*. Priced at \$129, it tries to please everyone—from beginners to programmers. Its Quick Start mode lets beginners use a few keystrokes to connect to on-line services. Programmers will like the program's script language: it lets you write a series of program components, called dialogues, that you can save in command libraries to automate communications.

The program takes up about 500K of disk space, but you can reduce its bulk by

deleting unwanted terminal emulation files. The 33-page Quick Start manual takes you through installation, start-up, communications profile configuration, and hookup quickly and fairly clearly. The manual has no tutorial, but introductory sections walk you through the usual operations. On-line help is available.

HEAVY ON MENUS *Respond/Async* is entirely menu-driven. Using what Software Synergy calls *Xpress* keys, you can jump to the program's major function screens. You can exit to DOS without breaking communications and run other programs from *Respond/Async* by defining "program profiles." Menu-weary users can write dialogues to automate command sequences or type successive menu commands quickly to move through the screens without pausing.

There is an Unattended mode through which you can set up your machine so that you or anyone else who supplies the specified password can operate it from a remote location.

Respond/Async's terminal emulation shines. In defining a terminal profile, you can select from screens of options that use

■ If what you need is a comprehensive, powerful program, you'll delight in *Relay*'s many options.

editor (sorted, for instance), and then saved to disk. *Relay*'s impressive concurrent capabilities are always available no matter whether a script is running.

PASSWORD PROTECTION *Relay* may be set to receive calls from other computers running a version of *Relay*. Remote file transfers can take place with the send-

Respond/Async's script language uses dialogues, or program components, to automate command sequences; the above dialogue contains commands for signing on to MCI Mail. Stored in a library, a dialogue can include up to 13 lines of commands.

How to pick th

Though most mice out there look pretty much alike, they're not all equal in performance. It pays to be just a little choosy to make sure you end up with the right mouse for your needs.

Starting with software. If you want full compatibility with all of your software, all you have to do is look for a mouse with the Logitech name. There are four in all, each one designed for different hardware needs.

THE HiREZ MOUSE

If you've got your eyes on a high-resolution screen, the mouse to get your hand on is the new LOGITECH HiREZ Mouse.

With a resolution of 320 dots-per-inch (as compared with 200 dpi or less for ordinary mice), it covers the same area on your high-res screen but needs less of your desk to do it. More than 50% less. Saving you valuable desk space, and

Good instincts run in this family (left to right): the new LOGITECH HiREZ Mouse (\$179), the only mouse designed expressly for high-res screens; the LOGITECH Series 2 Mouse for the IBM PS/2 (\$99, plugs right into mouse port); and the LOGITECH Mouse for standard screens (\$119, in bus and serial versions).

All come with Logitech's own Plus Software, which assures ease of use with virtually any software, mouse-based or not.

effort; mouse maneuvers that used to require sweeps of the hand are now reduced to a flick of the wrist.

Which makes this new mouse a hand's best friend. And a more reliable, long-lasting companion. And, like all Logitech mice, it's fully compatible with all popular software, and equipped with a Lifetime Guarantee.

THE SERIES 2 MOUSE

For those who've chosen the Personal System/2,* the most logical choice is the LOGITECH Series 2 Mouse. It's 100% compatible with PS/2, and plugs right into the mouse port, leaving the serial port free to accommodate other peripherals.

The LOGITECH HiREZ Mouse needs 50% less desk space to cover the same amount of screen area as a 200 dpi mouse.

e right mouse.

THE ALL-PURPOSE MOUSE: SERIAL OR BUS

Most people find our standard mouse is still the best choice for their systems. It's available in both bus and serial versions, one of which is sure to fit perfectly with your hardware. And with all your favorite software—whether mouse-based or not.

It's hardly an accident that only Logitech offers you such a complete selection—we're the only mouse company to design and manufacture our own products. We make more mice, in fact, than anyone else. Including custom-designed models for OEMs like AT&T, DEC, and Hewlett-Packard.

The three mice pictured to the left come with all this expertise built right in. Which explains an interesting paradox: while you may pay less for a Logitech mouse, you'll surely get more in performance.

And in comfort. With a unique lightweight ergonomic design. Low-angled buttons for maximum comfort and minimum fatigue. An exclusive technology that guarantees a much greater life span. An exceptionally smooth-moving, dirt-resistant roller ball. And natural compatibility with all PCs, look-a-likes, and virtually any software.

All of which leads to an inescapable conclusion: if you want to end up with the right mouse, start with the right mouse company.

Logitech. We've got a mouse for whatever the task at hand.

For the dealer nearest you, call 800-231-7717

**Respond/Async,
Version 4.19**
Software Synergy Inc.
641 Avenue of the
Americas
New York, NY 10011
(212) 645-9063
List Price: \$129

Requires: 256K RAM, DOS 2.0 or later.
In Short: A menu-driven program with a Quick Start feature that eases operations for beginners. Menus can become tedious, and circumventing them requires work. The script language works with other features to give total control over communications processes. Not copy protected.

CIRCLE 679 ON READER SERVICE CARD

the same definitions as those used in the emulated terminal's documentation. The advantage is that the terminology is familiar to people who use the specific terminals supported.

Respond/Async also offers complete emulation of the terminals it supports. Terminal emulation is less important for those who communicate only with other PCs or with major on-line services, but it's crucial for users who need to connect with computers or services that require specific terminals.

SCRIPT DIALOGUES Components of *Respond/Async*'s script language are called libraries and dialogues. A dialogue consists of up to 13 lines of commands. Dialogues are stored in libraries, with each library containing as many as 25 dialogues. You can create and save a total of 25 libraries. To create and edit dialogues, you must use *Respond/Async*, not another editor. *Respond/Async*'s dialogue commands can control variables, video display, data input and output, communications lines, telephone support, dialogue command flow, and error processing. Dialogues can call each other, and you can also chain them together.

Once you are familiar with using *Respond/Async*, its distinctive terminology may become second nature, but to novice users the program's references to libraries, directories, dialogues, and various types of

profiles can be confusing.

Respond/Async is easy to use but has plenty of power features for advanced users.—Bruce Brown

SideTalk

Lattice's *SideTalk* is a \$119 programmable communications program that can operate in the background or foreground. While basic operations are fairly straightforward, the program's script language, SideTalk Command Language (SCL), is a high-level language that facilitates powerful and fancy procedures. It's easy to create pop-up menus that include choices for command-driven functions.

To load the program on a hard disk, you put the system distribution disk or a backup in drive A:, make it the current drive, and type LOADST C:. *SideTalk* creates its own subdirectory on your hard disk, \ST, and copies all necessary files into it. You can use *SideTalk* with a floppy-disk-only system, but a hard disk drive is recommended if you're going to use the program in its RAM-resident, background mode. It works with any modem with a configura-

tion file written with SCL. The default configuration works for modems that are fully Hayes compatible.

In addition to a 52-page user manual, the documentation includes more than 100 pages of appendixes, most of which provide excellent descriptions of the SCL commands—including a definition of the syntax and all option flags, a complete description of the command operation and flags, one or more appropriate examples, and a "See Also" cross-reference to other relevant commands or chapters in the manual. It's easy to find what you need without being overwhelmed by lengthy, convoluted explanations.

There is no tutorial. Users who turn to this program should be just a notch above novice status. And for them the excellent program design and clear manual make the need for a tutorial program redundant.

Support is abundant. In addition to their customer support department, Lattice maintains an electronic bulletin board where you will find tips on using the program, public domain software you can download, and a forum through which you can chat with Lattice staff or with other users. Although there is a predefined phone

SideTalk's initial screen displays a status line and several Alt-key commands you can use while in terminal mode. F10 invokes the pop-up menu that helps you set parameters, build a phone directory, and make calls.

If You Could Input Anything Into Your Computer Instantly Without Using The Keyboard, Would It Make Your Life Easier?

Introducing DeskScan 2000. The affordable scanner from Chinon.

Chinon's unique new scanner could change forever the way you use your computer. With OCR software, it scans, digitizes and inputs text into your computer so that you can edit it with almost any word processing software. That means no more retyping of documents. Just think how much time that could save you and your staff!

DeskScan 2000 also scans images, so that you can input graphics too. Then you can manipulate these images with desktop publishing or graphics software.

Best of all, DeskScan 2000 is much lower priced than most effective scanners. That means it's finally cost-effective to put a scanner on every PC user's desk.

DeskScan's unique overhead scanning design means that you no longer have to separate pages from documents to feed them through a scanner. The document stays still while the scanning head "reads" the page. And the unit automatically adjusts for room lighting levels.

Scanners aren't just for desktop publishing any more. DeskScan 2000 becomes an economical FAX, with the simple addition of an inexpensive add-in board. Chinon sells

this exciting option and others in package combinations of bundled hardware and software—so that you have an affordable way of getting started with your scanner right away.

So see for yourself what DeskScan 2000 can do for you. Call TOLL-FREE 1-800-441-0222 TODAY for the DeskScan 2000 dealer nearest you.

SideTalk, Version 1.0
Lattice Inc.
2500 S. Highland Ave.
Lombard, IL 60148
(800) 533-3577
(312) 916-1600
List Price: \$119.95
Requires: 128K RAM,

two disk drives (hard disk recommended), DOS 2.0 or later.

In Short: Able to run in the background and transfer files while other DOS applications are running, *SideTalk* gets high marks for raw power. Though not the best for novices, it has a complete script programming language and lets DP managers easily develop user menus. Not copy protected.

CIRCLE 662 ON READER SERVICE CARD

directory listing in *SideTalk* for the LATTICE-BBS, the company has moved and the phone number is no longer valid. The new address and phone numbers are included on an announcement in the manual, and you can edit the LATTICE BBS listing in the phone directory.

SideTalk uses function keys, single-key-selection menus, Alt-key combinations, "point-and-shoot" menus, and a plain command line. It would be easy to lose control with such a multifaceted design, but Lattice kept it together. You will not find menus for every possible function, just the simpler ones. When you master the program and want to work faster, you can go to the command line (Alt-C) and type commands directly. Once you decide it's time to customize the system or to set up some fancy procedures, then you enter a programmer's world and use SCL.

You use the "ST" command to load *SideTalk* into RAM-resident mode and "ST/N" to run it as a standalone product. The program comes up in terminal mode, so you can type directly to the modem at that point. A list of Alt-key commands, resembling a menu, is displayed on the screen.

BACKGROUND POWER You can use most any program when *SideTalk* is operating in the background. Some activities, such as a long recalculation in a spread-

sheet, might suspend *SideTalk*'s activities, however. When *SideTalk* finishes downloading a file in the background, it beeps several times. At that point you can call the program up, issue more commands, or go off-line.

Lattice is best known for its C compilers, and the *SideTalk* Command Language doesn't disappoint. It provides a powerful set of commands that allow you to automate any communications process. The more-advanced uses of SCL will need an editor to create a command file. Unfortunately one is not provided.

SCL command files can be as simple as lists of acceptable *SideTalk* commands, similar to a DOS batch file. But with labels for subroutines, SCL files can use conditionals and be programmed to wait for specific times to carry out tasks independently. You can also use the SCL language to develop new menu systems. The language includes variables, string handling, error handling, file control (up to three files open at once), input and output commands, arithmetic functions, program flow control, and window operations.

SideTalk does simple tasks easily, but there are other, lower-end products that are cheaper and easier. *SideTalk* stands out for the power users who want to roll their own. For \$119.95, they can't go wrong; *SideTalk* delivers without overwhelming. —Bruce Brown

Smartcom III

Hayes Microcomputer Products, leader in the modem market, has introduced a new communications program, *Smartcom III*. This \$249 program is more than an upgrade of Hayes's earlier *Smartcom II* communications software, which is still available. Unlike *Smartcom II*, which has different error-correcting protocols, a different user interface, and no script language, *Smartcom III* is very versatile.

Smartcom III requires FILES=20 on your CONFIG.SYS file. It seeks confirmation from you, however, before automatically creating or modifying your CONFIG.SYS file.

The program is set to work with Hayes modems—either the older style or the new V-Series. There are no provisions to modi-

List Price: \$249

Requires: 512K RAM (640K recommended); two 720K floppy disk drives (third disk strongly recommended); DOS 2.0 or later

In Short: *Smartcom III* is designed for the new generation of machines. Although its high RAM and disk memory requirements make it the wrong choice for a floppy disk system, power users looking for an easy-to-use yet extremely sophisticated program will find it offers both. Not copy protected.

CIRCLE 661 ON READER SERVICE CARD

fy modem setup or initialization strings. Since it knows how to configure Hayes modems, there's no discussion of DTR, CD, and other RS-232 lines. *Smartcom III* will work with a three-line connection, but it can make use of more-complex connections if available. Setting the duration of the dialing tones and enabling the V-Series hardware error checking is about all the adjustments you will have to make. If you have a Hayes modem, there's no problem, but the program isn't guaranteed to work with anything else. So-called Hayes compatibility in other modems can be something less than total.

DIFFERENT TERMINOLOGY *Smartcom III* uses unique terminology. The settings that define the nature of the contact are called Activities and Connections. Activities settings control such elements as the screen display and printer setup, how files are to be transferred, execution of scripts, and the like. Connections settings adjust such functions as bit-per-second rate, direct versus modem connections, modem control settings, and so on.

Generally, you first create an Activity for each service, bulletin board, or other computer system with which you communicate, then choose which Connection you want to use. A variety of activities and connections are included.

IN OUR FAMILY ONE GOT THE LOOKS,

ONE GOT THE BRAINS,

ONE GOT THE DRIVE.

Fortunately, they all inherited the genius of Sony.

The new CPD-1303 Multiscan™ Monitor is the inspired offspring of the CPD-1302 monitor. While the CPD-1303 is less expensive, it still leads the way in variable frequency monitors. Boasting a Sony Trinitron™ Microblack™ Screen, a resolution of 800H x 600V and total Multiscan-VGA compatibility. Of course, being a closely knit family, we also share a lot of great memories. Thanks to our CD ROM with a large 640MB capacity memory.

And what's the driving force behind our family? Why, our innovative Sony Disk Drive. Brought to you by the same people who invented the 3.5 inch disk drive. Only now you can add this standard technology to your existing system, and take advantage of the latest software formats available.

Smartcom III's split-screen editor lets you enter long commands into scripts by pointing and choosing. This process, which indicates where to place prompt messages and variable names or filenames, saves time and reduces typing errors.

Smartcom III's user interface is completely textual but intuitive and logical. You don't miss the graphics at all. It uses a combination of menu styles and window frames suitable to communications.

USING THE LANGUAGE There is a comprehensive, well-written, context-sensitive help system. Moreover, Smartcom III has a text file editor that you can use for composing messages or for writing scripts.

When you write scripts, a window appears that contains all the language's statements. It lists the statements alphabetically or in functional order, according to your choice. When you select one, it appears in your script and indicates where you need to place prompt messages, variable names or filenames, and the like. This cuts down on typing and reduces errors.

Smartcom III's SCOPE (Simple Communication Programming Environment) language is powerful, flexible, and reasonably easy to learn. The language is not as structured as modern BASICs, so you have to use lots of GOTOs to control program flow, and the syntax is rather wordy. Scripts are compiled for faster execution;

the compiler checks for errors, inserts descriptive error messages, and returns you to the editor if necessary—an excellent and helpful system. SCOPE is unquestionably potent and could be used to program a bulletin board system or even games.

Smartcom III supports various permutations of Xmodem, Ymodem, and Kermit file protocols. Interestingly, Hayes's own Verification protocol introduced in Smartcom II is not supported (Hayes felt that the 1K-block Ymodem protocols outperformed the 512-byte Verification protocol). The CompuServe-B protocol isn't supported either—a disappointment to fans of that popular service.

SCRIPTS FOR REMOTE Smartcom III supplies a script for remote file transfer. Basically, this is a simple BBS that gives you the ability to download or upload files with Xmodem, Ymodem (checksum), Xmodem 1K, Ymodem-G, or Kermit. The script also requires the equivalent of many DOS commands, but you cannot execute programs on the remote system. The script includes password protection, though you might want to add multiple

password levels. If you prefer, you can simply use the Kermit screen to manage file transfers, with the remote computer acting as a Kermit master.

Smartcom III does allow you to drop to DOS locally while maintaining your connection, enabling, say, a long download to continue in the background. Hayes categorizes this feature as "undocumented" and discusses it only in a READ.ME file on disk. The company warns of possible incompatibilities, and you may have to adjust some environment variables to juggle memory allocation, but it worked well in our tests.

Smartcom III's panoply of features takes a heavy toll on system memory. Smartcom III requires 512K of RAM, and 640K is desirable. Say good-bye to memory-resident software. Anything other than a full quota of memory in your machine precludes using the program. In fact, Hayes strongly recommends a hard disk. You can shoehorn Smartcom III onto a portable with two 720K floppy disks, but it's a tight and uncomfortable fit. The slow floppies on most portables don't help either when loading the large modules.

Smartcom III may not be the best choice if you want one program to run in all environments and on all machines. It's big and bulky, but these days serious PC

■ **Smartcom III's**
panoply of features takes a heavy toll on system memory, but its script language is advanced and versatile.

users have hard disks and lots of RAM. Smartcom III's script language, however, is advanced and versatile. Smartcom III will be attractive to those using Hayes modems, and it may be something to consider purchasing if you're certain your non-Hayes modem is completely Hayes compatible.—Glenn A. Hart

■ COMMUNICATIONS SOFTWARE

***** **Softerm**

Softerm, a \$195 industrial-strength communications program from Softronics, has enough features to delight the most jaded PC user. It's not the sort of program you'd fire up on Friday nights to retrieve stock quotes—that would be like flying the Concorde across town. But you would turn to it if your boss asked you to write a bulletin-board system.

If all *Softerm*'s goodies (including terminal emulations, background communications, a full complement of script commands, queue management, and support for multiple operating systems) give you the impression that it also requires considerable time to learn, you're right. It can take weeks to master all the program's features. But installing *Softerm* is easy if you use one of the 23 supported modems.

EXTENSIVE EMULATION *Softerm* emulates almost every terminal on the market, including ADDS, Data General, DEC, Hazeltine, Hewlett-Packard, Honeywell, IBM, Lear Siegler, Perkin-Elmer, TeleVideo, and, of course, the ubiquitous dumb terminal.

After you've used *Softerm* for a few days, its menu-driven interface becomes

Softerm's menu-driven interface helps new users wade through the myriad options offered by the program, but more-proficient users will want to develop macros to save time.

more of an annoyance than a help. To disconnect from a call, for example, you use the Alt-2 combination to bring up the GOTO menu, then press F2 to pop up the Dial Utility menu, move the cursor to select the Hangup option, press Enter, and then use the Alt-Esc combination to return. Even with practice, this procedure takes time. To help you cope, Softronics blessed *Softerm* with the ability to accept keyboard macros. No keyboard macros come with the program, but the user's manual gives you several examples of how to create them.

TSR VERSION You can also install *Softerm* in an abbreviated TSR version, called the Communications Agent. This version can send and receive files in the background while you run conventional programs in the foreground. It does not conflict with other popular TSR software such as *SideKick*.

A queue manager allows you to put up to 128 tasks in the communications queue at one time, and to fire them off consecutively or in unattended operation by date

and time. The queue manager also controls multiple COM ports, so you can be exchanging files with four sources at the same time.

The Communications Agent enables *Softerm* to offer the File Agent, such a clever and simple option that it deserves an

■ **The Communications Agent enables *Softerm* to offer the File Agent, such a clever and simple option that it deserves an award.**

award. Here's how it works. You assign the communications port a device letter, similar to that of a disk drive—L, for example. Then, to download a file, all you have to do is issue a DOS COPY command, such as COPY L:\WEEKLY.DAT

FACT FILE

Softerm, Version 2.10.01
Softronics Inc.
7899 Lexington Dr.,
#210
Colorado Springs, CO
80920
(800) 225-8590

(303) 593-9540
List Price: \$195

Requires: 256K RAM, DOS 2.1 or later.
In Short: Since it's everything you ever wanted in a communications program and more, this sophisticated package is relatively difficult to use. If you take the time to learn its capabilities—background communications, a complete script facility, emulation for more than 30 terminals, queue management, and support for multiple operating systems—your effort at fluency is paid off in spades. Not copy protected.

IBM PC/XT, AT are the registered trademark of International Business Machine Corp.

PageMaker

Three years after inventing desktop publishing, the people at Aldus have just re-invented it. With a new version of PageMaker® dedicated

to one simple proposition:
freedom of choice.

From the beginning, PageMaker has given people unequalled control over all the elements of their publications. But now we've added many new features that also give you the ability to assemble even the longest documents with a couple clicks of your mouse. With PageMaker 3.0 the choice is always yours.

Here are a few of the new ways you'll have to exercise it.

Autoflow

Now you have the option of flowing text automatically to speed up long-document creation or placing it column by column for shorter, more design-intensive pieces.

Text Wrap

Our new text wrap function

gives you the choice of flowing text through an object, jumping over it or wrapping around it, like you see here.

And when you move a graphic, your text will automatically reflow

around it. You can also control the margin between text and image and, with a custom wrap feature, fit text to even the oddest shape.

Spot Color

Mix a virtually unlimited palette of colors based on any one of

three standard color models: RGB, CMYK or HLS. Then you can tag any element in the publication with a color by just clicking your pointer on it.

And, when you print your document, PageMaker 3.0 gives you the choice of a single composite image or separate sheets for each color use.

You can even place registration marks in the corners of your separated output for accurate assembly by a professional printer.

Style Sheets

PageMaker's style sheets give you the ability to create and apply style formats, including color, for all your text. And that allows you to reformat an entire story or document in a single operation.

Define styles

Style:

- BODY COPY
- LARGE HEAD
- SMALL HEAD
- SUBHEAD**
- TEXT

Buttons: New..., Cancel, Edit..., Close, Remove, Copy...

face: Times + bold + size: 18

Is Turning 3.0

You can also tag text in your word processor, database or spreadsheet for instant

formatting in
PageMaker.

And any style commands from

Microsoft® Word
files are read directly.

Templates

Since professionally designed templates are now

Included with PageMaker, it's

easy to give every document you create designer's touch.

You use the templates like

blueprints, placing your own headlines, text and graphics according to the designated styles and sizes.

High Quality Fonts

In addition to supporting a wide range of PostScript® fonts, PageMaker for the

PC now expands the capabilities of the HP LaserJet Series II and other PCL output devices.

That's because we're including four Bitstream® fonts and Fontware™, a special font generator, at no extra cost.

So you'll be able to create bit-map and screen fonts from 6 to 72 points in many versatile type faces. PageMaker 3.0 comes complete with Bold, Roman, Italic

E E E E E E E E E E

and Bold Italic variations of Dutch and Swiss (Bitstream's versions of Times and Helvetica) along with the Courier and Symbol typefaces. Which will give many people the ability to do even more with PageMaker.

Image Control

You can now adjust the lightness or contrast of any scanned image or bit-map graphic you place in it. And if you want to further customize, you can use one of our built-in

special effects, or even create one of your own.

If all this has whetted your appetite to find out more, visit your authorized Aldus dealer today.

And ask for the program that did a number on PageMaker.

PageMaker.

■ COMMUNICATIONS SOFTWARE

EDITOR'S
CHOICE

- HyperAccess
- ProComm/ProComm Plus
- Smartcom III

If you need a high degree of programming control or simply want the biggest and best, any program with a new-generation script language will serve your needs. However, Hayes Microcomputer Products' Smartcom III stands out for its innovative approach to communications and script language development, and for its straightforward menu system. The program's size (it requires more than 1MB disk space and 512K RAM) makes it unsuitable for anything less than a 286 machine with a fast hard disk. Yet, as reviewer Glenn Hart points out, that (and \$249) is merely the price you have to pay for using a program that advances the state of the art.

Among programs with advanced script languages, *HyperAccess*, IBM PC Revision 3.25 (\$149), is the winner. Not only does its script language border on new-

generation capabilities, but the program is easy to learn and use, and it offers the fastest file transfer we measured—both with the proprietary HyperProtocol and with the garden variety Xmodem. Any of these features would be worthy of note. Together they make a package that is hard to beat.

For those whose script language needs are minimal and whose communications needs are casual, *Datastorm's ProComm*, for a suggested contribution of \$50, or *ProComm Plus*, at \$75, is the clear choice. Speed of file transfer is on the slow side for both versions of *ProComm*. But for casual users, the mostly mnemonic commands are easy to learn and remember, the script language is adequate, and added features—like the host mode—are invaluable if you need them.

C:*. The File Agent copies the file from device L: (actually the remote computer) to your hard disk. It does so by intercepting all DOS file calls and executing a script file to import or export the named file. Anywhere you can use a filename, you can use the File Agent.

Both the Communications Agent and the File Agent require you to use a comprehensive script language to control their operations, and *Softerm* provides it. The script language is sufficiently powerful to program a four-port bulletin board running in the background, and for \$50 Softronics will sell you the script file it has developed to do just that. The script files included in the package are for routine tasks like logging on to The Source and CompuServe. Learning the language is not easy, but the manual includes examples, and Softronics maintains a telephone hot line that is

staffed by knowledgeable people.

Softerm is not without flaws. The lay-out of the file-transfer screen is poor; introducing color and graphics would help separate the status information from the display of the data being transferred. And since the phonebook dialer is case sensitive, you must remember exactly how you entered a name if you want to find it quickly. Also, the dialer waits 45 seconds before redialing a busy number, and you cannot change that parameter.

Because *Softerm* has so many commands and Alt-key combinations, learning to use it takes a lot of patience and some time. Nevertheless, the program certainly rewards your efforts, with extensive emulations, background communications, a complete script facility, queue management, and support for multiple operating systems.—Donald B. Trivette

Switch on a serious surge suppressor.

With test after test proving that 70-90% of all PC malfunctions can be traced to power problems, a surge suppressor is the first accessory you should buy for your PC. But don't put your trust in just any surge suppressor. Get one that gives your whole system superior protection. One that's engineered to the highest specifications.

Get a Kensington Master Piece® or Master Piece Plus. They're the most popular

PC surge suppressors. And the most serious. Because at Kensington, we're dedicated to giving your PC the best possible protection.

That's why Master Piece and Master Piece Plus are equipped with our unique two-stage surge suppression circuit, containing a high-speed silicon semiconductor for the quick reaction necessary and heavy-duty metal oxide varistors for the brute force required to keep even the largest surges from penetrating into your system.

That's why the plus in Master Piece Plus is additional modem surge suppression circuitry to protect your modem from surges, spikes and noise on the telephone line.

And that's why the circuitry in both models can handle anything an electrical storm or your local power company can offer — up to 6,000 volts with a 3,000 amp follow-on current. (That's the kind of superior performance that passes not only UL* testing, but Categories A and B of the strict IEEE¹ specification 587-1980 as well.)

Now, this may look to you like we're taking more than the necessary precautions. And actually, we are. But after all, isn't that what you expect from a serious surge suppressor?

Master Piece (\$149.95) and Master Piece Plus (\$159.95). For more info, or a dealer near you, call (800) 535-4242. In NY (212) 475-5200.

CIRCLE 111 ON READER SERVICE CARD

THE NICHE FACTOR

Demand for AT compatibles is stronger than ever, and manufacturers are jockeying for position in the market.

The latest machines reviewed here are from Amdek, American Mitac, Arche Technologies, Core, Dataworld, Epson, Hyundai, Kaypro, and Star Industries.

NINE ATs COMPETE FOR MARKET SHARE

Now that there is a general consensus that the standard base system for business computing in the next several years is going to be an 80286-based AT compatible running between 8 and 12 MHz, complete with 1 or 2MB of RAM (more when OS/2 applications are available) and a hard disk of at least 20MB, manufacturers of AT compatibles are competing for individual niches, following the age-old business adage that a small slice of a big market is just as good as total control of a small market.

For the computer buyer, price is no longer a barrier to AT-level performance. When *PC Magazine* evaluated 21 286-based systems configured with monochrome monitors and hard disks with total

price tags under \$2,000 ("The Cheapest ATs Ever," *PC Magazine*, February 16, 1988), we found that although quality and features varied significantly from machine to machine, over half of the systems were perfectly legitimate choices. And even the scrawniest one of the bunch could outperform an XT by a factor of two.

Prices of AT-compatible systems still cover a wide spectrum, however. Famous-name manufacturers like NEC, Epson, Leading Edge, and NCR can (and do) ask more for a 286 system than a big mail-order house like CompuAdd does. What you pay for is a comfortable measure of confidence: the known quality of a known quantity. But now that dozens of systems can be

*Optional †Standard

found south of the \$2,500 border, the big-name companies have had to take a hard look at their pricing structures. These days, a little shopping may lead you to a name-brand system discounted up to 30 percent. How else can such companies compete with machines like the 21 we recently reviewed, whose average configured price was about \$1,600?

WINNING WITH ORIGINALITY As price distinctions blur, buyers look to features to find differences between systems, and this is where the niche factor comes into play. One trend is the reemergence of backplane designs, which hark back to the good old days of CP/M machines when wide-open architecture was the name of the game. The TeleVideo Open Archite-

ture Solution series, the new Kaypro 286, and the Amdek System 286A represent three examples of the backplane design. (The Kaypro and Amdek machines are reviewed here.)

Why do it? By putting the vital chips on expansion cards rather than on the motherboard, the box is theoretically immunized against obsolescence. When your desire

for a 386 processor becomes unbearable, you'll just buy one on a card and swap it into a slot.

Do you care about the size of your system? Some people would pay any price to get that big AT box (21 inches wide) off their desk. Many recently introduced AT compatibles let you do that; machines reviewed here from Amdek, American Mi-

tac, Arche, Epson, Hyundai, and Star Industries are good examples. One note of caution: designers of smaller system units have two methods of achieving their slim-down goals—by cutting out drive bays or cutting out expansion slots. You should make sure that the small-footprint machine that has caught your eye will accommodate all the devices you need. One way small-footprint manufacturers can compensate for a dearth of slots is to install a well-designed motherboard that can provide many of the functions normally assigned to slot-hungry multifunction cards (memory expansion, parallel and serial ports).

SPEED MACHINES The year 1988 has seen the introduction of souped-up versions of older AT favorites. The Epson Equity III Plus, for example, has been revamped and now runs at a top speed of 12 MHz, up from 8 in the original model. Speed is always an advantage—at least until you run into a small attack of software incompatibility. This is less of a problem than it was a year ago ("High-Speed ATs: Life in the Fast Lane," *PC Magazine*, April 14, 1987), but it's important to choose a machine that can be throttled down, either by an external switch or a set-up program, when the need arises.

Reviews of nine new AT-compatible systems follow. They are the most recent arrivals to PC Labs, and they represent a good cross section of the market as it exists today. The cheapest—the Star Industries AT 286—is \$1,273 configured with hard disk and monitor; the most expensive—the Amdek System 286A—is over \$4,500 fully configured. There are names you know (Epson, Kaypro, Core) and names you may never have heard before (Mitac International is a Taiwan-based manufacturer, and Arche Technologies is a division of Pro-Kennex, the tennis racket people). Rounding out the group are a new machine from Korean giant Hyundai and a mail-order bargain from Dataworld. In the near future we will review two more new competitors who are joining the fray—the Leading Edge Model D2 and the PC's Limited System 200.

Shopping for an AT compatible is more complicated than ever, but having a wide range of machines to choose from means

you're that much more likely to find the system that's perfect for your needs and your budget. Reviews follow in alphabetical order by manufacturer's name.

—Donald P. Willmott

AMDEK CORP.

Amdek System 286A

The Amdek System 286A is a classy, fast, and upgradable small-footprint AT-compatible machine. From its 16-character LCD system unit display to its modular internal design, the 286A is pleasing to look at and a joy to use.

The 286A costs \$2,495 and comes with 1MB of 80-nanosecond RAM, a Phoenix ROM BIOS for IBM compatibility, and a dual-speed 8- or 12.5-MHz clock. It flies along at zero wait states and achieved the fastest performance in benchmark testing of processor and memory speeds.

The 286A system box design is high-tech looking. It's 6 1/2 inches high, only 15 inches wide, and a full 17 inches deep. You turn the machine on with a front-mounted power button and select system performance clock speed with a second front-panel button. The LCD tells you the time, date, and current operating speed. You can also toggle a performance indicator that uses a horizontal bar graph to display relative processor efficiency depending on the task at hand. The liquid crystal

CHOICE

FACT FILE

Amdek System 286A

Amdek Corp.
1901 Zanker Rd.
San Jose, CA 95112
(408) 436-8570

List Price: With 1MB RAM, one 1.2MB 5 1/4-inch floppy disk drive, DOS 3.2, \$2,495; with 40MB hard disk, \$3,595; monochrome monitor and card, \$360; EGA monitor and card, \$1,145.

In Short: Largely OEMed from its sibling, Wyse, the small-footprint System 286A is a high-quality, 12.5-MHz 80286 system with nice finish work and a fine 101-key keyboard. Modular motherboard allows for future upgrading without your having to buy a new machine. In this case, you do get what you pay for.

CIRCLE 843 ON READER SERVICE CARD

■ NINE ATs COMPETE

The most interesting feature of the neatly designed Amdek System 286A is its motherboard, or lack thereof. Because the processor and other essentials reside on an expansion card, future upgrades are not only possible but easy as well. The system is an Editor's Choice.

display isn't important to system performance itself, but it's a nice touch.

SETUP SOFTWARE The Amdek setup software uses a single screen display. All you need to do in order to configure your

machine is to use the Enter key and the keyboard function keys. Preparing the 286A for use is made simple by a high-quality, 64-page installation and assembly manual. The system also includes disks and manuals for DOS 3.21 and GW-BA-

SIC and three utility software packages: Diskcache, Help, and Diskpack.

You can install up to three half-height devices in the 286A. The evaluation unit came with a 1.2MB 5¼-inch floppy disk drive and a 28-millisecond CDC 40MB hard disk. The 190-watt power supply has three power leads for disk or tape drives.

The 286A's internal electronics are different from the norm. Many of the chips and much of the operational circuitry normally found on the motherboard are located on two vertically mounted boards that plug into the motherboard. The plug-in devices include both the system's CPU and RAM chips.

This setup, actually manufactured by Wyse Technology, uses the motherboard more as a bus in which to plug compatible devices than as the repository for the actual brains and chief operating devices of the computer. The major advantage to this modular design is the potential it affords for easy improvement: you can upgrade the system with a faster processor or different memory just by pulling out a board. Amdek currently has an 80386 board in the works that will plug into this system board. Pricing has not yet been set.

Standard equipment includes a combination floppy/hard disk controller, as well as one parallel and two serial ports. The 101 key keyboard supplied with the 286A is another piece of good news. It is manufactured by Wyse for Amdek and has tactile response, with good travel and a nice click. It's almost as good as the "real" IBM Enhanced keyboard.

Amdek uses the standard IBM work-alike Phoenix ROM BIOS: in this case, Version 1.83. It easily passed the benchmark tests that are dependent on BIOS compatibility.

UPSCALE MACHINE The Amdek is definitely an upscale machine and is sold through a dealer network that also furnishes service and support. While the 286A is not as expensive as IBM or Compaq machines, it's on the high end of the price scale of most of the AT-class computers we've tested. With a reasonably fast 40MB hard disk and an EGA video board and monitor, the 286A lists for \$4,740—that's \$1,250 to \$1,900 more than the prices of other similarly equipped

Presenting the Ricoh PC LASER 6000 personal printer.

At six pages per minute, it's the perfect tool for people who like to work, not to wait. A printer that'll give your input the kind of output you'd expect from a machine four times its size.

Its sleek, compact body measures in at a mere 16 inches wide and 16.5 inches deep. Which practically gives you the freedom to place it just about anywhere in your office. (However, we simply suggest you put it next to your PC.)

It also comes with its own printer control language that's supported by a variety of popular software programs. Add one

CIRCLE 749 ON READER SERVICE CARD

of our optional emulation cards, and your choice of compatible software is virtually unlimited.

The Ricoh PC LASER 6000 also has one megabyte of memory (expandable to two) so you can print the most sophisticated desktop publishing graphics.

And best of all, it's very affordable.

So, the next time you're waiting around for your current office printer to print, look into buying a Ricoh PC LASER 6000 for yourself.

It's a great way to get out on your own.

For more information on the Ricoh PC LASER 6000, call 1-800-HI-RICOH.

RICOH
LASER PRINTERS

To each, his own.

Choose the Wrong

"I just assumed..."

These are the three most deadly words in business.

When others hear them, they know what happened.

Someone didn't do his homework.

Someone didn't ask the right questions.

Someone didn't think.

The next operating system you choose will have far-reaching consequences...in terms of cost, compatibility, and connectivity. Make sure your recommendations aren't based on false assumptions.

"Tell me again why our next operating system will cost over \$1,000 per computer"

When they tell you that OS/2 will be a low-cost upgrade, don't believe it.

Computerworld's March 7, 1988, front-page story stated that OS/2 could cost "nearly \$5,000 in additional expenses" for each IBM PC AT ...to cover the costs of memory expansion and a new display.

"Even if you just bought an IBM Personal System/2 Model 50 last week," the report continued, "you are probably looking at extensive upgrade costs..." \$1,750 for more memory, alone.

Plus, you'll need to add the costs of new applications software, the costs

Operating System...And You'll Pay.

of training, and the costs of the system.

All in all, a very expensive upgrade.

"How can you say this operating system is compatible...when half our computers can't even run it."

Take a look around at the mix of PCs your company uses.

Think one version of OS/2 can be used as a company standard?

Think again.

Because each brand of 80286 or 80386 PCs or PS/2s needs its own machine-specific version. And each version has its own set of hardware and software compatibilities.

8088-PCs are totally out of the picture, and PC-DOS programs don't run while you're interacting with an OS/2 application.

"So you're telling me that to play it safe, we should use the operating system's network... or use none at all."

Open architecture is what built the business PC industry...because it enables you to mix and match the best software with the best hardware for your specific needs.

Which makes you wonder just how smart it is to install an operating

system designed for a specific network... that may or may not be best for you. That may or may not be compatible with the networks you already have.

Our competition wants you to buy it all from them.

We give you a choice.

So we're compatible with the networking standard: Novell.

We take advantage of the fastest software-driven network: LANLink 5X.[™]

And we work with the standard in micro-to-mainframe connectivity: Irma by DCA.

"What's this I've heard about operating systems designed for multi-user work groups?"

In short, they're the way of the future.

Because they address the very same needs that most concern you.

Like cost, compatibility, and connectivity.

PC-MOS is a unique DOS-compatible, multi-user operating system. It lets departments use inexpensive dumb terminals (or 8088-PCs running terminal emulation software) in combination with host computers.

Because it's multi-user, you can share a PC's data, programs, memory, and processing power with workstations costing under \$500, each.

"If PC-MOS can save us over \$1,000 per user, why aren't we using it?"

Good question.

Because with PC-MOS, you get an operating system that lets you share your computers' resources instead of forcing you to spend up to \$5,000 per user upgrade.

PC-MOS was designed to be an operating system standard for the mix of 80286 and 80386 PCs in your company. So you don't have to worry about varying levels of compatibility among your PCs.

It's an operating system that provides compatibility with the hardware and software you have. And it provides a migration path to future applications which will take advantage of the 80386 processor's 32-bit mode.

PC-MOS is available for both 80286 and 80386 PCs and PS/2s.

It comes in single-user, five-user, and 25-user versions, starting at \$195, all of which include a money-back guarantee.

For complete details, call The Software Link at 1-800/451-LINK.

■ NINE ATs COMPETE

machines in this round of AT-type computer testing. But the 286A's class shows in both its design and performance, and the modular design could save you money later on system upgrades.—Bruce Brown

AMERICAN MITAC CORP.

Mitac Paragon 286F

The small-footprint Mitac Paragon 286F, from American Mitac Corp., has the most expensive base price of the AT compatibles reviewed here, but it also has the largest number of standard features. For \$3,495 you get 1MB RAM, two floppy disk drives, a 40MB hard disk, and an EGA monitor. Clearly, Mitac wants to be considered a one-stop shopping solution.

The most unique feature of the Paragon 286F is the vertical 3½-inch drive bay on the right-hand side of the machine. The 720K 3½-inch microfloppy disk drive that sits inside it is a standard feature (along with the customary 5¼-inch drive) and makes media transfer as easy as typing COPY A:* B:. Like IBM, Mitac is making a move toward the 3½-inch media standard. But, unlike IBM, it is doing it with low-density drives. A 1.44MB drive would have been a better choice.

SHRINK-WRAPPED Despite the small footprint (it's only 14¼ inches wide), the Paragon 286F does not skimp on features, though its mass storage capability is limited.

FACT FILE

Mitac Paragon 286F
American Mitac Corp.
410 E. Plumeria
San Jose, CA 95134
(408) 432-1160

List Price: With 1MB RAM, one 1.2MB 5¼-inch floppy disk drive, one 720K 3½-inch floppy disk drive, 40MB hard disk, 12-inch EGA monitor and card, VGA controller on board, DOS 3.2, \$3,495. Monochrome monitor and card, \$119.

In Short: A high-quality 12-MHz 286 machine that comes with a hard disk and monitor included in the base price. The EGA monitor isn't great, but the rest of the system is top-notch, and the standard 3½-inch microfloppy disk drive is an extra advantage.

CIRCLE 676 ON READER SERVICE CARD

The Mitac Paragon 286F has a vertically mounted microfloppy disk drive to the right of its drive bays, giving it a unique appearance. The small-footprint package includes just five expansion slots, but all the vital ports, including video, are built into the motherboard.

Introducing the most agile mouse ever to set foot on a desktop.

The LOGITECH HiRez Mouse—the only mouse expressly designed for high-resolution screens.

With a resolution of 320 dots-per-inch (as compared with 200 dpi or less for ordinary mice), it covers the same area on your high-res screen, but needs less of your desk to do it. More than 50% less. Saving you valuable desk space, and effort: mouse maneuvers that used to require a sweep of the hand are now reduced to a flick of the wrist.

The LOGITECH HiRez mouse needs 50% less desk space to cover the same amount of screen area as a 200 dpi mouse.

Which makes this new mouse a hand's best friend. And a more reliable, long-lasting companion—fully compatible with all popular software, and equipped with a Lifetime Guarantee.

Equipped, too, with other advantages exclusive to all Logitech mice: A unique lightweight ergonomic design. Low-angled buttons for maximum comfort and minimum fatigue. An exclusive technology that guarantees a much greater life span. An exceptionally smooth-moving, dirt-resistant roller ball. And natural compatibility with all PCs, look-a-likes, and virtually any software.

So if you've got your eyes on a high-res screen, get your hands on the one mouse that's agile enough to keep up with it.

The LOGITECH HiRez Mouse.

For the dealer nearest you, call 800-231-7717 (800-552-8885 in California), or write Logitech, Inc., 6505 Kaiser Drive, Fremont, CA 94555. In Europe, call or write: Logitech Switzerland, European Headquarters, CH-1111 Romanel/Morges, Switzerland (++41-21-869-9656).

 **LOGITECH**

CIRCLE 182 ON READER SERVICE CARD

■ NINE ATs COMPETE

ed. There is room up front for two exposed half-height devices, as well as the vertically positioned microfloppy drive. All the bays were filled on the evaluation unit with standard equipment: a 1.2MB 5¼-inch floppy disk drive, a 40MB half-height hard disk, and the 720K microfloppy disk drive. Though the motherboard offers only five expansion slots (four 16-bit and one 8-bit) it compensates by offering two built-in serial ports, a parallel port, the floppy disk controller, and the enhanced EGA video port. The only slot that needs to be occupied to run the machine is the one holding the hard disk controller.

The front panel of the machine includes the drive bays, a lock, the on/off switch, a reset switch, and lights to indicate hard disk activity and 12-MHz turbo mode.

In microprocessor testing, the Paragon 286F performed on a par with other 12-MHz machines. Its 8-MHz operation was also without surprises. The 40MB Microscience hard disk that was installed in the Paragon 286F was an able performer and rated an average access time of 32 milliseconds in the hard disk benchmark tests. The Phoenix ROM BIOS ensures excellent compatibility.

The 12-inch EGA monitor included with the system produces good text, but the colors are hazy, lacking the vibrancy that EGA users demand. A switch below the screen allows the user to select green, amber, or white characters in text mode. Here is where the one-stop shopping solution stumbles. Getting ten pieces put into

one system for one price is certainly an easy way to shop, but what if one of the pieces (a \$500 piece in this case) is unacceptable?

KEYBOARD CONSIDERATIONS

Since it plugs into the front of the computer and has an extra-long cord, the keyboard, which seems oversized when placed in front of the diminutive chassis, can be used far from the screen. It is of the standard 101-key IBM Enhanced-style design and has a soft touch with little audible feedback.

Standard software includes DOS 3.2 and its manuals and Ontrack's *Disk Manager*. A clear and well-illustrated user manual also comes with the system. Given the fact that a 40MB hard disk is standard, Mitac might want to consider including DOS 3.3 with the Paragon 286F so that disk partitioning is not necessary unless the user wants to do it. All Mitac machines come with a 1-year warranty.

The Mitac Paragon 286F is by no means a bargain machine, though its every-thing-for-one-price packaging makes the \$3,495 price tag understandable. Mitac has positioned the system as a corporate solution, and it is but one member of a family of PCs that range from an XT-class machine all the way up to a 20-MHz 386-based PC. In the 80286 category, Mitac also offers the Paragon 286VE, a 16-MHz 286 machine priced \$500 above the level of the Paragon 286F. Evaluation units were unavailable at the time of this review.

If you're operating with the kind of budget the Paragon 286F demands, the machine is worth a look. Mitac's attempt to distinguish itself by traveling the high-quality road in the AT-compatible market is, for the most part, successful.

—Donald P. Willmott

ARCHE TECHNOLOGIES

Arche Rival 286

Although Arche Technologies is a new player in the computer field, its parent company, Pro-Kennex, is an established manufacturer of racquetball and tennis rackets. The \$1,795 Arche Rival 286 is made in the United States and is built upon the same principle of quality that has given Pro-Kennex its competitive market edge.

EDITOR'S
CHOICE

FACT FILE

Arche Rival 286
Arche Technologies
745 High St.
Westwood, MA 02090
(800) 422-4674
(617) 461-1111 (in Mass.)
List Price: With 640K RAM, one 1.2MB 5¼-inch floppy disk drive, 14-inch monochrome monitor and card, DOS 3.3, \$1,795; with 1MB RAM, \$1,995; with 20MB hard disk, \$2,195, EGA monitor and card, \$600.
In Short: An aesthetically designed and solidly built 12-MHz 286 machine, the small-footprint Arche Rival 286 performs in the same range as do other machines in its class (with the exception of its slow, optional 70-millisecond hard disk). Its beautiful 14-inch flat-screen monochrome monitor really sets it apart.

Circle 682 on Reader Service Card

Arche Technologies is so confident of the Arche Rival 286's construction quality that it offers a 2-year warranty.

The first thing you notice when you look at the Arche Rival 286 system is its small footprint—6 inches high by 17 inches wide by 17¼ inches deep—and aesthetically pleasing design. Its solid construction and attention to detail—everything is nicely finished inside and out—inspire confidence.

SWITCHABLE SYSTEM The Arche Rival 286 is an 8/12-MHz switchable system. The turbo switch and the reset switch are conveniently located on the front panel of the system; however, the power switch is located in the customary place on the right side of the case. An indicator light lets you know when you're operating at the 12-MHz turbo speed.

But the most striking system component is the 14-inch amber monochrome monitor, which is manufactured by Arche Technologies. This flat-screen phosphor display has 1,000-line resolution in the center of the screen and 800-line resolution at the corners. It has the usual brightness and contrast controls on the left side of the monitor and has vertical and horizontal hold adjustments at the rear of the monitor.

The monochrome video adapter board that comes with the system doesn't have

THE ENTRÉ ANSWER BOOK TO PC UPGRADES.

WHAT YOUR OLD COMPUTER SYSTEM NEEDS IS SOME NEW INFORMATION.

Since you last bought a microcomputer system, you may have noticed that they are getting more powerful, more productive and less complicated all the time. You may also have wondered how you're going to keep up.

Do you try to get more out of the system you have? Do you opt for enhancements to improve speed and memory? Or would it be more cost effective just to buy a new system?

At Entré, we understand your concerns. In fact, we've written a book about it. It explains in clear, concise English how you can make your system more productive and more efficient. And how the experts at your local Entré Computer Center can help you with products, training, service and support.

What's more, it's free. Just send the coupon to Entré or call 1-800-635-7500. It could be the most important data you've ever called up.

Insist on a Sysgen 5 $\frac{1}{4}$ " drive for your PS/2.

Here's why:

A Sysgen™ Bridge-File™ gives a PS/2™ full access to your current data and software, with unparalleled 5 $\frac{1}{4}$ " disk drive performance and reliability. You get:

- A larger capacity drive. Two modes — a 360Kb and a powerful 1.2 Mb — assure you comprehensive transfer capabilities and convenience for total office needs. Others, like IBM's, offer only 360Kb. Proven reliability. In fact, Sysgen is the choice of over 100,000 satisfied Bridge-File and tape back-up users.
- No slot loss. The Sysgen 5 $\frac{1}{4}$ " drive adapter card doesn't take any additional slot space. IBM's does.
- Built-in flexibility of an external connector. You can add another Bridge-File drive or Sysgen's high-performance tape back-up system, Bridge-Tape™. (As a Bridge-File owner, you receive a total savings of \$135 on Bridge-Tape!) What's more,

Sysgen's footprint is smaller. A full 50% smaller than IBM's. For the best PS/2 access to 5 $\frac{1}{4}$ " disks, and the best value at only \$325, insist on Sysgen Bridge-File.

Sysgen offers the only complete family of data transfer products: Including the 3 $\frac{1}{2}$ " Bridge-File floppy disk drive, for transferring information from any PS/2 to any PC. And the Bridge-Tape subsystem that's PC and PS/2 compatible, giving you total tape back-up and data transfer flexibility.

Call for Sysgen literature or for the location of the Sysgen dealer nearest you.

CIRCLE 173 ON READER SERVICE CARD

■ NINE ATs COMPETE

An Editor's Choice, the Arche Rival 286 is most admirable for its excellent 14-inch, flat-screen high-resolution amber monitor, which is standard in the \$1,795 system. Hard disks are available, but you'd do best to add your own. The tested disk turned in a 70-millisecond access time.

graphics capabilities, so I replaced the original board with a Hercules graphics board. The display was even better yet; this monitor is a standout.

The system is designed around the Chips and Technologies' VLSI AT chip

set. The unit I evaluated came with 1MB RAM on the motherboard, although 640K RAM is standard for the basic system. Four banks of 256K bit 100-nanosecond parity-checked RAM chips are arranged in a standard configuration, running with one

wait state. There is an open socket available for the Intel 80287 coprocessor chip.

The Arche Rival 286 has the usual eight expansion slots (two 8-bit and six 16-bit) and has three half-height drive bays. The clock/calendar uses a rechargeable 3/600K nickel cadmium battery from Varta. This battery will recharge itself from the power supply and should last 5 years or so; the 200-watt Senstron power supply has four device connectors. The system I evaluated came with a 1.2MB 5¼-inch Teac floppy disk drive, which is not spring-loaded, and a 20MB Seagate ST-225 hard disk. Although Seagate produces reliable hard disks, this one is slow—rated at 70 milliseconds. Since it will cost you an extra \$400 over the base system price, I would recommend that you look elsewhere and get a better price—or a faster disk.

The basic \$1,795 price includes DOS 3.3. The Award Software setup program, which is part of the Award BIOS, is encoded into 200-ns. EPROM chips and is accessible from the keyboard by pressing the Ctrl-Alt-Esc key combination.

The manual was away at the printer's at review time, so Arche sent me a typeset copy. The 54-page version I saw seems to be directed toward the novice; it's well written, contains lots of pictures and a good index, but has little in-depth technical information.

HOMEMADE Many components of the Arche Rival 286 are manufactured by Arche Technologies: the controller card can handle two floppy disk drives and two hard disk drives; the monochrome video adapter/printer card has a 9-pin TTL video port and a 25-pin parallel port; and the peripheral port card has another 25-pin parallel port and two serial ports.

The keyboard supplied with the system is Unitek's enhanced AT-style 101-key keyboard. It has a good, stiff, over-the-center feel though it can't really approximate the feel of an IBM keyboard.

The Arche Rival 286 is a consistently solid, although not spectacular, performer for its class. It sets itself apart with its aesthetic styling, quality construction, and a superior monitor. The only weak link in this otherwise solid system is the extremely slow (and optional) hard disk.

—Catherine D. Miller

PC Connection Software Special

through July 31, 1988

No!o Press ... NCP □ WillMaker 3.0

Now you can prepare your own valid will without a lawyer. Even the American Bar Association Journal called this "a nice, easy-to-use program." Following a simple question-and-answer format on-screen, in plain English, WillMaker allows you to:

- Leave specific items to your spouse, children, grandchildren, domestic partners, friends, and charities
- Name a guardian to care for your minor children
- Create a trust for your minor children
- Easily update your will as necessary

For PC, XT, AT & PS/2 ... \$35.

OUR POLICY

- We accept VISA and MASTERCARD.
- No surcharge added for credit card orders.
- Your card is not charged until we ship.
- If we must ship a partial order, we never charge freight on the shipment(s) that complete the order (in the U.S.)
- No sales tax.
- All U.S. shipments insured, no additional charge.
- APO/FPO orders shipped 1st Class Mail, charged by weight.
- Allow 1 week for personal and company checks to clear.
- C.O.D. max. \$1000. Cash, cashier's check, or money order.
- 120 day limited warranty on all products.*
- To order, call us anytime Monday thru Friday 9:00 to 9:00, or Saturday 9:00 to 5:30. You can call our business offices at 603/446-3383 Monday through Friday 9:00 to 5:30.

SHIPPING

- Note:** Accounts on net terms pay actual shipping.
- Continental US:**
- For monitors, printers, Bernoulli Boxes, and computers, pay actual charges. Call for UPS 2nd Day & Next Day-Air.
 - For all other items, add \$3 per order to cover UPS Shipping. For such items, we automatically use UPS 2nd-Day-Air if no extra charge if you are more than 2 days from us by UPS ground.
- Hawaii:**
- For monitors, printers, Bernoulli Boxes, and computers, actual UPS Blue charge will be added. For all other items, add \$3 per order.
 - Alaska and outside Continental US: Call 603/446-3383 for information.

For IBM Personal Computers exclusively.

PC Pride.

It's not Greek to us. By Jove.

The town of Marlow, NH (pop. 553) is steeped in myth and tradition. Even as we speak, our Herculean mascots are celebrating the Summer Olympiad by running and jumping their frivolous little hearts out. Meanwhile, we ordinary mortals continue to set new world records for sales and support of award-winning programs and peripherals.

Hit us with your best shot. (Or, the myths of mail order).

Back in the days of yore, not-so-perspicacious PC pundits proclaimed that no mail order house could have enough pride to satisfy serious customers. They said the big bears of retail would crush our humble enterprise and we'd return to the sidelines with our flag in tatters. Since then we've vaulted, sprinted, jumped, dived, bumped, spiked, and generally hurdled ourselves headlong into the hearts and minds of PC users all over the world.

We've known the thrill of victory when your ports are pumping and performance is perfect. But, we also know the agony of defeat when your jumpers aren't jumping and your disks fall short. That's why our intrepid team of sales consultants is always in training to reach new heights of after-sale support.

Gopher! The gold, please.

When you go to trade shows you need something to trade and something to show, right? Well, how about the PC Connection Raccoon Pride Pin? You probably won't want to trade this soon-to-be-if-not-already-valuable memento of microcomputer mastery. But you will want to show it off. Get one of your very own with an order of \$500 or more between now and July 31st.

Just call 1-800/243-8088 or 1-603/446-3383, M-F 9:00 to 9:00; Saturday to 5:30. If you're planning to visit please call ahead.

Display your PC Pride with a special pin featuring our own clumsy chameleon and bonus for glory mascot. Offer not available to net accounts. One per customer.

For IBM Personal Computers exclusively.

■ NINE ATs COMPETE

CORE INTERNATIONAL Core ATomizer

In the past few years we have seen AT compatibles marketed by companies that are well known for making other things like monitors, printers, and even cars. Now consider the long-awaited revision of the ATomizer, from Core International, a maker of high-performance hard disks.

Core has taken its advanced disk drive technology and fed it into an AT clone with positive results. At \$1,350, the ATomizer comes with 512K RAM; a 1.2MB 5¼-inch floppy disk drive; one parallel and one serial port; a combination floppy/hard disk controller; an IBM Enhanced-style keyboard; and six 16-bit and two 8-bit expansion slots. There is room for two more exposed half-height storage devices and one full-height disk drive. The 21-inch system unit is extremely sturdy and somewhat bulky; you may want to try to put it under your desk.

The ATomizer operates at a switchable 6, 8, or 12 MHz and contains the Phoenix BIOS, Version 3.06. Memory on the motherboard can be expanded to 4MB using 1MB chips, and additional memory can be included on expansion boards up to the 16MB limit.

HIGH-CAPACITY HARD DISKS The Core HCR controller card is specially equipped to run high-capacity hard disks

Core International's rugged ATomizer is a full-size 12-MHz AT compatible that, as you might expect, turned in the best hard disk performance times of the machines reviewed here. Inside, the standard AT-like eight-slot configuration is found.

List Price: With 512K RAM, one 1.2MB 5¼-inch floppy disk drive, DOS 3.3 or Xenix, \$1,350; 40MB hard disk, \$876; monochrome monitor and card, \$285; 14-inch EGA monitor and card, \$600.

In Short: A reliable, fast, 12-MHz machine with powerful mass-storage capabilities from a company known for its big, fast hard disks. The system is sturdy, with plenty of room for one or more full-height disk drives. An ideal machine for applications that require high capacity and speed.

CIRCLE 60 ON READER SERVICE CARD

and contains circuitry that can support hard disks using a 1-to-1 interleave. The HCR controller also passes information to and from the disks much faster than a normal ESDI/506 controller (like the one in the IBM PC AT) would. In order to take full

advantage of the HCR controller, you should use a high-capacity disk. Obviously, Core offers a number of different disk choices: some are aimed at those looking for a good buy, while others are geared toward those whose main concern is real

Of all the graphics you can create with Freelance Plus,

■ NINE ATs COMPETE

speed, the kind Core is famous for.

If you order an ATomizer equipped with a hard disk from Core, all you have to do is specify whether you'll be using DOS, OS/2, or Xenix. Core will low-level-format the hard disk and run setup by request. Core does not supply a copy of the operating system with each unit, but you can purchase one separately.

■ You pay a little more for the Core disk drives, but in return you get a machine that offers reliability, data security, and speed.

Our evaluation unit contained a Core Optima 40MB hard disk (\$876) with DOS 3.21 installed. It also included a respectable Mitsubishi-made 14-inch EGA monitor and adapter card (\$600), bringing the total cost of the evaluation unit to \$2,826. The ATomizer performed the benchmark tests with no major problems and finished first in disk testing.

The keyboard shipped with the evaluation unit was an 84-key, AT-style keyboard that had a mushy feel to it, but a representative said that Core now ships only 101-key, Enhanced-style keyboards with the ATomizer. The new keyboard did not arrive in time for evaluation, but it can only be better than the other keyboard.

The documentation is basic enough to guide new users through installation and setup and advanced enough for more-experienced users. Bundled with each ATomizer is Core's own Corefast backup and file management utility, as well as a Core utilities disk.

Included with the ATomizer are several manuals that contain separate sections for installing and configuring the disk drives, getting started with the Corefast backup program, and even instructions on upgrading for Novell software when using a Core disk drive.

TECH SUPPORT If you encounter any problems when configuring the ATomizer, Core offers free technical support for the length of the warranty. The warranty for the ATomizer system unit is 1 year; for a Core disk drive, 3 years. Extended 2- or 3-year warranties for the ATomizer (\$200 and \$350) are available.

When the unit is returned for repairs, Core pays the shipping one way. Problems with the system unit are fixed by third-party maintenance technicians, but if the Core disk drive is the problem, Core will replace it (for free if the problem occurs within the 3-year warranty period).

Based on price and performance, the ATomizer is a good buy. Even when you add the price of a hard disk, monitor, and adapter card, the system is a reasonable \$2,800 to \$3,000. You pay a little more for the Core disk drives, but in return you get a machine that offers reliability, data security, and speed.—Greg Alwang

DATAWORLD

Dataworld Data 286

The Data 286 from Dataworld, the southern California-based mail-order firm, is a zero-wait-state, 12-MHz machine with 512K of 60-nanosecond RAM, and a 12-inch EGA monitor and card. The Data 286 costs \$1,605 and comes in a full-size system box, 6½ by 19½ by 16½ inches (HWD), the advantage being the full complement of eight expansion slots: six 16-bit and two 8-bit. One of the 16-bit slots holds the hard/floppy disk controller.

The zero-wait-state memory setting is very fast, and Dataworld has chosen to ensure memory reliability with faster-than-normal RAM chips. While other vendors typically install 80-ns. chips for 12-MHz zero-wait-state machines, Dataworld uses more-expensive and faster 60-ns. chips. According to Dataworld, the 60-ns. chips have a better chance of working well under the high-heat situations that often occur in full-size boxes stuffed with expansion cards.

SWITCHING WAIT STATES If you want to switch between zero wait states and one, it's easily accomplished with a rear-mounted toggle switch. Other conveniences include front-panel buttons to

FACT FILE

Pico Rivera, CA 90660
(800) 722-7702
(800) 722-7734 (in Calif.)
(213) 695-3777

List Price: With 512K RAM, one 1.2MB 5¼-inch floppy disk drive, 12-inch EGA monitor and card, \$1,605, 40MB hard disk, \$585; 512K memory upgrade, \$150.

In Short: A fairly standard AT compatible that runs at speeds of up to 12 MHz at zero wait states. Very-high-speed 60-nanosecond memory chips help ensure reliable performance. The price is right, but service is available only on the West Coast.

CIRCLE 666 IN READER SERVICE CARD

switch between the 12-MHz turbo mode and the slower 8-MHz speed for products that don't work at higher speeds.

All of the internal components are either industry standards or acceptable substitutes. The finish work is of fine quality, and the box suitably rugged. The 200-watt power supply has four power lead device connectors and includes a switched outlet in which to plug a monitor power cord.

The Data 286 uses the ubiquitous Phoenix 80286 ROM BIOS, in this case Version 3.07/00. Phoenix setup software is also included, although the IBM Advanced Diagnostics setup program works as well.

The Data 286's keyboard is of the IBM Enhanced style and is manufactured by Focus Electronics. The keyboard is particularly good and a pleasure to work with. It has a reasonable amount of tactile feedback, good travel, and a reassuring click. It feels especially sturdy.

Neither DOS nor any version of BASIC comes standard with the Data 286, as it does with all the other machines reviewed here except for the Star Industries AT 286. The only software included is the setup program, so when you compare prices be sure to add \$99 for DOS and BASIC. A helpful booklet has fairly clear descriptions of system switch and jumper settings. The booklet also has an accurate line drawing of the motherboard and electronic

This is the one we're particularly proud of.

Lotus® Freelance® Plus is the most versatile graphics package for the PC. And that's probably why it's the #1 selling business graphics package on the market.*

Freelance Plus lets you create everything from data-driven charts like bar charts, to graphics based on ideas like flowcharts. And Freelance Plus is the complete graphics solution, because you get all the tools you need for creating effective business graphics in a single package.

What's more, Freelance Plus is compatible with other Lotus software, like 1-2-3®, Symphony®, and Manuscript®. And it's incredibly easy to use.

Find out why Freelance Plus has the biggest slice of the pie. To order a \$10 demo kit, call 1-800-345-1043 and ask for demo kit ADW-1658. **Lotus Freelance Plus**

■ NINE ATs COMPETE

The Datavorld Data 286 offers 12-MHz speed and excellent compatibility in a full-size chassis that may be hundreds of dollars less expensive than other AT compatibles. A system with a 40MB hard disk and an EGA monitor can cost as little as \$2,190.

components, a measure of detail other vendors sometimes omit. A 40-page user manual covers the system's installation and setup procedures.

Datavorld machines need to be shipped to the West Coast for service. The vendor

pays for ground shipping one way, and its service department tries for a 3-day turnaround. If you call with a service problem and the technicians are able to determine the faulty component over the phone, they'll have you take the suspect piece out

of your machine (if you feel capable) and ship it west, which costs less for both sides. The system comes with a 1-year warranty for parts and labor.

The bonus for accepting the potential service inconvenience is price. Our evaluation unit, complete with EGA card and monitor and the 40MB hard disk, was priced at \$2,439. You get a high degree of AT compatibility, faster memory chips than from most vendors, and several convenient features in a full-size box for significantly less than you would pay for other, name-brand computers at local dealers. —Bruce Brown

EPSON AMERICA INC.

Epson Equity II Plus

Epson America keeps right on rolling with new products and product updates. The Epson Equity II Plus is the latest version of Epson's small-footprint, all-purpose 80286 computer. With a base price of \$1,595, the 10-MHz Equity II Plus is \$500 cheaper than Epson's top-of-the-line Equity III Plus, which gives you more expansion slots, faster operation, a bigger box, and a top operating speed of 12 MHz.

For your \$1,595, Epson gives you a 640K, 8/10-MHz, one-wait-state AT compatible. Configured with a 40MB hard disk and an EGA monitor, the price of the system is \$3,643. The Equity II Plus completed all of our benchmark tests handily and achieved the speed performance scores its clock and wait-state setting would suggest. There are no surprises here, which is good news in a developed product niche that should be predictable but often isn't.

The Equity II Plus's system box is a small unit, 6.1 by 15.7 by 16.3 inches (HWD), that weighs 19.8 pounds. It doesn't take up much room on your desk, but if you put the 7.7-inch-deep keyboard in front of the system unit, you'll need a minimum desk depth of 24 inches plus some room in back for cables.

The computer is good looking but doesn't call attention to itself with any particularly startling exterior features. Inside the box, however, the power switch mechanism looks pretty silly. There is a long metal arm that extends from the front-mounted power switch to the back of the

The big idea behind the PC system you can't outgrow.

We call it Modular Systems Architecture™: a building block approach that protects your PC investment against obsolescence. It makes upgrading Wyse PCs a snap—literally. Because we've put all computing functions, even the CPU and its microprocessor, on plug-in boards. So as your needs grow, you can easily upgrade our 8 MHz AT compatible to a 12.5 MHz high performance 286, or even a 16 MHz 386. When more powerful microprocessors are available, you'll even be able to upgrade our top-of-the-line 16MHz WYSEpc 386.

The WYSEpc 386: exceptional memory speed plus processing speed make it one of the most powerful PCs made.

Introducing SystemWyse.™ Wyse PCs are themselves building blocks in a comprehensive system for creating solutions. They link effortlessly with our terminals, monitors, and expansion boards in integrated solutions of exceptional quality and value, using industry standard software. And SystemWyse is backed by the company that sells more terminals than anyone but IBM.

It's this easy to upgrade the CPU and boost the power of a SystemWyse PC.

The big idea, above all, is to adapt more readily to change than any other PC system. Because survival belongs not merely to the fittest, but to those who remain fittest, longest. Call for more information. **1-800-GET-WYSE**

Epson America Inc.
2780 Lomita Blvd.
Torrance, CA 90505
(213) 539-9140

List Price: With 640K RAM, one 1.2MB 5¼-inch floppy disk drive, \$1,595; with 40MB hard disk, \$2,795; monochrome monitor and card, \$248; RGB monitor and card, \$568; EGA monitor and card, \$848.

In Short: A small-footprint, 10-MHz system with quality components, most—including the BIOS—manufactured by Epson. The only markedly different components are separate floppy and hard disk controller cards that eat up an extra slot. Sold and serviced through dealers, so discounts can be found and service is close by.

CIRCLE 879 ON READER SERVICE CARD

machine and pushes a button on the 140-watt power supply. The mechanism seems out of place in an otherwise cleanly designed machine.

Configuring the Equity II Plus with the supplied Set-Up software is simple. It involves making selections from a single screen menu that lists options in pop-up windows. The Set-Up utility on IBM's AT Advanced Diagnostics disk also works.

The Equity II Plus is available with a variety of disk drive units. A 1.2MB 5¼-inch half-height floppy disk drive is standard with the system; a 360K 5¼-inch and a 720K 3½-inch floppy disk drive are optional. The only hard disk option is the 28-millisecond CDC 40MB hard disk that Epson also sells with the Equity III Plus. There is space in the system unit and power hookups for up to three half-height drive or tape devices.

INSIDE THE BOX You get just six expansion slots with this unit (three 16-bit and three 8-bit), though they are probably enough for most single users. The standard interface card includes the controller for the floppy disk drive and parallel and serial ports. It takes one of the 8-bit slots. If you add a hard disk to the Equity II Plus, you have to use a separate hard disk controller. The evaluation unit came with a Western Digital controller for the CDC hard disk.

The IBM Enhanced-style keyboard is

FINISH FINANCIAL WORK FIVE TIMES FASTER.

ALL NEW!
For Business and Home

Quicken finishes
all this in
under 5 minutes!

Introducing Quicken® Version 2—absolutely the fastest, easiest way to write checks, keep financial records, track income and expenses, budget, and manage your cash flow. It's ideal for business and personal use.

Now, Finish Financial Chores in Seconds.

Quicken completes your financial work 5 to 8 times faster than ever before:

- Analyze budget vs. actual expenses by month for 12 months: 4 seconds
- Look up a check you wrote 1000 checks ago: 1 second
- Write and print 20 checks and update all records: 3 minutes
- Compile an itemized list of tax deductions for the year: 3 seconds

How can it be so fast? Quicken uses indexed files and speed-optimized C and assembler code—the very latest in high-speed technology.

So Automatic, It Eliminates Work.

Quicken's fully automatic "macros" eliminate repetitious clerical work. Macros

Quicken remembers the bills you forget.

remember your bills, print your checks, and update all records automatically. All you do is sign the checks.

In fact, Quicken is so automatic it reminds you to pay your bills even if you forget to use it! Simply turn on your hard disk PC, and Quicken's pop-up Billminder™ appears when you need to pay bills.

No Need to Alter Your Bookkeeping Procedures.

Quicken is easy to use because it works just like your checkbook. There's no need to change your bookkeeping format or learn anything new—no accounting jargon, no "debits," no "credits."

Quicken also comes with comprehensive on-line help, a complete manual, and free technical support.

Here's what the critics say:

"I've never seen such an easy-to-use manual or software that's so simple to use." *Martin Blumenthal, in Cider Magazine*

"Extremely simple and fast!"

Esther Dyson, Industry Analyst

"Absolutely the best small accounting program made."

Bob Schuchart, Universal Press Syndicate

New Features for Business.

Quicken provides special sections for businesses covering payables, receivables, cash flow forecasting, payroll, petty cash control and job, client, and property bookkeeping.

If you're a doctor, property manager, accountant, consultant, or manage any type of small business, and you write checks, Quicken will save you time and money starting today.

■ NINE ATs COMPETE

merely all right, with reasonable response and feel. The keyboard isn't good enough to rave about, but it won't keep you from buying or using the machine, either. Like other Epson machines, the Equity II Plus has the keyboard plug on the left front side of the system unit, an improvement over the more common back-of-the-box location.

Epson usually supplies extensive documentation for its products, and the Equity II Plus is no exception. Three thick manuals cover the included MS-DOS 3.2, GW-BASIC, and a user guide and diagnostics. *SpeedStor* hard disk backup software also comes standard.

Epson produces its own BIOS, which passed all of our compatibility tests. The only feature on the whole machine that is different from the norm is the separate floppy and hard disk controller cards.

One of the best things about the Equity II Plus is its manufacturer. While many AT-class machines have to be shipped across the country for service or cared for by regional service centers, Epson is a standard brand name and its computers are generally sold through dealers who also supply support and service.

The Equity II Plus is neither the fastest nor the fanciest AT-class machine. Epson positions this unit as an all-purpose machine for end users who need middling 80286 power but don't want to give up a lot of desk space. If you need 12-MHz speed or nine slots, Epson is happy to sell you the Equity III Plus, but many users need look no further than the Equity II Plus. —Bruce Brown

HYUNDAI ELECTRONICS AMERICA

Hyundai Super-286C

Hyundai markets the Excel—its fast-selling import econocar—as the best possible combination of price and features. There are cheaper cars (if you want to call the Yugo a car), but Hyundai claims that you won't find a better deal when you consider all of the Excel's standard equipment.

The same philosophy seems to be behind Hyundai's economy computer, the Super-286C. With a base price of \$1,499, it's several hundred dollars more expensive than the cheapest AT compatibles.

The small footprint of the Hyundai Super-286C is achieved by slicing out two expansion slots and mounting the half-height hard disk vertically. The \$1,499 machine comes standard with an EGA Wonder Card and one parallel and two serial ports.

FACT FILE

Hyundai Super-286C
Hyundai Electronics America
4401 Great America Pkwy.
Santa Clara, CA 95054
(408) 980-7561

List Price: With 640K RAM, one 1.2MB 5¼-inch floppy disk drive, DOS 3.2, EGA Wonder Card, \$1,499; with second floppy disk drive, \$1,599; with 30MB hard disk, \$1,999; with two floppies and hard disk, \$2,099; 14-inch monochrome monitor, \$250, EGA monitor, \$308.

In Short: A small-footprint, 10-MHz AT compatible that offers good quality for a good price. Standard EGA Wonder card is an advantage, as are motherboard-mounted ports.

CIRCLE 678 ON READER SERVICE CARD

But the system comes in a nearly complete configuration, unlike other clones whose base prices don't include such "luxuries" as ports and a video card.

LOADED MOTHERBOARD The Super-286C's motherboard has two serial ports, a parallel port, and a floppy disk drive controller built in. That should take care of I/O needs for most users, and it frees the expansion slots that would normally be devoted to I/O and the floppy disk controller.

A clock/calendar is also standard equipment, and the Super-286C comes with ATI's EGA Wonder monitor card. EGA support is an unusual feature to find as standard equipment, and it's even more surprising to find a name-brand component sitting in the slot. The EGA Wonder is one of the most widely sold EGA cards, and it offers auto-switching to accommodate different monitors and software.

To complete your Super-286C system, you need only add a monitor and a hard disk to go with the standard 1.2MB 5¼-inch floppy disk drive. A 14-inch monochrome monitor adds \$250 to the price, while an EGA display will set you back \$308 over the base configuration price. A 30MB hard disk brings the system price (less monitor) to \$1,999.

Our tested configuration, with an amber monochrome monitor and a 30MB RLL Seagate hard disk, had a total price of \$2,249.

The Super-286C is a small-footprint system, measuring 6 by 15½ by 16¼ inches (HWD). The Hyundai's smaller width accommodates a total of six expansion slots (four 16-bit, two 8-bit)—two fewer than the IBM PC AT. That's a consideration, but the motherboard-based ports and floppy disk controller lessen the need for additional slots.

The system's hard disk is mounted on its side, next to the cage that encloses the floppy disk drive bays. This somewhat unusual arrangement allows for installation of a second half-height floppy disk drive under the standard floppy, if desired.

Hyundai supplies the Super-286C with a relatively puny 135-watt power supply. That should be big enough to handle most peripherals, but a fully loaded bus might make the power supply wheeze a bit. Several other machines in this price class offer power supplies in the 190- to 200-watt range.

The Super-286C runs at keyboard-selectable clock speeds of 8 or 10 MHz. The usual Ctrl-Alt-Plus or -Minus key sequence changes speeds. The ROM BIOS is by Award Software, a name seen more and more often on clone motherboards.

BENCHMARK RESULTS In processor benchmark testing, the system performed in the normal range for a 10-MHz machine, 1.2 to 1.3 times faster than a standard IBM PC AT. I encountered some fairly strange results, however, in running our hard disk BIOS Seek test. The drive generated too many errors for the results to be useful. On an alternate test, which uses DOS calls instead of BIOS calls, the drive clocked in at an access time of 69.79 milliseconds, which is serviceable if not speedy. The problem with the BIOS speed test may have been related to the drive's use of RLL technology. In any event, in actual practice the drive performed without incident.

A few other minor annoyances marred my impression of this basically sound machine. The power switch is rear mounted, which prevents accidental shut-down but makes for blind groping when a cold boot is in order. The supplied keyboard, which mimics the IBM Enhanced layout, has a mushy, imprecise feel. Typing on it was tolerable but hardly a pleasure.

The overall construction quality of the Super-286C seems quite high. Add-in cards fit snugly into the expansion slots, and the machine has an overall air of solidity that's missing from many compatibles.

Hyundai is one of the giants that are making Korea's presence felt worldwide. The size and reputation of the company are reassuring when you are plunking down over \$2,000 for a computer. Beyond that, the Super-286C has much to recommend it on its own merits. It's a very good system for the money. —Jonathan Matzkin

KAYPRO CORP.

Kaypro 286

Kaypro Corp. has made a point of not following in the paths of others. Its latest AT compatible may not be made with exactly the same recipe as most 286 machines, but it is certainly capable of grabbing a chunk of the pie. The Kaypro 286 is a 12-MHz machine that has a lot to offer, even though, like the Amdek System 286A, it strays from the norm. It's marked by a pretty hefty price tag, but it also offers a convenient upgrade path.

For \$2,995, the Kaypro 286 comes with 1MB RAM; one 1.2MB 5¼-inch floppy disk drive; a 40MB hard disk (Fujitsu, Miniscribe, or NEC); one parallel and one serial port; a combination floppy/hard disk controller; an IBM Enhanced-style Maxi-Switch keyboard; and an adequate 12-inch Samsung monochrome monitor and card. At first glance, the Kaypro 286 looks like an IBM PC-XT, but after closer inspection it's easy to see that looks aren't everything. The dimensions are the same, and four half-height drive bays are accessible from the front of the unit, but that's where the comparison ends.

INSIDE STORY To pop the hood off the system unit, you have to remove 11 screws. After looking at the inside of the 286, you can see that Kaypro has taken a somewhat different approach in organizing the internals of the machine. Most noticeable is the missing motherboard. Like the Amdek System 286A, the Kaypro 286 takes advantage of slot technology and places all the motherboard components on a full-length microprocessor board. This

Obviously, We Believe In

When it comes to portable PCs, we think that numbers should speak for themselves.

Perhaps that's why we have the largest number of high-powered, highly-portable PCs on the market today. All of which are IBM-compatible. All of which have industry-standard 3 1/2" disk drives, full function keyboards and a vast array of built-in ports. All squeezed into packages as easy to carry as a briefcase.

The T1000, for example, weighs a mere 6.4 pounds, yet boasts MS-DOS[®] in ROM, a 720KB 3 1/2" disk drive and an optional 768KB memory card which can be configured as

EMS memory or a battery-backed RAM disk.

Our T1200H, on the other hand, has the distinction of packing a 20MB hard disk, a backlit screen and 1MB of RAM into a tidy 11-pound package. We also make an economical dual floppy disk version known as the T1200F that weighs just under 10 pounds.

And thanks to rechargeable battery power, all three are ready to work wherever you go.

For even more computing power, the T3100/20 is one of the smallest PCs with an 80286

Strength In Numbers.

microprocessor and an easy-to-read gas plasma display. It gives you a wealth of power and a 20MB hard disk in a trim 15-pound package.

Our T3200 goes even further, with two IBM-compatible internal expansion slots, a 40MB hard disk, an EGA plasma display system and up to 4MB of memory. Still, it only weighs a scant 19 pounds.

Finally, there's our powerful T5100, which at less than 15 pounds has all the best features of our other portables, plus an 80386 microprocessor for unmatched versatility and speed. And for a limited time, your T5100 purchase entitles you to buy Paradox 386,* Borland's

powerful database software for only \$299 (which is nearly \$600 off the retail price).

And to all those numbers, we'd like to add one more: 1-800-457-7777. With it, you can find out even more about Toshiba's full line of computers and printers.

In fact, it's one call that ought to be your number one priority.

All Toshiba PCs are backed by the Exceptional Care program (no-cost enrollment required). IBM is a registered trademark of International Business Machines Corp. MS-DOS is a registered trademark of Microsoft Corp. Paradox is a registered trademark of Borland Corp.

TOSHIBA
Toshiba America Inc., Information Systems Division

Benchmark Tests: Low-Cost ATs

There were few surprises in the processor benchmark test results. All three 10-MHz machines performed similarly, as did five of the six 12-MHz machines. The Amdek System 286A, with its 12.5-MHz clock speed, was a step ahead of the pack.

The Star Industries AT 286, the Arche Rival 286, and the Hyundai Super-286C were equipped with hard disks that didn't perform nearly as well as the others did but helped to keep the price of their systems tested configurations down. In the case of the Star Industries machine, hard disk performance was compromised by an 8-bit hard disk controller. Conversely, the Core ATomizer sported an excellent 40MB drive that outperformed all the competition. Anything less from a company that is primarily a manufacturer of mass storage devices would have been a disappointment.

Performance Times

(Times given in seconds except where noted)

	NOP	80286 Instruction Mix	Floating-Point Calculation	Conventional Memory	File Access	DOS Disk Access (milliseconds)	BIOS Disk Seek (milliseconds)

N/A—Not applicable; test could not be completed without errors.

The **NOP** benchmark test is designed to measure raw clock speed and memory access time while minimizing differences in microprocessors and the effect of memory caching. This test executes almost nothing but NOP ("No Operation") machine code instructions in a big 128K loop.

The **80286 Instruction Mix** benchmark test measures the time it takes to execute a selected series of processor-intensive tasks. The test program uses 80286 instruction code. These instructions are a subset of the total processor instruction set.

The **Floating-Point Calculation** benchmark test measures processor speed by looping through a series of floating-point calculations, including multiplication, division, exponentiation, and logarithmic and trigonometric functions. The benchmark program uses the floating point library included with Microsoft C Compiler 4.0.

The **Conventional Memory** benchmark test allocates 256K of conventional memory and treats it as a series of 54-byte records. Then, 16,384 random records are read into and written from this memory. The result shown is the average of the read and write times.

The **File Access** benchmark test measures the time it takes to sequentially create and write a 256K data file using record lengths of 512 bytes and 4K. The test program then performs a series of operations: a sequential read of the same file, a random write, and a random read.

The **DOS Disk Access** benchmark test measures the time it takes to do a random sector read using DOS. DOS buffers are set at 3 and the interleave factor is left at the drive's default setting. This test adds DOS's overhead to the BIOS and hardware times. The test program performs the sector read 1,000 times within the DOS disk partition. The average result is shown in milliseconds.

The **BIOS Disk Seek** benchmark test measures the time it takes to do a random seek using the disk's ROM BIOS. The test result includes minimal software overhead and may not parallel the manufacturer's claimed average access time. The test program performs 1,000 seeks. The average result is shown in milliseconds.

The most affordable way
to build a skyscraper.

MultiSync Plus
For superior business
graphics, desktop
publishing and CAD.

Or construct a bridge. Or design a circuit. Or even create a pie chart. With the MultiSync® Plus, high resolution graphics are well within reach. When used with the graphics board that was designed for it—the MVA 1024 from NEC—it may well be the ultimate value for all your CAD and business graphics applications.

MultiSync Plus has a 15" diagonal flattened CRT and a tilt-swivel base to make you more comfortable. It works with boards for a variety of systems, from PC/XT/AT/386 (or 100% compatibles) to MAC II and PS/2. It automatically adjusts its scanning frequency from EGA to VGA, and on up to even higher standards with our MVA 1024 in AT/386 based systems.

Whether your plans are as big as a skyscraper or as small as a memory chip, MultiSync Plus makes the world of high resolution graphics more accessible. For literature or a dealer call

CIRCLE 135 ON READER SERVICE CARD

■ NINE ATs COMPETE

Like the Amdek System 286A, the Kaypro 286 features a backplane design, putting the 80286 processor on an expansion card and allowing for future upgrades. The \$2,995 machine includes a monochrome monitor and a 40MB hard disk.

approach may seem a little strange at first, but it makes upgrading your microprocessor a breeze.

There are nine expansion slots available: five 8-bit and four 16-bit. Three 8-bit and two 16-bit slots are left after the system board, video card, I/O card, and con-

troller are installed. The controller is a National Computer Ltd. combination controller and the BIOS is Phoenix, Version 3.07. A toggle switch and reset button are located on the back of the machine to either switch between 6 and 12 MHz or reset the computer.

FACT FILE

Kaypro 286

Kaypro Corp.
533 Stevens Ave.
Solana Beach, CA 92075
(800) 4-KAYPRO

List Price: With 1MB RAM, one 1.2MB 5¼-inch floppy disk drive, 40MB hard disk, 12-inch monochrome monitor and card, DOS 3.21, \$2,995. EGA monitor and card, \$575.

In Short: A 12-MHz machine with its motherboard components located on a full-length expansion card that leaves the possibility of an easy 386 upgrade wide open. The \$2,995 price tag seems high, but the system is complete and includes quite a pile of software.

CIRCLE 67 ON READER SERVICE CARD

The most unusual (and the most likable) feature of the Kaypro 286 is its separate microprocessor board. You have to like this feature after you discover how easy it is to upgrade your machine. Imagine just plugging a 386 microprocessor board into your 286 machine and instantly having 386 speed. With the Kaypro 286 it's possible and just over the horizon. As of this writing, Kaypro is in the process of developing a 386 upgrade board specifically for the 286 model. The upgrade board is expected sometime in the second quarter.

The Kaypro 286 performed all the benchmark tests with no problems and finished right up with the other 12-MHz machines tested. The 40MB hard disk had an average access time of 31 milliseconds. The only problem we had was getting the keyboard to work, but after switching to another Enhanced-style keyboard, we were up and running.

Bundled with the Kaypro 286 is a pile of software as tall as the computer. Besides MS-DOS 3.21, you also get *WordStar Professional*, Release 4.0; *WordFinder*; *SpeedStar*; and *GW-BASIC*. You'll also find several Kaypro utility programs that include a menu program that allows new users to set up menu choices for performing various DOS housekeeping tasks. Kaypro adds a nice touch by including two blank high-density floppy disks along with the many software programs.

Vision is the power of imagination. Seeing beyond the obvious. Being able to grasp and comprehend the obscure.

Introducing IZE™ to realize greater vision.

The information age has presented virtually every field, from research, education, and government to law, medicine, and business, with powerful resources. Resources that, unlike traditional data-based information, are textual. Lacking structure, this ever-growing textbase is most often unexplored, untapped power.

IZE is software designed to automatically discover the underlying structure of textbase resources and provide users the power to tap, explore, manage, and organize them.

The look of IZE is familiar: a table of contents presented in outline form. Yet the power of this elegant structure is considerable. And transparent in use.

Randomly entered reports, proposals, research abstracts, presentations, and correspondence. Ideas, lists, and notes. Documents you've

already created and those you'll generate in the future. Imported information from on-line services. Plus any other text capable of being read by an IBM® PC or compatible system, can now be easily viewed in a different light.

IZE will create a fundamental change in the way you use your computer. And the way you use information.

To gain mastery over new resources. To grasp. To comprehend. To see. To focus. To create. To fully utilize the product of the information age.

The promise of IZE is greater vision to share your vision with the rest of the world.

■ NINE ATs COMPETE

EDITOR'S CHOICE

- Amdek System 286A
- Arche Rival 286

There were no real disappointments in this group of nine AT compatibles; in fact, all are acceptable choices. Two machines stand out in the crowd. The Amdek System 286A is a system of superior quality with an obsolescence-proof processor-on-a-card design. You'll pay handsomely for this machine—\$3,595 for 1MB RAM, a 40MB hard disk, and no monitor—but you won't be disappointed.

Those with smaller budgets should investigate the Arche Rival 286. This machine came out of nowhere but will make a name for itself with its \$2,195 price tag and outstanding flat-screen monochrome monitor. The hard disk that Arche offers isn't good enough for the rest of the system, so order the base system, install your own favorite hard disk, and you'll have an AT compatible to brag about.

As you shop for your AT compatible, keep in mind some of our other

recent Editor's Choices. The CompuAdd Standard 286/10 was the best of the 21 inexpensive 286 machines that we evaluated in February (see "The Cheapest ATs Ever," PC Magazine, February 16, 1988). At \$1,529 including monochrome monitor and 20MB hard disk, it's a high-quality bargain. A 12-MHz model is also available. Looking back a little further, the AST Premium 286 has proven to be one of the most popular AT compatibles of all since it first came on the scene over a year ago. Many dealers offer deep discounts on the Premium 286. If you can find a good deal, give it strong consideration.

For PS/2 fans wondering how the IBM PS/2 Model 50 stacks up against all this competition, \$3,595 buys you a 10-MHz 80286-based machine with 1MB RAM, one 1.44MB 3 1/2-inch disk drive, an agonizingly slow 20MB hard disk, and no monitor.

Digital hard disk controller, a separate floppy disk controller, and a Key Tronic Enhanced-style keyboard. There are eight expansion slots available—two 8-bit and six 16-bit—and five half-height drive bays. The power supply is a 200-watt Astec with five device connectors.

A convenient turbo switch on the front of the unit is used to toggle the AT 286 between 8 and 10 MHz (with one wait state), and a reset switch performs a cold boot. The Star comes with the Award 286 Modular BIOS, Version 3.01, but you can specify a Phoenix BIOS if you want one. The Key Tronic keyboard has a snappy feel to it, very much like the IBM Enhanced-style keyboards.

The configuration tested had a monochrome monitor and a 30MB Seagate ST-238 hard disk with DOS 3.21 installed.

The total price was \$1,273. It performed the processor benchmark tests flawlessly.

In hard disk testing, the AT 286 turned in extremely disappointing results. The disk's 68-millisecond access time was unfathomably slow until the problem was spotted. The Everex hard disk controller in the system (the floppy disk controller is separate) had an 8-bit rather than a 16-bit interface, resulting in a tremendous data traffic jam that slowed the disk to a crawl.

EASY TO RUN The AT 286 is easy to set up and use and can be run right out of the box. If you change the configuration and have to run setup, you'll have no problem because the setup is built into the ROM BIOS (this feature is available only with Award BIOS, Version 3.01).

The documentation consists of one 60-

page manual that covers assembly of the AT 286, the basic DOS commands, the different hardware components of the system, and problem troubleshooting. Overall, the manual is quite informative and provides a very thorough overview of the system in understandable layman's terms. New users will probably want to keep this manual around as a handy quick reference. DOS doesn't come with the AT 286, but you can order it separately for \$79. Star does include the popular shareware word processing program, *PC Write*, with each AT 286 unit.

■ **Star Industries packs many quality components into the AT 286 for an uncommonly low price.**

Surprisingly, Star Industries packs many quality components into the AT 286 system for an uncommonly low price. The use of name-brand components like Western Digital, Astec, Key Tronic, and Intel (DRAM) probably accounts for the fact that the AT 286 has an extremely low failure rate. If you do need customer support for the Star AT 286, it's free. The warranty for the AT 286 lasts 1 year, and any faulty parts are replaced free of charge for the first 30 days. And if a Star AT 286 has to be returned, Star Industries pays for the shipping.

BANG FOR THE BUCK The Star Industries AT 286 is a quality machine with lots of bang for the buck. Although it isn't the fastest 10-MHz machine available, it's certainly one of the least expensive. But if Star Industries sacrifices performance to keep the price down, as seems to be the case with the 8-bit hard disk controller, it should change its strategy. The quality of the Star Industries AT 286 and its compatibility make it a very attractive choice for cost-conscious buyers, but in today's marketplace no one wants to (and no one needs to) settle for less-than-optimal performance. —Greg Alwang

How we made the most powerful integrated software a whole lot easier to use.

Yes. There are ways to take something that's very powerful and make it easier to use.

Actually, with Symphony® 2.0, not only is this latest version of the world's most popular integrated program easier to use, but it's also more powerful than ever. So it can keep up with you as your capabilities grow.

For starters, since there's no copy protection, you can get Symphony up and running with much quicker and easier installation.

Once up and running, bingo, you have instant access to five key business functions: spreadsheet, word processing, database, graphics and communications. So you can prepare budgets, write memos, create inventory lists without having to go through the hassle of changing programs.

But Symphony is really more than five separate programs. Because, unlike other integrated packages, Symphony lets you dynamically integrate functions. For example, when you change spreadsheet data, your graph of that data and your memo containing the same

numbers automatically reflect the changes. So you get greater efficiency, and you're able to work faster too.

Plus, the Symphony spreadsheet is the fastest and most powerful spreadsheet available in integrated software, based on Lotus® 1-2-3®, the industry-standard spreadsheet technology.

We could go on about the many features of Symphony 2.0—how its macros let you automate complex or repetitive tasks and create customized applications. How the word processor now has a spelling checker and text outliner. And how database and communications have been improved.

The bottom line is that Symphony is one high performance package that's made to be opened up.

Lotus Symphony 2.0

Hassle

free.

With a backup system from Irwin, you won't have to shuffle floppies all day just to protect your data.

Because our tape drives store up to 64 megabytes on a single minicartridge.

In a fraction of the time you'd spend making floppy backups.

Irwin's EzTape® software makes it hassle-free. Instead of complicated commands and procedures, it has Automatic Backup that you can set and forget. To store data automatically, every night, every weekend — whenever you want.

There's even On-Line Help for fast answers without burying yourself in a manual.

Our drives fit every popular personal computer and our space-saving internal drives fit right into your floppy disk slot.

An Irwin system works with all the popular networks, and just one of our tape drives can handle every computer on your LAN.

And our patented AccuTrak™ precision tracking technology allows you to transfer data from a PC to a PS/2 to a Mac.

That's a promise no other system makes, because no other system can.

Which may explain why more people buy our minicartridge systems than all others combined.

To learn more, call 1-800-BACKUP1 for your nearest Irwin dealer.

He'll demonstrate with convincing proof how easy it is to save your data.

And your peace of mind.

ATomizer 286 and 386 Performance Solutions.

CORE's ATomizer 286/12 and 386/20-based PCs offer high-performance solutions to today's complex applications and operating environments.

High-Performance Internals.

Both ATomizer 286/12 and 386/20 are equipped with a high-performance controller and up to two CORE internal drives.

They can be configured with a range of ST-506 drives, from 30 to 144MB or ESDI drives, from 40 to 760MB. Combine access times as low as 10ms with CORE's disk caching system (over 4,000KB/sec.) for unsurpassed performance.

Backup. The ATomizer can be configured with powerful backup systems: CORE/ast for diskette, winner of PC Magazine's Editor's Choice for two consecutive years, and COREtape, from 40 to 250MB.

Network File Servers.

Novell Inc. has certified CORE's HC Series drives and controllers for use with NetWare version 2.1. Up to 3 gigabytes of storage may be configured.

ATomizer 286 and 386 PCs also support other major LANs, including IBM Token Ring, 3Com and PC Net.

COREpower your LAN, CAD or desktop publishing system. Contact your nearest dealer or CORE representative today.

SCIENTIFIC WORD PROCESSORS: FORMULAS FOR SUCCESS

No longer needlessly complicated and cumbersome, today's scientific word processors simplify the task of integrating text and technical character sets.

Those who use scientific and technical word-processors are, to echo the old saw about the rich, just like you and me—except they ask a lot more of their WP programs.

The scientific-technical WP arena is, in a very real sense, just an extension of standard, full-featured word processing requirements.

However, it's important to remember that there's sci-tech, and then there's *sci-tech*.

Many of the requirements of those who prepare less-technical scientific papers and manuscripts can be met very well by one of the powerful word-processing packages we looked at in our roundup of word processors in the February 29, 1988, issue.

Microsoft Word and *Nota Bene*, particularly, have become popular with academics—and not only those in the humanities and soft sciences. Both programs manage footnotes superbly, a hallmark of technical typescript. Both have nifty internal boilerplate features, so that if you tire of typing a long, complex, or simply uncommon word or term used frequently in the paper—say, *riboflavin*, *hymenopterous*, or *acetylsalicylic acid*—you can use a keyboard-macro shortcut to insert that word or phrase.

Both programs (and others reviewed in that issue) also handle long manuscripts very well—a relatively recent development in PC-based word processors.

Old hands at PCs—who've lost a chapter or two in their time to the vagaries of power failures, hard disk crashes, and those mysterious gremlins who creep into our offices at night to perform unspeakable and untraceable acts on our computers—may still prefer to

■ SCIENTIFIC WORD PROCESSORS

save longer works in single-chapter files. But the convenience of managing a several-hundred-word manuscript in one large file is undeniable—and, now, maybe even sensible.

BEYOND WORDS For many scientists, engineers, and others whose words pass through a PC en route to publication, complex equations are at the heart of their work. And getting those equations onto the screen, onto the disk, and eventually onto paper is a major stumbling block with most PC word-processing software.

With many programs you enter the IBM extended character set symbols by holding down the Alt key while typing the character's three-digit ASCII code on the PC's numeric keypad. But it's not just getting those delta and pi symbols into the work one by one that counts. It's combining them in multiline mathematical expressions, or as elements of chemical formulas, that's the trick. And this brings most PC word processors—and those who use them—to their knees.

The problem of getting complex numerical expressions into the computer, then getting something approaching typeset results out the other end of the system, was addressed in the 1970s by Professor Donald Knuth at Stanford University.

Knuth developed *TEX*—pronounced “tech” by knowledgeable users, “tecchhh” (as in “blecchhh”) by the true cognoscenti—not as a sneer but to match the correct pronunciation of the Greek characters from which its name is drawn. *TEX* is essentially a formatter that accepts what look like ordinary (if confusing) ASCII files and drives output devices to produce good-looking and intelligible results on paper.

TEX has a set of keyboard entry conventions that at first seem merely illogical but soon become really infuriating; however, they can eventually be memorized and used to represent the ups and downs of superscripts, subscripts, functions, and so on—all to produce those complex mathematical expressions on paper.

DIFFICULTY IS PRESERVED To say that *TEX* takes a little effort to learn is like saying that with a little effort you could build your own full-scale, working Chal-

lenger spacecraft and run your own space shuttle program.

Over the past 10 years—during which Knuth's system was widely adopted in universities and research institutions—*TEX* has become, in effect, the Departmental Secretaries' Full-Employment Act. Thousands of secretaries and typists in physics, chemistry, engineering, and other technical departments across the world owe *TEX* thanks: their employers cannot let them go, cutbacks or not, because no one else in the department understands *TEX* well enough to get their papers out if their secretaries were to leave.

MicroTEX, developed by David Fuchs and published in 1985 by Addison-Wesley, brings the glory of *TEX* to the PC. A full implementation of the Knuth standard, *MicroTEX* lets users who know *TEX* make a rapid transition to a much less expensive, much more appropriately scaled computer and laser printer combination than that provided by the departmental minis and institution-wide mainframes often used for scientific or technical word processing. It also offers a rich set of challenges (chuckle) to the newcomer.

AUTHORS AND WPS The complexities of *TEX*, and the cult of those who have learned if not quite mastered it, illustrates one of the problems fundamental to most scientific and technical word-processing tools until very recently: they were often too complicated for the authors themselves to use.

It's not that a Ph.D. in astrophysics couldn't learn them so much as that he shouldn't have to. Mastering a word processing program is a reasonable and necessary qualification for writing in the scientific and technical domains today. But mastering a needlessly complicated program just to get words and figures down on paper is poor use of a technical person's time.

From running labs to teaching to speaking at colloquiums to writing grant proposals to selling research programs to administering or managing to maybe even finding a few minutes to think about what he is trying to do . . . well, the life of a respected technical professional has few spare moments.

This means, too often, relying on others

to get fragments of papers and other sci-tech documents into the computer, then tidying them up. Which makes for bad papers and worse science. Which has led to the appearance of good alternatives.

THE LOTUS PRESCRIPTION *Lotus Manuscript*, for example, though in fact a good choice for many kinds of large, structured manuscripts, had been unabashedly positioned by Lotus as a sci-tech word processor suitable for an author's own use. Now Lotus will be marketing Version 2.0 of *Manuscript*, which we looked at in its beta release, as a general-purpose word processor.

Manuscript is a smart, capable, and civilized system, perfectly usable by the authors of sci-tech papers themselves (and not only by those who once “typed” their work) for text entry. It uses a set of equation-entry conventions similar to but more logical and easier to learn than those of *TEX*.

Better, it lets you start with a simple outline, expand that outline into a detailed, highly structured schema, and then gradually expand sections of that outline into a full-fledged manuscript. Because sections can be selectively collapsed to their headlines, you can keep “open” only the portion you are writing at the moment, while still seeing how that portion fits into the overall outline.

Manuscript also allows easy entry of tabular material and lets you draw rules, or lines, around and through those tables for more-attractive, more-readable results. And *Manuscript* can enfold graphs and charts from Lotus's own 1-2-3, *Freelance Plus*, and *Graphwriter II* programs into its text, as well as compatible graphics files from other vendors' programs.

Manuscript is a good example of how much more PC-like scientific and technical word processing has become over the past 2 or 3 years.

Which is not to say that there aren't other good choices.

TWO ROUTES TO WP A longtime favorite, *T³* (known by its friends as “tee-cubed”) has more little quirks than the U.S. Tax Code. It does its job very well, however, and in the process provides a very good on-screen display of the formu-

las you're entering. It's especially good for chemists who must reproduce chemical formulas on paper.

Comparing *Manuscript* and *T³* is illuminating because they represent two very different but very interesting approaches to meeting the needs of the scientific-technical word processing user.

Manuscript appears to be strictly character-oriented in text entry mode. Using color, you'll get a few clues indicating boldface or italic type, but the program is designed for rapid text entry and editing. Indeed, its text-handling speed approaches that of *XyWrite* and Version 4.0 of *Microsoft Word*, two of the fastest programs examined in our previous look at general-purpose word processing programs.

But if you try to see how your finished pages will look by slipping into *Manuscript's* page-preview mode, you're in for a surprise: you'll discover that the program isn't character-oriented after all. On a graphics monitor you can slog through an incredibly slow page-by-page visual inspection of how the finished pages will look. Text is "greeked" (or simulated, with illegible squiggles), but if you wish you can blow up sections of the text to confirm (in simple stroke-font letters and

numbers) that complex formulas have been entered properly.

T³, by contrast, stays in graphics mode throughout the writing and editing process. Boldface, italic, underlining and strikethrough (and combinations of the above), as well as complicated multiline formulas, are shown on-screen as you work.

You pay a price, however, for that display: *T³* is much slower than *Manuscript* or the faster general-purpose word processing programs are at text entry and editing maneuvers.

NO MORE INDIA INK A very large percentage of scientific and technical papers, proposals, and manuscripts are still written by hand or typed very roughly on a typewriter or PC, then finally retyped by secretaries who leave blank spaces for symbols and complicated equations. Later, these symbols and equations are carefully inked in with a pen. Duplicate copies are made on a photocopier.

That's a shame—especially when the text of those papers originates on a PC running word processing software. Today, PC word processors are available that make text entry and editing fast and easy,

allow authors to compose technical matter and formulas directly from the keyboard, and can insert graphs, illustrations, and even screened photos of lab apparatus or of the projects and phenomena described in the text.

As we see these dramatically improved PC-based word processing tools moving onto the PCs of scientists, engineers, and other technical personnel, with perhaps only a final cleanup and printout reserved for secretaries (who may, for example, have access to a fast laser printer), we're likely to see far fewer inked-in papers delivered at conferences and submitted to journals.

Those papers—and their mistakes, illegible numbers, and odd-looking symbols—won't be missed.—**Jim Seymour**

Alexander

Word processors gain popularity by coupling power with ease of use. Similarly, programs that offer power but are not easy to use often fall by the wayside. *Alexander*, from Design Enterprises of San Francisco, is a \$245 personal word processor that has many useful features for scientists, mathematicians, composers, and anyone wanting to display foreign-language characters, but the way the features are implemented makes the program very difficult to use.

Written in compiled BASIC, *Alexander* will conquer you before you conquer

FACT FILE

List Price: \$245

Requires: 256K RAM, one disk drive, DOS 2.0 or later.

In Short: A difficult, poorly implemented word processor that requires a keydisk. You can display mathematical equations and chemical symbols as well as music charts, but you wouldn't want to. Not copy protected.

CIRCLE #43 ON READER SERVICE CARD

SEEKING THE RIGHT FORMULA

Broad character selection and flexible layout options are top priorities when choosing a scientific word processor. Here's how several programs present these features.

Alexander lets you assemble mathematical or scientific equations on-screen. To create any additional symbols you require, you can use Alexander's character-generation program, which also allows you to remap the keyboard or mask unused letter keys.

For editing text that includes formulas, **ChiWriter's** synchronized mode ensures that subscripted characters shift their position along with the rest of a formula. Here the letter m is added to the text, with the results shown in both modes.

The Egg keeps each equation on one line wherever possible and allows up to 17 levels in a single equation. The program's fonts contain an extensive variety of technical symbols; any other symbols may be created using a utility that comes with the software.

The EXP display, completely WYSIWYG, shows on its status line the mnemonics that produced the bracketed expression in the denominator of equation 1. To produce equation 2, more elements were added to equation 1.

■ SCIENTIFIC WORD PROCESSORS

("Seeking the Right Formula" continued)

Once you open a file in **Total Word**, you can access more than 400 scientific characters by calling up one of nine special on-screen keyboards. Often-used equations or the process of drawing compounds can be automated with macros.

WordMarc Composer has three technical character sets available: Greek, chemical, and DecTech. In addition, the conventional English alphabet can be modified with a few keystrokes to reflect European punctuation.

it. The installation process makes you think that you can install it to and run it from a hard disk, but you quickly discover that no matter where you run it from, it requires a keydisk in drive A:. The first thing *Alexander* dislodges is your CONFIG.SYS file and, if you're not careful, your AUTOEXEC.BAT file, too.

Alexander works with a monochrome, CGA, or HerculesPlus video board. Although the screen resolution on a monochrome monitor is adequate for text display, you'll need a CGA monitor in order to see any of the extended ASCII characters. But although *Alexander* requires a CGA, it can't work in color—all you get is high-intensity white—and unfortunately, it won't recognize an EGA or VGA card.

Alexander is menu driven and has lightpen and mouse drivers to make choosing selections easier. The menus get to be intrusive because you have to use them to get anywhere.

FOUR MODULES *Alexander* has four modules: basic word processing, editing, printing, and a control program. The basic word-processing module is for creating documents containing up to 18 pages of double-spaced type. The editing program, which handles larger documents, has a

file-chaining selection that lets you link files together, giving you the illusion of one document.

You can print most small documents (no longer than 18 pages) directly from the word processing and editing menus, but for larger jobs you have to go to the printing program. The control program takes care of the default values and the printer controls.

In addition, a character-generation program lets you create your own display characters, remap the keyboard, or mask unused letter keys. *Alexander* even has a typesetting module.

When you start the basic word processor, *Alexander* uses the standard defaults set out by the control program: line length is 65 characters, and tabs are set at every five stops. Line length can vary from 5 to 255 characters. *Alexander* saves to files and reads them in a text format that includes any special formatting codes. It can also read and write ASCII files directly.

Text formatting is shown on-screen with embedded characters identifying bold, underline, and super- and subscripts, among others. During editing you can do block moves, copy, delete, and search and replace. When you are in text-editing mode, *Alexander* changes the cursor from

an unblinking underline character to a disconcerting, fluttering rectangle.

ALTERNATE CHARACTER SETS

Word processing in another language is possible with *Alexander*, but not easy. You can remap the keyboard, no small task in itself, and write a glossary help screen to show you which keys have been changed; this screen replaces *Alexander*'s regular help display. None of these are simple operations. In order to use any special characters you first have to load the word processor, then load the special characters, return through the menus to load the glossary phrases, and, finally, you can begin typing.

Graphics character sets are available for music composition, mathematical and scientific equations, molecular charts, and electronic schematics. Cyrillic, Hebrew, Greek, and accents for most European languages are available, too. You can buy key decals in Cyrillic, Hebrew, and Greek, and if you type in Hebrew, it is possible to enter characters from right to left.

Multiline equations are done by first entering "graph paper" on the screen and then doing a character-by-character entry to build models that use more than one line. Music composition is entered in mu-

Fontware for
word processing.
It won't make you
a great writer.
But you'll have
a face like one.

Bitstream Fontware now works with WordPerfect 5.0 and Lotus Manuscript 2.0. So no matter what kind of writing you do, you can print it with the kind of typefaces people remember.

They're the same revolutionary typefonts now changing the face of MS-DOS desktop publishing. Which means you'll be changing the faces on your letters, reports and proposals with the finest professional typefaces anywhere. Dozens of faces that look better and read easier. That convey your thoughts and your image more clearly. And that reproduce perfectly, in nearly any size, on virtually any Hewlett Packard, compatible or PostScript PDL laser printer.

See your dealer today. Or call us at 1-800-522-3668 (617-497-7512 in Massachusetts). Get the simple facts about choosing and using Fontware to print everything you write. Because if you want them to remember your words, it helps to have a face they can't forget.

■ SCIENTIFIC WORD PROCESSORS

sic charts that *Alexander* conveniently paints to the screen. When you're in edit mode, you enter the notes, sharps, flats, and so on.

Alexander lets you do just about anything you want, but not easily. The package's shortcomings include its use of a keydisk and its repetitive, intrusive menus. There is at least one similarity between *Alexander* the word processor and *Alexander* the Great: it would not be worthwhile to tangle with either of them.

—Patrick Nicholas

ChiWriter

ChiWriter, from Horstmann Software Design Corp., is a scientific word processor that makes the processes of including mathematical symbols and line drawings within text and generating different fonts a snap. Editing formulas and equations is equally simple.

ChiWriter costs \$79.95 for a base configuration that includes fonts for mathematical symbols, CGA compatibility, and printer drivers for 9-pin dot matrix printers. You'll have to spend an additional \$24.95 for video drivers if you want Hercules, EGA, and VGA compatibility. Drivers for Hewlett-Packard LaserJet and PostScript printers cost \$59.95, and those for other dot matrix printers cost \$24.95.

Fonts for chemistry symbols cost an additional \$49.95.

ChiWriter can be installed on a single-floppy-disk-drive system with 256K RAM. A dual-floppy or hard disk system and 512K RAM are recommended for large word-processing jobs, however. The program does not come with a spelling checker or thesaurus. Horstmann Software reports that Version 3.0 of *ChiWriter* will sport a spelling checker and will also support PostScript printers.

SELECTING FONTS The program's function keys hold the secret to selecting fonts. Up to 20 fonts (italic, bold, math, line-drawing, Greek, Standard English, and others) are assigned to keys F1 through F10 and Shift-F1 through Shift-F10. Switching from one font to another is just a matter of selecting the appropriate function key to use.

The default font is Standard English, located at F1. To change from Standard English to the "small" font (an alphanumeric font suitable for sub- and superscripts), for example, you merely press F2 at the appropriate spot in your text. Press F2 once, and only the next character will be "small"; all characters thereafter will be printed in Standard English. Press F2 twice, and the "small" font remains active. And if you press a font-change key followed by Alt-H, *ChiWriter* will display a keyboard chart that tells you which key encodes which symbol.

When you activate a function key, the symbols appear on the screen in the selected font. With the exception of proportional spacing, *ChiWriter* offers WYSIWYG word processing.

The *ChiWriter* screen has four information lines. Across the top of the screen are the tab-ruler and mode line (which identify tab locations, the selected font, and the insert, spacing, and synchronization modes). Across the bottom of the screen are two rows of information: one a command line, the other a brief description of the selected command. You can hide this bottom portion if you wish to display more lines of text on-screen.

You issue editing commands either through the menu at the screen bottom or through Ctrl-key or Alt-key combinations. Marking text, moving text, wrapping

words, selecting tabs, and searching both forward and backward are only a few of the commands that you can select using this method.

GENERATING SYMBOLS With *ChiWriter*, generating math and scientific symbols is a breeze. There are two math fonts and four scientific fonts that will give you just about any symbol you'll need. You can create special symbols by mixing the symbols or line-drawing fonts with the math fonts. Moreover, *ChiWriter's* Font Designer gives you added control over special symbols and characters, allowing you to edit two fonts at the same time or create a new symbol by cutting and pasting, painting, changing the width of the characters, or overlaying the character boxes of two edited fonts.

ChiWriter also makes it easy to write and edit formulas and equations. To obtain a sub- or superscript, you must employ a two-key command; *ChiWriter* moves the next character up or down one-half line space into the sub- or superscript row. Since symbols are shown correctly on the screen, errors are easy to spot.

ChiWriter shines in its edit mode, because it lets you control the spacing after inserting or deleting text. When inserting a character into an equation that includes sub- or superscripts, for example, you first press the synchronization toggle key (* on the numeric keypad) to switch into synchronization mode. In this mode, the sub- or superscript character moves aside—in its proper place beside the character preceding it—to accommodate the insertion. Otherwise the sub- or superscript would end up, respectively, beneath or above the character it was meant to follow.

On the downside, *ChiWriter* will not calculate the formulas that you enter. Lines cannot be longer than 80 characters. Footnotes, headers, footers, and endnotes are available, but footnotes cannot run across two pages.

All in all, *ChiWriter* is easy to use and provides WYSIWYG multisymbol capability that you won't find in many more-expensive word processors. The program is an excellent secondary word processor for users whose documents require specialized symbols and line drawings.

—Heeth Clark

Circle 642 on Reader Service Card

ANNOUNCING RollCall

the "instant access" address system that puts your old card file in its place.

Does this situation sound familiar? You need to call a temporary service right away. So, you turn to your address file and flip through the Ts for "temporary." Not there. How about the Ss for "services" ... the Ws for Willi B. Quick Temporary Service ... the Qs? Maybe somebody "borrowed" the card.

Now RollCall™ gives you instant access to the names, addresses, and phone numbers you need. When you put this system on your IBM® PC (or compatible), you'll have the important people in your life at your fingertips much faster than you can say Willi B. Quick.

Look at these RollCall features:

EASY-TO-LEARN: Learning RollCall is a breeze. Look at the instructions once ... and you're an expert.

EASY-TO-USE: RollCall resides in your computer's memory, and you can pop it up instantly—even when you're running another program. RollCall eliminates the chore of writing and maintaining information on paper. And, you can "jot down" any comments you want to remember about each person, so you still get the flexibility of a manual file.

FAST: Three seconds or less. That's all it takes to get the name, address, and telephone number you need.

VERSATILE: Whether you need to keep track of 50 names or 50,000, RollCall allows you to locate them by name, affiliation, and even your own

designation. You can use it while you're writing a letter with your word processing program—RollCall will automatically insert the person's name and address right into the letter. Or use it to print envelopes and mailing labels. You can even print a directory to take with you on the road.

A GREAT BUY: RollCall costs only \$49.95. Amazing when you consider that we include a 3-1/2" diskette in addition to a 5-1/4" diskette, so you can conveniently put RollCall on any system. And we offer you TOLL-FREE hotline support *absolutely free of charge*.

ROLLCALL is for YOU! Perfect for office or personal use ... for large corporations or small businesses ... for salespeople ... for executives ... for secretaries ... for clubs and associations. RollCall is for anyone and everyone who needs to organize and use a list of names and numbers!

THE ROLLCALL GUARANTEE: Don't wonder whether or not RollCall will make your life easier. Try it! If you're not satisfied, then we'll take it back within 30 days and refund your money. To order now, call TOLL-FREE today:

1-800-888-DOIT.

(That's 1-800-888-3648. In the Washington, D.C. Metro Area, call 264-8900.)

Need RollCall immediately? Ask about next day and 2nd day delivery.

With IRMAremote, you can talk to your mainframe

Whether you're on the road in Why, Arizona or opening a remote branch office in Chicago, Illinois, you and your personal computer can be as close to mainframe information as the nearest telephone.

Introducing IRMAremote™ from DCA.

IRMAremote offers reliable, inexpensive and accurate access to your mainframe no matter where

you are. That means downloading files, electronic mail, data extraction and data entry—everything, in fact, that IRMA™ offers. And that includes supporting all of the mainframe file transfer software from DCA and IBM® your company has invested so much in.

What's more, it doesn't matter what kind of protocol your network runs on. Right now, there are

DCA is a registered trademark and IRMA and IRMAremote are trademarks of Digital Communications Associates, Inc. IBM is a registered trademark of International Business Machines Corporation.

from places once considered out of the question.

IRMAremote products for both SNA and BSC. Soon, there'll be a third for X.25. And if you use modems with the Hayes® AutoSync feature, all you have to buy is our IRMAremote software.

Perhaps most importantly, IRMAremote is made by DCA, the company that has set the standard in reliable micro-to-mainframe communications. A fact

that your Data Communications Manager will really appreciate when you request an IRMAremote for yourself or your office.

Not only will a phone access your mainframe, it will also access all the information you need on our IRMAremote products. Dial toll-free, 1-800-241-IRMA, extension 518.

Today's managers
are expected to learn
word processing
in their spare time.

NEW VERSION 2.0

Fortunately, that's all it takes.

Can Professional Write significantly reduce the time and cost of your training and support? Call 1-408-848-4391, Operator #60 for a free trial disk.

Truth is, the best business people have the least spare time. So Professional Write 2.0 was designed to get them up and running immediately.

Professional Write 2.0 has all the features managers demand, and saves them the frustration of learning programs designed for full-time typists.

Our learning process speeds up the word process.

Anyone can learn Professional Write in a couple of hours. The screen is as familiar as a piece of paper. Pull down menus and an on-line manual means there's nothing to memorize. Our follow-along tutorial is written in plain English, and our context-sensitive help is one of the best available.

It all ensures that your managers spend their time managing, instead of asking for help.

We're the most compatible with your secretaries.

We gave Professional Write the most extensive and direct connections with the other software standards in your office. No other program does it so easily. Professional Write has built-in compatibility with MultiMate™, WordPerfect™, Microsoft Word™, WordStar™, Wang™ PC, DCA, and ASCII. You can directly import Lotus 1-2-3™ worksheets without retyping; include a chart from Harvard Graphics when printing; and mail merge quickly with dBase III™ files.

We give your printers the perfect set-up.

Now using multiple fonts with an HP Laser Jet™, Apple LaserWriter™, PostScript™ or HP DeskJet™ is as simple as underlining. And printer support has never been easier, because Professional Write is pre-configured for quick installation.

We have a fast new way to find your documents.

You no longer have to spend your valuable time hunting down files. Our new *File-Finder* searches through the actual text of *all* your Professional Write files to find any words or phrase, and will call up the appropriate document. We'll also give you sorted lists of files, and the option to identify your files with summary descriptions.

There's more to our feature story.

We know what managers need from a word processor. That's why Professional Write offers speed keys, macros, and column-move. An integrated spelling checker,

We're quick to polish up your tongue.

thesaurus, on-screen calculator and address book are only a key-stroke away. We also support all the popular networks.

"At 20MHz this is the fastest
beast I've ever
had the pleasure to meet."

John C. Dvorak
Columnist, PC Magazine

IBM PS/2 Model 80 (20 MHz)	_____	3.52 MIPS
Compaq DeskPro 386/20	_____	4.59 MIPS
Everex Step 386/20	_____	4.91 MIPS

Power Meter MIPS Version 1.2. The Database Group.

"What am I doing
here?"

I guess I have a
reputation for
saying what's on my
mind. So when
the people at Everex
asked me to be in
their ad, I said it was
okay as long as they
let me have the floor.

The reason I like
their Step 386/20 is
simple. It's fast.
It is definitely the
fastest machine
that I've seen so far.

When they sent
the machine over, I
put it through
every benchmark
test I could find.
I finally gave up.
It was the highest
on all of them.

Give me the choice
and I'll use the fast-
est thing I can
get my hands on.
This happens to be it.

What can I say?
I like the beast.

ALPS ALQ224e

ALPS ALQ324e

ASK AND YOU

In PC printers, as in life, you can't always get what you want.

Unless, of course, you get an ALPS.

Take our new ALQ224e and ALQ324e, for instance. The "e" is for "enhanced," which is how these dot matrix printers differ from our original ALQ line. And the enhancements are all the result of customer suggestions.

You asked for a 24-pin printer that could run 9- and 18-pin software. So we gave the ALQe printers 24 pins, and the ability to emulate 9- and

18-pin printers. You asked for smoother paper handling, with no waste. So we added paper parking and a built-in, push/pull tractor feed. And you asked for greater type versatility. So we included two resident fonts.

Of course, you also get most everything else you'd ever want in a printer. Like crisp letter-quality output. Color. A top speed of 240 cps. Easy front-panel controls. Full compatibility with the leading PCs and software. Plus the ability to run five years without a breakdown.

SHALL RECEIVE.

There's even a choice of sizes. The compact ALQ224e is ideal for standard paper sizes and tight spots, while the wide-carriage ALQ324e can handle up to 16-inch-wide spreadsheets.

What's more, both printers come with a free ALPSmate software program, which gives you full control of your ALQe from your PC.

So ask your local ALPS dealer for a free ALQe demonstration. And if, for some reason, you find they're not exactly the type of printer you're looking for, call us at 800-828-ALPS.

Or, if you're in California, 800-257-7872.

And we'll be happy to build something else for you.

CIRCLE 242 ON READER SERVICE CARD

The Egg

Perhaps because it can be described as an object with a flawless exterior enclosing material with lots of potential, *The Egg* became The Peregrine Falcon Co.'s code name for its \$495 scientific word processor during development. For the most part, that appellation fits: *The Egg* is a fine tool for preparing scientific documents. What is not flawless, however, is the program's nonmath word-processing functions.

The Egg is easy to crack. Installation is a simple matter of copying files from one non-copy-protected disk. (*The Egg* works on floppy- and hard-disk systems.) An hour or so later, after having worked through the tutorial, you are ready to start preparing documents containing equations of varying complexity.

Fonts included with the program contain every important technical symbol (many in several sizes), including some basic chemistry forms. If you need some special symbol not in the fonts, you're free to create it with a utility within the program. (Additional and extensive chemistry fonts are available separately.)

The Egg easily created *PC Magazine's* sample test equations. Equations, however, cannot be rescaled. Vertical movements are in units of quarter-lines, while

horizontal movements can be adjusted to half-character widths. (A future program, *The Egg Bookmaker*, will offer the ability to make small adjustments in any direction and will provide kerning.)

LINE AND LEVEL From *The Egg's* perspective, an equation or technical expression is held on a single line. This line may have any of 17 levels, and you place your integers, Greek letters, vectors, fraction lines, braces, and brackets on this line at the appropriate level.

Some expressions may extend far above or below the baseline of the line, and *The Egg* does not automatically adjust the interline spacing; you will have to perform this fine-tuning yourself. A special reference symbol on the screen moves up and down to indicate your current position with respect to the true baseline.

The Egg comes with eight fonts, each of which is available in eight sizes, and each size of which is available in normal, bold, italic, and bold italic weights. Just about any scientific character you need can be found in one of the eight basic fonts, and extensive font charts help you to unearth the font containing the one you need.

At any time, two fonts are always on-line. All of the eight sizes of these two, plus the four weights, are always available as well. It is also easy to bring up other fonts.

But when it comes to reference material, information in *The Egg's* large, handsomely produced manual is not so easy to educe. The manual is in need of revamping, and some of the phrasing is, in fact, confusing and awkward. One unfortunate omission: you are never told how to start *The Egg*! What you expect to work, fortunately, does—at the DOS prompt, type "egg" followed by a carriage return.

Where the manual fails, the tutorial does its job and brings the new user up to speed in short order. (Peregrine Falcon was working on a new manual, which should now be available.)

PRINTED OUTPUT Not all printers are capable of producing the scientific-technical symbols that are *The Egg's* specialty. Only about half a dozen printer drivers come with the program, including the IBM Graphics Printer and Toshiba P1351 dot

matrix printers, the Diablo 630 daisy wheel printer, and the Hewlett-Packard LaserJet and Apple LaserWriter laser printers.

The Egg can also produce a disk file containing the PostScript instructions for preparing your manuscript. (Otherwise, there is no capability for preparing print files.)

For some users, being able to use a laser printer may not be an issue. In that case, Peregrine Falcon's *Three Minute Egg* will be of interest. In this essentially complete version of the real *Egg*, the ability to print on laser printers and design your own special characters has been removed. This marginally crippled version sells for \$225, less than half the price of its hard-boiled relative.

It is a disappointment that more-traditional word-processing tricks were not well integrated into *The Egg*. Efficient cursor movement and sophisticated formatting are not present. *The Egg* performed poorly on the PC Labs benchmark tests primarily because it had difficulty handling the large sample text file. You will do fine if you keep your *Egg* files reasonably short.

With this easy-to-learn WYSIWYG scientific program, you can create virtually any scientific expression you could want. But when it comes to nonscientific word processing tasks, you might find *The Egg* to be a bit runny. —Alan Hoenig

EXP

EXP, from Wadsworth & Brooks/Cole Advanced Books & Software, lets you put scientific or mathematical formulas in your documents and easily edit them later. The screen display is completely graphics oriented, so that what you see really is what you get.

You wouldn't purchase this \$150 program as an office word processor, but if you buy it for its technical features you can certainly use it for other tasks. It has all the basic features, including footnotes, headers and footers, columns, multiple windows, even macros.

EXP's display is acceptable on a CGA, but it's most impressive on a higher-resolution adapter like the EGA or Hercules Graphics Card. Naturally you need a

CIRCLE 640 ON READER SERVICE CARD

graphics printer to produce *EXP* documents. At present the software supports five varieties: the Epson MX-80, the Toshiba P-1351, the Epson LQ-1500, the Tandy DMP-2100, and the Hewlett-Packard LaserJet II.

WORKING IN BOXES The basic unit of *EXP* expressions is the *box*. Certain commands—Open, Matrix, Numerator, and others—open boxes; other commands, such as Bracket, Frame, Sqr (the square root symbol), and Close, close the box and may surround it in some way.

Once you have a box, you can connect other boxes to it. The Roof command puts a new box above the current one; Rug puts it below. You get several different choices for subscript and superscript placement, including preceding the box. Best of all, if you insert more text or symbols inside a box, the box grows to fit.

What goes in these boxes? *EXP* offers seven ASCII fonts and six symbol fonts. The latter include almost every scientific and mathematical symbol you could want, along with several Greek fonts and even a Russian alphabet. At present you can't edit the fonts or create new ones, but a mouse-driven font editor will soon be available.

To insert a symbol in the text, you call for it by name. For example, typing "phi beta kappa" on the command line will put

the appropriate Greek letters into the text. You can mix symbols with control codes on the command line, too. The command "sum roof infinity close rug \0x close" will print a summation from zero to infinity. This command means, "Create a summation character, put an infinity symbol on top of it, and put a zero under it."

If you frequently need that summation from zero to infinity, you might assign it to a keyboard macro. You call *EXP* keyboard macros with a special command key or by shifting to the macro keyboard, so any key can be a macro key. *EXP* macros are strictly recorded key sequences without conditional programming, but you can edit them with a utility program.

LIMITED WP FEATURES While *EXP* also boasts many basic features of office word processing, certain features that it might have are absent. A spelling checker, automatic hyphenation, and index generation, to name a few, are not present.

EXP is strictly command driven; there's not a single menu in the program. Also, it doesn't duplicate any DOS functions. If you need a file directory, you press the "DOS shell" key and type DIR. There's no on-line help; if you need to know something, you look it up in the manual or on the Quick Reference card. By leaving out certain amenities and concentrating on the technical features, the authors kept *EXP* small and sleek.

Devotees of Donald Knuth's *TEX* text formatting program will be thrilled to hear that *EXP*-to-*TEX* conversion is in the works. (The program is currently being tested and should appear later this year.) The most common criticism of *TEX* is that it lacks a WYSIWYG interface. *EXP* could give it one.

EXP makes few demands on your system. It will work on a 256K IBM PC with a single floppy disk drive. If you use your computer for many different purposes, or if you need to start working with a technical word processor right away, *EXP* is for you.—Neil J. Rubenking

PCTeX

PCTeX, from Personal TeX, is very different from other scientific word processors. For one thing, although it processes docu-

ments so they are ready for printing, it is not an editor. You can't write a document with it, move blocks of type around, or do a search-and-replace.

In a sense, *PCTeX* is a language and a compiler. You place *PCTeX* commands into a document prepared with the word processor of your choice, and the program will run the file so that it's ready to be printed. In this programmerlike way you get precise and powerful control over document formats—including typesetting features like ligatures and kerning. The \$499 program can also construct almost any mathematical formula or expression.

MAINFRAME ORIGINS Because *PCTeX* (pronounced "PC tech") is a language and has been ported down from the mainframe world, it's not easy to learn or use. It takes dedication and the programmer's sense of detail. This is evident from the very beginning. Installing the program and getting ready to run it can take some time. *PCTeX* comes in pieces: a main program, which actually includes several different sets of *TEX* macros; a document previewer; and a printer driver. Each piece has its own manual, and there is even a separate, over-250-page manual for *LaTeX*, one of the macro sets.

The *PCTeX* program itself resides on four disks. Installing this part of the full

List Price: \$499 (including previewer and laser printer driver).

Requires: 512K RAM (640K recommended), hard disk drive, DOS 2.0 or later.

In Short: A typesetting program rather than a word processor, *PCTeX* doesn't let you do interactive editing but affords you total control over formatting, especially of mathematical formulas and equations, once you master its complexities. *PCTeX* delivers superior-quality output and device-independent files. Not copy protected.

CIRCLE 639 ON READER SERVICE CARD

LARGE-DOCUMENT PROCESSING + EQUATIONS — HASSLES = LOTUS MANUSCRIPT

More than just a scientific word processor, this full-featured program's new release offers the best of both worlds.

Finally, a word processor with a powerful equation language that lets you formulate equations as if you were speaking them, instead of drawing them with pixel-based pickup sticks, and that packs enough power to be called a document publishing system. That's *Lotus Manuscript*, Version 2.0.

With a strong set of tools for creating large documents, the original *Manuscript* bridged the gap between traditional word-processing and full-featured desktop publishing. But its full equation language made the \$495 package especially appealing to scientists and tipped the balance toward scientific-technical applications.

The difference between *Manuscript*, Version 2.0, which we looked at in its beta release, and the original *Manuscript* is significant: Version 1.0 was a good scientific word processor; Version 2.0 competes feature for feature with the major corporate word processors. Version 1.0 hung together beautifully; at first glance, Version 2.0 borders on awesome.

Although you gain a lot with the new release of *Manuscript*, you don't give up anything in ease of formatting equations. You type $f(x) \Delta x = 0$, and *Manuscript* responds with a sculpted

$$f(x) \Delta x = 0$$

As you create an equation, you can size it, scale it, justify it, include it in a table of tables, and preview it on a full display screen. The equation becomes, in effect, a concise statement combining both format and content information. An equation editor makes reworking equations a snap.

Equation-handling prowess is only a minor part of *Manuscript's* many abilities.

Manuscript's skillful handling of ta-

bles of contents, indexes, references, and notes materials makes it a good choice for all types of report writing. Optimized for the sci-tech crowd, the program's document-handling tools are equally suited for the creation of any highly structured document.

WHISTLE WHILE YOU FORMAT

At the heart of *Manuscript* is a unique way of approaching document creation. Whether it's a cross-reference, a chart, a column of text or data, a table of contents, a footnote, an equation, a section heading, or a paragraph of text, *Manuscript* lets you format at the same time you compose. All documents are made of building blocks: text, blocks (which are units of text with similar attributes), columns (which are vertical blocks), and

sections. Each of these units can be created with a single keystroke and subsequently edited and formatted.

A well-integrated outliner is the backbone of the system. You create a detailed outline by promoting and demoting and collapsing and expanding. Taking the concept further, you can format the various levels of your outline. A series of format panels prompts you to make numerous decisions about the appearance of the printed page.

Much of *Manuscript's* grunt work is a one-time-only affair. Laser printers and downloadable fonts are controlled via a Global Typeface Setup panel. You create a table of up to 20 fonts for point-and-place insertion in a document. I tested the beta version of *Manuscript's* custom version of Bitstream fonts, the *Fontware Installation Kit for Lotus Manuscript* (\$95 from Bitstream), and found creating and editing custom fonts to be a well-integrated and easy-to-handle process.

QUILTING LARGE DOCUMENTS

Large documents typically don't live by text alone; they are a patchwork of all sorts of nontext material—and *Manuscript* can handle just about all of them. There's a built-in table maker that creates multiple columns as you specify column and gutter widths. A border layout tool lets you create a mock-up of how you want a block (or blocks) of text bordered. Together, the table maker and borders are infinitely superior to any combination of drawing tools and tabs I've ever had the misfortune to work with.

Graphics created using *Freelance Plus*, *Graphwriter*, *Lotus 1-2-3*, *Symphony*, as well as other packages can be inserted, scaled to size, and placed on the page by answering questions on a single pop-up panel. Scanned images from a variety of popular scanners can be insert-

 Lotus Development Corp.
 55 Cambridge Pkwy.
 Cambridge, MA 02142
 (800) 345-1043

(617) 577-8500
List Price: \$495; upgrade from Version 1.0, \$75.
Requires: 512K RAM (640K recommended), hard disk drive, graphics display card for print preview, DOS 2.0 or later.
In Short: This powerful document processor sports a table editor, equation formatting, hot links to spreadsheets, an integrated outliner and spelling checker, and a host of other valuable features. It tackles the job of creating large documents and simplifies the process of entering equations. Not copy protected.
CIRCLE 831 ON READER SERVICE CARD

ed with a single command, and *Manuscript* can accept PostScript files.

You'll be impressed with the live spreadsheet link into documents. You can first create a formatted document to house 1-2-3 data and then insert the worksheet (or range) on command.

A pop-up Marker menu rounds out the package's overwhelming supply of commands. Markers are *Manuscript*'s way of indicating places in the document where extraneous material belongs. There are markers for just about anything that isn't text. Orientation markers signal a change from landscape to portrait. Author, date, revision, and file-time markers insert those pieces of information into the document. A screen marker inserts a captured screen image (sized and scaled) into place. Markers even handle *Manuscript*'s conditional mail-merge.

At every turn *Manuscript* meets you with a feature. Two on-screen windows let you edit multiple documents. A series of page-layout panels customizes title pages, index pages, and others. You can create an elaborate series of special char-

acters, such as daggers and bullets, using specified keystroke sequences.

SEPARATE BUT EQUAL Most newer word processors tout the fact that they offer WYSIWYG representation. *Manuscript* is not a WYSIWYG word processor. But, it's designed in much the same way that many earlier word-processing programs were: with a text editor and a print formatter/previewer.

During text editing the display is used in text mode. To see a page layout, you use a graphics display monitor and *Manuscript*'s Print Preview.

Because *Manuscript* is not busy redrawing bit-mapped graphics screens each time you make a move, and because all of the extraneous document pieces are merely marked for inclusion at print time, the text-editing process is fast, even when you're working with large documents. You can preview the printed document to the screen and see a true page display, including graphics, equations, and fonts. You can get an overview of the layout with "greek" or zero in on

text, using *Manuscript*'s magnification window. You can even create full-screen previews of a single graphic or equation without previewing the entire document.

TOO TOUGH TO HANDLE? All powerful word processors have steep learning curves, but many users feel that *Manuscript*'s is the Mount Everest of learning curves. Actually, the initial philosophical hurdle of thinking in "blocks" is tough. Once you make the leap, the rest is perfectly sensible.

Sometimes *Manuscript*'s keystroke requirements save you time, but often you find yourself pressing more than your fair share of keys. Most edit command functions are assigned to the function and Alt-function key combinations. But since many of the keys can perform an action on a block, column, or section of text, you'll always need to specify the amount of text as well as the action.

Some of the more-common keystroke assignments are bizarre. For example, the Ins key is used to execute commands rather than to toggle between overstrike and insert modes. The Spacebar is the potpourri keystroke; when in doubt, hit it. It brings up the available submenus, toggles between yes and no prompts, and checks items on pop-up option lists, to name a few of its capabilities.

Is *Manuscript* simply too big and cumbersome to use for cranking out a simple letter? It depends on content. There are tools to track the author, comments, and revision numbers of a document much like those of any other corporate word processor. But if you're just typing ordinary text, you probably don't want *Manuscript*. On the other hand, if your letters include logos, signatures, tables, and a few boilerplate paragraphs, you might be pleased with *Manuscript*.

Products evolve strangely. Lotus Development Corp., a company known for corporate applications, has created a sui generis scientific-technical word processor. On closer inspection, the sci-tech crowd has an enviable product. *Manuscript*, Version 2.0, is bigger than the sci-tech market. —Robin Raskin

Lotus *Manuscript*'s Preview Page function gives you a "greeked" look at a page before printing. A page is shown to the left, with its upper portion blocked off for 2X magnification (up to 10X is permitted). Below: An equation can also be magnified, ungreeked, by using the Graphics Zoom function. This image can fill the entire screen.

$$C_{\mu}(M) = -e^2 T r \int \frac{d^4 k}{(2\pi)^4} \frac{1}{k-m+i\epsilon} \gamma^{\mu} \frac{1}{k-q-m-i\epsilon}$$

■ SCIENTIFIC WORD PROCESSORS

package is as simple as typing "install." While this transfers all the program files onto your hard disk, that's not the end. You need to create special format files. The manual guides you through two such procedures. Each takes only two commands and several minutes to accomplish, but it involves reading through 20 pages of documentation and can be confusing.

Next comes the *PCTeX* menu configuration. *PCTeX* can be run by typing commands at the DOS prompt, but Personal TeX has added a menu to make the program a bit more friendly. The menu has seven commands: Edit, Compose, View, Print, Typeset, MSDOS, and Quit. To configure the menu so that it carries out its functions properly, you have to copy the *PCTeX.CFG* file to your word processor or use the DOS editor *EDLIN* to change it. These changes can be fairly simple, or quite complex if you add options such as modified error handling or memory management. Finally, you install the preview program, which might necessitate changing the .BAT file and the printer driver, each supplied on one disk, and the Computer Modern fonts, which come on five or more disks (depending on your printer). When you finish, you will have one main directory, six second-level directories, and seven third-level directories; in the process, you will have used up 4 to 6MB of space on your hard disk.

A THICKET OF COMMANDS Your first and predominant usage of *PCTeX* happens outside its boundaries, in your word processing package. Because *PCTeX* is a typesetting program, you have to embed formatting and typesetting commands in your word processing documents. This involves using a bewildering thicket of curly braces, slashes, percent signs, superscript symbols, command words, and letters. For example, if you wanted to italicize the words "italic correction" in a sentence, you would type: `{\it italic correction/}`; if you wanted to underline those words as well, you would type: `{\u\it italic correction/}`.

Mathematical expressions are even more complex to type. The simple equation, $1+2=3$, would be entered as `$$1+2=3$`, which is straightforward. But a more complex formula like x divided

by $1+x$ over 2 would be written as: `$$\frac{x}{1+\frac{2}{x}}$`. And a formula involving large parentheses, with the square roots of several variables added together, then raised to the second power, would read: `$$\left(\sqrt{\frac{ab+(x+y)^2}{1}}\right)^2`.

Unfortunately, some of the basic formatting techniques, such as setting and changing margins or creating a table, aren't even in the *PCTeX* manual. To find them you would have to consult a textbook called *The TEXbook*, by Donald Knuth (Addison-Wesley Publishing Co.)

As it turns out, document margins are entered at the top of a file. The default setting is for 1-inch margins all around. If you wanted a top margin of $1\frac{1}{2}$ inches and a $1\frac{1}{2}$ -inch margin on each side, you would

■ *PCTeX* offers ample rewards; you can achieve incredible precision in formatting text.

type: `\voffset=1.5in \hoffset=1.5in \hsize=5.5in`. Then, if you wanted to set off a paragraph by narrowing its width (that is, increasing its margins by half an inch), you would type `\leftskip=.5in \rightskip=.5in` at the beginning of the paragraph. To create a table, you have to use the "halign" command, the pound sign, ampersands, and the `\cr` command in an eye-straining array.

VERSIONS AND VARIATIONS Obviously, formatting takes time and slows down document creation. There are approximately 900 command symbols, letters, and words in the *PCTeX* vocabulary. As if this weren't daunting enough, *PCTeX* comes in several varieties: plain, *LaTeX*, and *AMS-TeX*. Each of these versions of *TEX* expresses commands in a different way and adds more of them. There are also style files to learn—smaller sets of *TEX* macros designed for specific tasks. The *litr* style, for example, allows you to typeset business letters.

After a document has been written and edited, the *PCTeX* program takes over. First you have to "compose" the document. In essence, this step compiles the file from the language commands. It uses a batch-processing approach, so you have to wait for the whole document to be composed before you can view or print pages. The composed file is given a .DVI extension, which stands for "device independent."

By now it must be clear that this program is not for everyone. But despite its complexity and the time you will need to invest in learning it, *PCTeX* offers ample rewards. You can achieve incredible precision in formatting text, especially mathematical expressions.

Symbols in a formula can have superscripts stacked as high as you like; in fact, superscripts, subscripts, fractions, and binomial coefficients can all be nested in any order of complexity. You can generate large operators, such as a summation symbol or the integral sign, surrounded by limit symbols in different type styles. The program will also align formulas, produce matrices, thin the space between expressions in a formula, and more.

Since *PCTeX* is a typesetting program, it automatically takes care of *Kerning* (adjusting the space between letters) and will even insert *ligatures* (certain pairs of letters bound together tightly for optimal appearance). The many typesetting features and the precision formatting make for printed documents of typeset quality. I've never seen better-looking documents from a dot matrix printer—they look like professionally produced manuscripts or books.

PORTABILITY OF FILES Another important reward is the portability of the composed document files. The .DVI files can be used with mainframe, minicomputer, and PC systems. They can be printed by dot matrix and laser printers or by typesetting machines—without any significant difference in the final output.

Since *TEX* is a public-domain program, there are a lot of people developing additions and extensions. In fact, there are several other PC versions of *TEX*. One of these is Addison-Wesley's *MicroTEX*. Two other versions, *TurboTeX* and *CommonTex*, are shareware products. There is

■ SCIENTIFIC WORD PROCESSORS

also a *TEX* Users Group in Providence, Rhode Island.

Not your run-of-the-mill PC-based document processor, *PCTeX* is extremely powerful but proportionally hard to use. If you are a scientist or an academician who wants total control over the typesetting of a manuscript, then this is the program for you.—Henry Fersko-Weiss

PS

PS, from Scroll Systems, is a powerful scientific and technical writing tool. Originally written for the Victor 9000 before IBM introduced the PC, the \$395 program is actually a hybrid of Phoenix Computer Products' *Pmate* text editor and Scroll Systems' text-formatting and presentation facilities. Its impressive range of capabilities includes all the basic text-editing features you'll want, plus extensive macro, programming, and print-formatting features.

PS's ability to simplify the input and presentation of complex equations sets it apart from many other packages. Its Greek/math symbol set includes integrals, sums, plus/minus signs, and braces. The symbols are called up by using Alt- and Shift-key combinations. They can be edited, and they can all be represented on the screen in both text and graphics preview modes. You can also create your own font—important for those who use unusual notation in their documents.

In addition, *PS* offers you a choice of

keyboard configurations. Combining the Ctrl, Alt, and D, F, G, or Q keys will change your keyboard to Dvorak, French Azerty, German or back to Qwerty.

While you're learning the ins and outs of symbol placement, you can call up a representation of the keyboard you're using, which pops up across the bottom of the screen. Unfortunately, it disappears when you strike the next key. Becoming familiar with the various keyboards would be a lot easier if the program would display the keyboard diagram in a window until it's no longer needed.

FULL RANGE OF PRINTERS *PS* supports the full range of printer types: daisy wheel, dot matrix, laser, and graphics. Naturally, which print capabilities you get depend on the type of printer you use. On most dot matrix printers, *PS* supports the standard high- and low-order ASCII character sets, which is enough for most applications. Greek/math, italic, and script characters are supported on the Toshiba printers, the C. Itoh Prowriter 8510, and the NEC 8023.

But *PS*'s most impressive print capabilities are realized with the Hewlett-Packard LaserJet and the Imprint Technologies LightWriter. The LightWriter is available as a special package from Scroll Systems and includes a special interface card that must be installed in your PC.

Equations are entered in linear format in *PS*'s text mode, using the actual Greek and mathematical symbols. The convention is fairly easy to learn and is easily readable in text form once you get accustomed to it.

Subscripts and superscripts, important in most technical documents, are set up manually by embedding control characters in the text. There's no limit to the number of levels of super- and subscripting, but you have to plan for the correct placement on the page to avoid overprinting. Placement of super- and subscripted expressions in equation mode is automatic.

Tables, also very important, are handled rather poorly; the program has only a rudimentary table-building facility. Nor can it perform block operations on columns of text. *PS* does, however, have a basic ability to plot graphs and include them in the text.

AUTOMATIC FOOTNOTING *PS* does a better job when it comes to footnotes. An automatic footnoting feature allows the program to identify footnotes as they are typed into the text and to stack them at the bottom of the page. As footnotes are stacked, the amount of space needed is measured, and the bottom margin of the page is moved up accordingly. *PS* comes with a separate macro that can be used to scan a completed document and number the footnotes.

Other macros that come with *PS* include an automatic indexer, a mail-merge/addressing facility, and a phone dialer. You can write complex programs and assign up to about 350 macros using *PS*'s programming language.

Mastering this language is the key to getting the most out of the package. It's also a major limitation. Nonprogrammers will have some trouble with *PS*. It's really aimed at experienced programmers who are willing to do some work.

This bias is reflected in the documentation. The manual is erratic, abruptly swinging from language appropriate for a novice to a very technical programming style. It assumes that the reader can puzzle out unsupported references, and it fails to explain some commands.

Although installation is easy, novice users won't be able to figure out what to do. The instructions are scattered among two appendices, one extremely technical, and a *READ.ME* file on the program disk.

The major installation requirement is setting up an *AUTOEXEC.BAT* or another activating batch file. And you do have to be careful in dealing with *SYMBOL.COM*, the program that reconfigures the keyboard. You have to make sure that if you quit *PS* and then return to it without rebooting the system, your batch file won't try to reinstall *SYMBOL.COM* over itself. That fatally hangs up the system.

SYMBOL.COM, unfortunately, makes *PS* largely incompatible with most TSR programs, such as *SideKick*. The program plugs in its own values in the keyboard queue, changing the Alt-key combinations used by TSRs.

Another problem is *PS*'s awkward feel. Its numerous command types require some unusual key combinations. And commands are grouped poorly, making them

SOONER OR LATER, THE OTHERS WILL RUB YOU THE WRONG WAY.

That's because the others start wearing out so fast. Right out of the box, in fact. Whereas PC MOUSE™ doesn't.

It's the *only* mouse that uses advanced optical technology and all solid-state electronics. So it has no moving parts to rub you the wrong way. Which is why PC MOUSE keeps on giving you superior performance, year after year. With no mouse-cleaning or maintenance to worry about. It's so reliable, in fact, it comes with a *Lifetime* Warranty.

Besides trouble-free operation,

PC MOUSE features exceptionally smooth hand control and digital pointing accuracy. It's the only complete system that includes its own precision MousePad™, which lets you maneuver easier than with friction-activated mice. That means you can breeze through spreadsheets and graphics programs smoother than ever.

PC MOUSE works with any IBM or compatible personal computer. And it includes

PC MOUSE. Engineered like no other mouse in the world.

free Designer Pop-up™ menu software, so you can run all your favorite programs.

Sooner or later, you'll want to compare those other "blind" mice with the only one that "sees"

optically — PC MOUSE.

Just go to your dealer, and see how they run.

SFT NetWare® v2.1

MIS-conceptions about

Traditionally, the MIS world has viewed PC-based local area networks with a healthy dose of skepticism. A "prove it to me" attitude. And in an arena ruled by powerful mainframes, that approach has given rise to a few misconceptions and doubts about LAN performance.

Well, doubt no more. Because with the industry standard SFT NetWare v2.1, Novell offers the LAN software powerful enough to convince even the toughest MIS skeptic.

SFT NetWare v2.1 gives you the features and functionality of mini/mainframe systems

at a fraction of the cost. With extensive fault tolerance, security and LAN-to-mainframe connectivity, it makes LANs advanced enough for major corporate, government and education installations.

No other LAN software even approaches the level of fault protection and data security built into SFT NetWare v2.1. Novell has pioneered LAN fault tolerance, and provides protection from failures in server hardware. In addition, enhanced security locks and passwords give you complete control of the information stored on your LAN.

pport

ant Capabilities

em Security

k Management Controls

puts to rest the LAN performance.

SFT NetWare v2.1 simplifies network management with menu-driven utilities that let you control the network from any workstation. Advanced accounting features allow you to audit and account for users or departments utilizing network resources. Available communications links give you unsurpassed connectivity with mini/mainframe systems and other LANs. And SFT NetWare v2.1 supports OS/2 as well as DOS workstations.

To get LAN performance that raises your MIS standards, get the LAN system with no doubts about it—SFT NetWare v2.1. See

your Gold Authorized Novell Reseller, or call 1-800-LANKIND.

For more information, call from your modem 1-800-444-4472 (8 bit, no parity, 1 stop bit) and enter the access code NV216.

For network solutions,
you should be seeing red.

We chose *WordPerfect* as the standard against which to measure all of the word processors reviewed in *PC Magazine*—corporate, professional, personal, and scientific/technical—not because of its performance, but because of its popularity and widespread use. It was one of the top five performers in *PC Magazine's* roundup of word processors in the February 29, 1988, issue and turned in similar results this time around.

Since *Alexander* and *PCTeX* (unlike all of the other packages) were unable to import the 50K test document, no results are reported for these two packages. *Alexander* more closely resembles the other packages in this category but was able to import only about 70 percent of the test document. Unlike the others, *PCTeX* works with an existing word processor and uses typesetting rather than traditional document-control commands. In addition, one-third of the packages—*The Egg*, *ChiWriter*, *WordMarc Composer*, and *PS*—could not complete two or more of the tests.

With the exception of the Print Whole Document test, which it did not pass, *EXP* was a solid performer across the board. It consistently placed among the top five packages.

Three packages passed all the tests without a hitch: *T³*, *TechWriter*, and *Total Word*. Of this group, *T³* produced some of the slowest results, coming in last or close to last in five of the tests. However, the package showed its speed in the Global Search and Replace test, capturing first place. Despite its slowness in performing many document-handling tasks, *T³* is still a good choice because of its powerful font editor; scientific, mathematical, and chemical fonts; and Greek and Russian alphabets.

Although *Spellbinder Scientific* placed among the top five packages in the Save and Resume and Text Delete tests, it could not perform seven of the other tests and was the slowest in the Print Whole Document test. Despite these less-than-impressive results, *Spellbinder* is still worth considering because of its scientific-text-processing capabilities.

The PC Labs word processing tests were performed on an 8-MHz IBM PC AT outfitted with a 30MB hard disk drive, an EGA card. Additionally, a 1MB RAMdisk was created to perform the Print Whole Document test. All programs were run under DOS 3.2 with files and buffers equal to 20.

The tests were done using a 50K document file—approximately 14 pages long and without page numbering. The document contained 8,635 words, with 66 lines per page and 72 characters per line. The reported speeds measure the time from when the last keystroke was entered to the moment when control of the keyboard, still in editing mode, was returned to the tester. For each test except one, the original test document was used as the source document. Reported performance times are the average of three test trials, measured in seconds.

IMPORT FILE SIZE

The Import File Size test measures in bytes the final imported file size once a program brings a 50K document into its own environment. Programs manipulate files differently—for example, in the way they insert formatting codes into the document—hence the imported file size varies. Software that could not import the 50K file could not be tested. However, the inability to import large files should in no way reflect on a program's performance with smaller documents.

Performance Tests: Scientific Word Processors

CURSOR MOVEMENT

The **Cursor Movement** tests determine how long it takes to move the cursor through a document. The **Cursor Top-to-Middle** test times the jump from the top, or Home position, to a predefined point in the middle of the document. The **Cursor Middle-to-Bottom** test times the jump from the midpoint to the bottom, or End position, of the document. The **Search for Middle** test measures the time it takes to find a sentence placed in the exact middle of the document. Since some word processors cannot search for an entire sentence, the test allows for searching on a keyword or string of words.

Performance Times (Times given in seconds)	Cursor Movement		
	Cursor Top-to-Middle	Cursor Middle-to-Bottom	Search for Middle
Total Word	0.10	0.10	1.30
TechWriter	1.00	1.00	22.00

PCTeX	N/A	N/A	N/A
Alexander	N/A	N/A	N/A

N/A—Not applicable; function not available.

BLOCK MANIPULATION

The **Block Manipulation** test is based on two separate timings. The **Block and Move** test records the software's ability to define, or highlight, the first three pages of the test document and then move it to the center of the document—somewhat like a cut-and-paste operation. The test moves but does not delete the text. The **Block and Copy** test takes the same three-page block and copies it to an external file. Both tests require large-scale page reformatting that slows the performance of some programs, depending on how well they handle the task in a RAM buffer. The larger the buffer, the faster the results.

Performance Times (Times given in seconds)	Block Manipulation	
	Block and Move	Block and Copy
Total Word	109.23	2.77
TechWriter	3.00	7.00
ChiWriter	1.00	N/A

Spellbinder Scientific	N/A	N/A
PCTeX	N/A	N/A
Alexander	N/A	N/A

N/A—Not applicable; function not available.

MERGE AND TEXT DELETE

The Merge test times the program's ability to import an external file to a point immediately following the middle of the document file. The external file consists of the first three pages of the original document. Again, page formatting affects the performance results.

The Text Delete test times how long it takes to delete and delete the file that the Merge test imported and inserted into the document. Again, this procedure requires significant page reformatting, and the program's buffering capability greatly affects performance.

Performance Times

(Times given in seconds)

	Merge	Text Delete
Total Word	3.61	17.66

Back up your software with CopyWrite

CopyWrite backs up hundreds of copy protected software packages for the IBM PC. Where feasible, **CopyWrite** removes copy protection entirely.

CopyWrite now includes **ZeroDisk**, allowing you to run some popular software from a hard disk without anything in your floppy drive. Call for the list of software it handles.

CopyWrite is revised regularly to keep up with the latest in copy protection. Revisions are available for a small charge.

CopyWrite requires an IBM PC, XT, AT, PS/2 or compatible with 256k bytes of memory and at least one diskette drive. It is not copy protected. **CopyWrite** is not for making copies for sale or trade, or for any other use that deprives software authors of payment for their work.

To order, send us a check for \$50 US funds, or call with your credit card. We ship within a day. Available on 3 and 5 inch diskettes.

■ WORD PROCESSORS

rather hard to memorize.

Overall, *PS* is difficult to master. Nonetheless, it offers exceptional facilities that will make life a lot easier for experienced programmers who need to enter and format technical or scientific text and equations.—Walt Rowinski

Spellbinder Scientific

Spellbinder Scientific, *Spellbinder Software Products'* \$790 adaptation of its *Spellbinder* word processor, does an impressive job of handling scientific text. Both *Spellbinder* versions share the same command sequences, function keys, edit-mode features, and command-mode features. Features unique to the scientific version are implemented with function keys and macros.

Spellbinder Scientific lets you freely intersperse and display formulas, equations, and diagrams on-screen with ordinary text. To do so, you'll first type your text as you would any document, and then you'll use function keys to shift to the italic character set for a variable, to boldface for a vector, to math symbols for access to special symbols, and to a miniature character set for subscripts and superscripts.

FONT CAPABILITY *Spellbinder Scientific* offers eight easy-to-use function-key-selected character sets—including ASCII, italic, math symbols, and two sets of

For problems involving engineering calculations or scientific analysis, the answer is MathCAD.[®]

Transporting an iceberg to Southern California is a formidable task. Calculating the variables is just as demanding. How many tugboats would be needed to tow the ice mass? At what cost? How much fresh water would be lost?

Innovative solutions require extraordinary tools. For problems involving calculations or what-if analysis, the answer is MathCAD.

MathCAD is the only PC-based software package specifically designed to give technical professionals the freedom to follow their own scientific intuition.

Requires IBM[®] PC or compatible

You decide how to solve the problem – MathCAD does the "grunt work."

- Ends programming and debugging.
- Recalculates as variables change.
- Generates quick plots.

Easy to learn and use, MathCAD operates interactively in standard math notation. And its built-in functions provide all the power you need to solve real-world problems. MathCAD handles matrix operations, solves simultaneous equations, works with real and complex numbers, does automatic unit conversion, displays Greek characters and

other math symbols, performs FFTs and much more.

There's never been a better way to get fast, accurate solutions to analytical problems. That's why 20,000 engineers and researchers are using MathCAD daily in applications as diverse as fluid mechanics, signal processing and molecular modeling.

To find out what MathCAD can do for you, call us today for a **free demo disk: 1-800-MathCAD** (in MA, 617-577-1017). Or write to MathSoft, Inc., One Kendall Square, Cambridge, MA 02139.

TALLGRASS BACKS YOU ALL THE WAY.

*Tallgrass makes
internal and external
tape backup systems
for the IBM PC/XT/AT,
PS/2 or compatibles,
and an external
unit for your Mac
Plus, SE or II.*

We've got a whole new family of tape backup systems.

Whether you've got an IBM, a compatible, or a Macintosh, you can count on Tallgrass. We back you with all the storage capacity you could ask for, plus all the features, all the support, and all the speed you'll ever need. And we make it easy to protect your valuable data. Since all operations are automatic

and unattended, you can just set it, and forget it.

Best of all, we stand behind our products with the industry's only 3-year warranty.

But there's one other reason why so many more people are asking for Tallgrass. It's because the competition is asking so much more for their products.

Let Tallgrass start backing you up.

■ WORD PROCESSORS

chemical symbols. (ASCII, italic, and math symbol character sets may be miniaturized.) Except for a few of the math symbols, these characters may be used as super- and subscripts or may be centered.

Among the characters that compose the math symbols character set are Greek letters and logical and mathematical operators. Several diacritical marks and enhanced character forms are also included, and the keyboard diagrams included with the package map the key combinations for math and chemical symbols.

One timesaving feature is *Spellbinder Scientific's* math edit macro, which simplifies the entry and editing of a mathematical diagram. Several functions identify the top-left and bottom-right opposite ends of an area as a "function box." The macro creates fixed-shape symbols in the appropriate size for the function box, which can be moved, copied, or centered. The macro facilitates the insertion, deletion, replacement, centering, and aligning of text in one term without destroying the alignment of other terms in the diagram. The program also offers a chemical edit macro for formula diagram editing that is similar to the math edit macro. These powerful edit macros make the program a good choice as a secondary word processor for patent attorneys.

CHARACTER EDITOR A character editor lets you alter the appearance of characters; using this feature you can create a new application-specific character set. If you wanted to supplement *Spellbinder Scientific's* math and chemical symbols with those needed for electronics diagrams, for example, you would be letting yourself in for an extensive undertaking. But developing half a dozen new symbols is a realistic goal.

What *Spellbinder Scientific* displays on-screen is what it will print; with exceptions in certain enhancement modes, the program doesn't force you to visualize how strange on-screen command sequences will print out.

With its powerful edit macros, diacritical marks, a character editor, and eight character sets, *Spellbinder Scientific* is a good partner for anyone who needs to produce high-quality scientific documents.

■ SCIENTIFIC WORD PROCESSORS

T³

T³ (pronounced "tee-cubed") is big. If you can give it 3MB of disk space and your full 640K of RAM, T³ can do big things for you. Built-in fonts support scientific, mathematical, and chemical word-processing, Greek and Russian alphabets, and more. If you need symbols not already included in the fonts, you can create your own with the font editor.

If you're familiar with word processing conventions, you may have some unlearning to do before you can use this \$595 program from TCI Software Research. Its authors clearly decided to eliminate all assumptions and design the program from the ground up. For example, you can never start a new file in T³—you must always revise a copy of an existing document. Fortunately, it's easy to create shell documents that contain all the appropriate formatting commands for a business letter

or a chemistry text. The program comes with quite a few of these shell documents.

All T³ files reside in volumes, and each

volume is a single DOS file. Within a volume, document names can be up to 16 characters long, and no characters are forbidden. However, you won't be able to manipulate your files with standard DOS utilities.

DEVELOPING HABITS ANEW Your keyboard habits will have to change, too, for T³ makes extensive use of *chording*. In effect, chording allows any key to act as a Shift key. For example, the "Center" key (5 on the numeric keypad) serves as a "repeat shift." If you press and hold a cursor key, it moves just one space, but if you press Center as well, the cursor moves continuously.

The cursor keys themselves can begin chords. Hold down the Cursor Right key and tap any letter key—the cursor moves right, to the next occurrence of that letter. If you press the Del and move the cursor, the text is highlighted from the point where

■ SCIENTIFIC WORD PROCESSORS

you pressed Delete to where the cursor resides. Release it and that text is deleted. While this technique takes some getting used to, it makes the keyboard substantially more flexible.

T^3 uses horizontal-moving-bar menus. They scroll up and down, and you can shortcut them by typing the first letter of the selection you want. Almost any operation in T^3 involves at least one menu. If you need to fill in a blank (for example, a filename, a font, or a keyboard definition), hit the Menu key for a dynamically built list of choices.

MENUS AND MACROS There are so many menus that an experienced user might feel slowed down were it not for the macros. You can create an unlimited number of named macros in T^3 . To invoke a macro, hold down Ctrl and type in the name. A T^3 macro doesn't do any conditional branching; it's strictly a recorded se-

quence of keystrokes. But one macro can call another, and you can edit your macros with a T^3 utility.

For all its flexibility in terms of prepared and user-created fonts, T^3 does have

■ T^3 's authors clearly decided to eliminate all assumptions and design from the ground up.

some limitations. Delimiters such as brackets have no "stretch"—you build them from smaller pieces, and you must add pieces if your equation grows vertically. Also, the screen display for T^3 is not quite the same as its output. There's no

proportional spacing or justification on-screen; all characters line up on columns and half-rows. Fonts don't show on-screen exactly as they will print. Apparently, managing full graphics would have slowed down the program too much.

Besides handling your technical work, T^3 has the features typically found in professional word processors that let you create business documents. Business letters printed on a laser printer in a proportional font look very good, and Trigram's *Resident MicroSpell* will make sure they're spelled correctly. TCI also provides "hooks" for Borland's *Turbo Lightning* if you have it.

Don't expect to create complex documents the first day you use T^3 . There's a lot to learn, even with help from the supplied Tyro Tutorial. T^3 is immense and very powerful. Its screen display is not 100 percent WYSIWYG, but it's definitely close enough for good work. If you need to work

Travel Companions.

The WorldPort 2400™ and the WorldPort 1200™ modems are the perfect travel companions for your portable computer. They work virtually anywhere in the world, including hotel rooms and phone booths, allowing you to connect in a few million more locations than other modems.

With features superior to internal units, the WorldPort line of modems is the smart choice for all your communication needs. WorldPort modems operate from their own

internal battery, drawing no power from your laptop. Cutting edge technology brings you features such as Bell and CCITT standards, direct connect and acoustic interface (300 and 1200 bps), line size and a tiny price. The WorldPort 1200™ can be easily upgraded to 2400 bps and both the WorldPort 2400™ and the upgrade come with Carbon Copy PLUS™ communications software.

Find out more about the travel companions that won't tie down your portable computer.

Requires: 320K RAM; two disk drives;
CGA, EGA, or Hercules graphics card; DOS
2.0 or later.

In Short: This program is an easy-to-use, effective word processor capable of producing a wide variety of scientific and mathematical equations in a painless WYSIWYG fashion.

Tech/Word's word processing features are not particularly well suited for managing large documents, but the program may be a terrific solution for short scientific-technical documents. Not copy protected.

CIRCLE 636 ON READER SERVICE CARD

of an equation. For its low price, even if *Tech/Word* did nothing else but let you type math/science expressions, it would be a useful program.

Tech/Word does considerably more, but not nearly as much as do other scientific-technical word processors on the market. That's because it places a heavier emphasis on the *Tech* component of its name than on the *Word* component. So, while you can create relatively complex formulas and equations, you cannot manage complex documents requiring specific numbering or outlining schemes. It is difficult to size text and equations, and there are no provisions for managing indexes, title pages, tables of contents, tabular materials, or footnotes, all of which are typical requirements of scientific writing.

You cannot easily create multiple margins in a document. There is no drop to DOS, nor is there a way to save the current file with a new filename, resume editing

AUTOSKETCH

\$79.95

Now that the best name in CAD is this affordable, why settle for a generic brand?

What's in a name? When it comes to the Autodesk name, a lot. In fact, it's the best-selling, most well-respected name in the CAD business. There simply is not another company with the credentials to make that claim.

That's why you shouldn't settle for anything less than AutoSketch,* the best way to get started in CAD. AutoSketch is the precision drawing tool from the Autodesk family of products. Not only is AutoSketch priced at just \$79.95,* but unlike some entry-level CAD products, you don't have to keep spending more to add the features AutoSketch already has. Standard features like boxes, circles, stretching, mirroring and rotating—to mathematical precision. And advanced CAD capabilities like dynamic PAN and ZOOM and automatic dimensioning and scaling, in up to 10 working layers.

CIRCLE 165 ON READER SERVICE CARD

Of course, if you do want to move up from AutoSketch at some point, your files can easily be uploaded into AutoCAD.*

AutoSketch runs on IBM® PC/XT™/AT* and 100% compatible computers, and supports IBM's PS/2.™

So if you're ready for CAD, why not go with the name that rates highest among both critics and users? Anything else is, well, second-rate.

To order your AutoSketch directly, call 1-800-223-2521. For the name of your nearest AutoSketch Dealer or for more information, call 1-800-445-5415 or write to AutoSketch, 2320 Marinship Way, Sausalito, CA 94965.

AUTODESK, INC.

*A speed-enhanced version (9 times faster), requiring a math coprocessor, is available for \$99.95.

ARCHIVE®

CORPORATION

■ SCIENTIFIC WORD PROCESSORS

after a save, create columns, or center paragraphs of text. There's no spelling checker, no thesaurus, no control of backups or a file save procedure, and only a rudimentary search-and-replace facility. Items such as page breaks, page numbering, line spacing, and footers and headers are not WYSIWYG.

Yet, despite these limitations, what exists works well and easily. With the quick reference card and brief tutorial, I was using the program to full capacity after only 30 minutes. However, since the more-complex Alt-, Ctrl-, and Shift-key commands form the bulk of the *Tech/Word* program, since there is no context-sensi-

■ With the program's quick reference card and brief tutorial, *Tech/Word* can be used at full capacity after only 30 minutes.

tive help, and since using the fonts requires mapping the keyboard to other symbols, I usually found myself needing to keep an open manual by my side even after spending days with the program.

When you install the program, you can choose all or some of the built-in fonts. These can be modified and assigned to documents on an individual basis. The main menu is function-key driven and allows you to either edit or print a file or perform some DOS file-management functions.

SIGNS OF AGE The program shows its age when you choose to edit or print a file. It displays an unsorted list of available files. You must type rather than point-and-select the file you wish to edit. Each time you choose a file, you must tell *Tech/Word* to accept or modify your selected default fonts.

Choose edit, and you are brought to a roomy editing screen with a single status

line and a ruler line. Alt-Key commands are used to produce different text formats, many of which are displayed in WYSIWYG style on-screen. A series of Ctrl-B commands handles block cut, paste, copy, and save functions. A series of Ctrl-D commands offers a respectable variety of delete-text options, including the deletion of math structures and expressions.

AMPLE TOOLS FOR EQUATIONS

Creating equations using *Tech/Word* is a sensible procedure, and you are given ample tools. The function keys define the math structures. Structures describe the look of an intended multiline-height equation. So, for example, you can choose a triple-level I-shaped structure to enter a summation or a triple-level C-shaped structure for integrals. The program also makes it easy to include square roots, radicals, fractions, and matrices within text.

Tech/Word offers eight different math enclosures, including thin and thick brackets, braces, and borders. As you enter information in the bracketed areas, they widen to accommodate these characters. Multiline-height math functions, such as the integral, pi, and sigma symbols and arrows, are also available and are sized to your specifications with a single command.

Combining keyboard commands and special fonts creates the math expression. For a typical equation, you might need a bracket, a "triple double-level super" formation, and keyboard associations entered from any of the three built-in math fonts, a Greek font, two IBM graphics fonts, a script font, a normal font, or a custom-designed font. Two additional fonts for chemical symbols are available free of charge but are not included with the program package.

Creating expressions in this pick-and-choose manner is easy, but there are certain drawbacks. First, these clumps of graphics information can be difficult to edit. As I attempted to edit fractions or move a nested bracket, I often opted to begin from scratch. Second, this graphics building-block approach requires that you must always have the manual or the appropriate help screen displayed. Few users will be able to memorize the keyboard as-

All These Functions For \$150.00

Word processing
Document tracking
Communications
Terminal emulation

4 functions in one easy to use program that conserves your learning time, your PC's memory, and your money. Wordmover's state of the art features are based on ComputerEase Software's experience with the publishing industry since 1983.

Powerful Word Processing
written in assembly language for speed, menus for beginners, command interface for advanced users, built in spell checker, edit up to 9 files at a time, 20 level undo/redo, search and replace, proportional font support, macro/script capability, mail merge.

Integrated Communications
dialing directory, translation tables, XMODEM, unattended file receive, customizable terminal emulation for VT100, 3101 etc.

Document Tracking
Wordmover gives you the cross referencing of a database without the setup and learning hassles. Customizable "header" templates for tracking by addressee, subject, document number, etc. Selective directories by category of file.

Easy to use
Tutorial documentation keyed to progressive help screens for quick incremental learning. Pop down menus and key prompts. Customizable keyboard, commands, messages, & color.

■ SCIENTIFIC WORD PROCESSORS

sociations for all these special symbols. Third, many scientists prefer an English-language "Keyword" approach to processing math expressions because it is less intrusive. The flip side of this is that non-equation-speaking secretarial help seems to prefer the more graphics symbol-oriented solution.

TechWriter is the offspring of *GoldWord*, which is also an easy-to-use but limited word processor. In fact, it looks as if *TechWriter*'s scientific and math production capabilities were tacked onto the *GoldWord* processor. Any tailor will tell you that tacking the new onto the old invariably leaves a few seams showing. *TechWriter* does an admirable job on equations, but it just squeaks by on text processing.—**Robin Raskin**

TechWriter

TechWriter, a \$395 technical word processor from CMI Software, is reliable and relatively straightforward to use, even with its few idiosyncrasies. Although it won't do your calculations for you, the package offers a flexible and simple method for producing documents that contain equations—both mathematical and chemical—and it also has a large variety of commands.

Besides the standard ASCII character set, *TechWriter* supports three additional fonts. These fonts include the complete Greek alphabet, as well as an assortment of mathematical, scientific, chemical, text-

marking, and script characters.

Among its array of commands, the program uses function-key combinations, Shift/Alt/Ctrl-key combinations, as well as Alt-number combinations. Command sequences often consist of several logical steps. For example, you define a block of text by using the begin block and end block commands. You can then move the block of text with the move block command and clear it with the clear block command.

The template that is included with the package is a vital guide to *TechWriter*'s commands and special symbols. In case you forget how to select an alternate font, a hint on the template instructs you to type the standard character on the alphanumeric keyboard and then press F6 to toggle through the four options for that key. All of *TechWriter*'s 270 special symbols are a single character in height and are clearly displayed on the screen in WYSIWYG format.

EQUATIONS FROM SCRATCH To format an equation that takes up more than one line or that includes an oversized character, you use a special equation block that adjusts the line spacing for oversized characters and protects the equation from being interrupted by a page break. Once you go through a few preliminary steps to define a block, *TechWriter* goes into Math mode, in which you simply enter your equation as it is to appear in print. What you see on the screen is what you'll get on paper. However, it is impossible to see a double bond on a chemical symbol on the screen; this symbol looks the same as a single bond.

One helpful feature is *TechWriter*'s library of glossary, or macro, commands, activated in Math mode, that lets you draw commonly used oversized characters. Among the 20 glossary entries are the integral, radical, and summation signs; large brackets, braces, and parentheses; pi, 60- and 30-degree lines; and the carbon ring.

Once you've made your selection by pressing the Gloss key and typing a one- or two-character specifier, *TechWriter* will ask you to define the character's dimensions. You can then accept the default or specify the appropriate number of lines and columns. The package also allows you to draw carbon rings, convert a single bond to a double bond or vice versa, and *Tech-*

NOT JUST ANY CACHE!

FLASH

FLASH FEATURES

FREE UTILITIES

This rock solid supercharged package accelerates all your disk accesses, increases your cursor speed and prolongs the life of your hard disk.

FLASH speeds up data-basing, word-processing, desk-top publishing, CAD-designing and accounting software by as much as 300% or more. Even 386 machines are not at full speed until they use FLASH. It boosts your performance tremendously.

FLASH ONLY \$69.95

- ▶ Speeds up disk accesses
- ▶ Uses EMS expanded memory
- ▶ Uses AT extended memory
- ▶ Uses any nonstandard memory boards
- ▶ Uses EMS & AT memory together
- ▶ Accesses up to 3 MEGS of RAM
- ▶ Buffers 26 Device Driven Drives
- ▶ Dynamic track reads
- ▶ Can glue files into buffer
- ▶ Speeds up cursor

FLASH RAM-DISK is a Dynamically allocating RAM-DISK which shares memory with FLASH. When not in use, memory is not borrowed from FLASH. This maximizes memory utilization.

FLASH KEYS speeds up your cursor for word-processing and spreadsheet programs. Scrolling and editing become a breeze instead of a chore. You no longer have to wait for the cursor. YOU choose the cursor speed. Selecting rates up to 6 times faster than that of a normal cursor.

INTRODUCING

Savior

SAVIOR makes the seemingly impossible, possible! It raises files from the dead!!

This miraculous package, by automatically "undeleting" files, takes all the worry out of accidental deletes, and saves. No matter how fragmented your file has become, SAVIOR returns the original file intact.

SAVIOR also possesses the ability to retrieve previous file versions. It can even revive files "lost" after storing other information on top of them.

NO OTHER PROGRAM ON THE MARKET WILL DO ALL OF THIS AND ONLY USE 5K OF RAM!

Every PC owner owes it to their PC to invest in SAVIOR

SAVIOR \$89.95
FOR FLASH OWNERS ONLY \$69.95

SPOOL-MASTER

SPOOL-MASTER

offers all of the features of standard printer-spoolers plus much more. It functions as an extension to your printer's buffer. Thus allowing your program to continue processing while the printer prints.

FEATURES

- ▶ Redirect printer output to files
- ▶ Uses AT extended memory or EMS expanded memory if FLASH is installed
- ▶ Controls page eject (form feed) from keyboard
- ▶ Spooler easily controlled by simple keyboard sequences
- ▶ User selectable buffer size

Only 8K of RAM is needed to put SPOOL-MASTER to work.

SPOOL-MASTER \$69.95
FOR FLASH OWNERS ONLY \$49.95

BACKTODOS

BACK-TO-DOS offers you the ability to make ANY program a pop-up program, regardless of size. BTD offers all this flexibility while only using 15K of your precious RAM.

FEATURES

- ▶ Make any program a pop-up utility
- ▶ Uninstall unwanted TSR's in a single keystroke
- ▶ Reinstall the same TSR's back with a single keystroke
- ▶ Only 15K of RAM is needed
- ▶ Even makes PC-DOS a pop-up utility

BUSINESS/ACCOUNTING/FINANCE/DATABASE

- ☐ **Personal Finance Manager**—Menu-driven earnings, checks, and investment tracker
- ☐ **E-Z Forms**—Make generating any type of business form easy
- ☐ **Portworth Package**—Monitors and evaluates your investment portfolio
- ☐ **Easy Payroll System**—All the features you need—on-screen time
- ☐ **Mr. Bill**—A complete and evolved billing system for your business (2 disks)
- ☐ **Stock Charting System**—Creates high/low close, moving average, and other charts
- ☐ **Finance Manager II**—A powerful bookkeeping system
- ☐ **PBase**—Relational DBase with query language
- ☐ **MultiMaster**—Full-featured mail list manager
- ☐ **PC-File+**—The most powerful DBase we have found (3 disks)

WORD PROCESSING

- ☐ **PC-Write 2.71**—The most complete and popular word processor (2 disks)
- ☐ **Letter Writer**—Makes letter writing easier and more fun
- ☐ **Word-Pad 1.31**—An integrated word processor and spreadsheet
- ☐ **New York Word**—Completes with mail-merge, spell-check, and more

EDUCATION

- ☐ **Facts**—Teaches kids the states, presidents, capitals, etc. (CGA)
- ☐ **Typing Tutor**—It's easy to improve your typing skills
- ☐ **Handy Hand**—Teaches handwriting
- ☐ **DOS Tutor**—This interactive tutor helps learning DOS easy for the new user
- ☐ **BibleQ**—Test your Biblical IQ in this fun setting
- ☐ **Spanish 1**—Spanish Speller for the student (requires BASICA or GWBASIC)
- ☐ **PolyGlot**—Provides a learning environment for basic vocabulary of several languages
- ☐ **Word Processor for Kids**—Makes using the computer fun and educational (CGA)

UTILITIES/APPLICATIONS

- ☐ **MasterKeys**—Like Norton Utilities, only better!
- ☐ **Disk Master**—A disk full of Diskcheck utilities
- ☐ **Home Inventory**—Keeps track of your personal items
- ☐ **HDMenu**—Put the programs on your hard disk on screen. Has security features
- ☐ **SimCGA**—Allows a monochrome system to run most CGA programs
- ☐ **Slit-Works**—An all-in-one file, letter writer, and communications program
- ☐ **Banner Maker**—Make your own custom banners with this easy-to-use package
- ☐ **Food**—Reviews the nutritional value of the products of most national fast food chains
- ☐ **ELISA**—A hilarious version of the famous computer prehistoric
- ☐ **Database Publisher**—Prints a catalog of up to 1000 items

GAMES

- ☐ **Striker**—Helicopter attack simulation. Risk is also included (CGA)
- ☐ **3-D Pac-Man**—Is great! Also includes King and Wizard (CGA)
- ☐ **Q-Bert**—Play the famous arcade hit on your computer. Other games, too (CGA)
- ☐ **Metropolis**—Great color and sound (CGA)
- ☐ **JetSet**—A jet flight simulator
- ☐ **Hopper**—Great Frogger clone (CGA)
- ☐ **Diamond Master Baseball**—Simulate the play-by-play of baseball
- ☐ **18 Hole Miniature Golf 3.0**—Exciting game for all ages (CGA)
- ☐ **Wheel of Misfortune**—Sorry, Venue White not included with your order!

*Color Graphics Adapter card required.

SCIENTIFIC WORD PROCESSORS

Writer lets you draw horizontal, vertical, and angled lines and boxes.

PAGE-BREAK PROTECTION Another exceptionally nice feature of the program is its ability to protect a specified number of lines of a document as a sliding space. This protection could be used, for example, for a figure whose precise position in the text is not important but for which a page break would be unacceptable. The sliding space feature will print the figure on the current page if there is room or it will print it on the next page, pulling with it any lines of text that followed the figure.

On the negative side, *TechWriter* does not support paths, and simple directory features such as COPY or even DIR cannot be accomplished without exiting the document. Nor can you disable automatic backups of documents after a certain number of keystrokes have been made. Consequently, even if the changes made in a session are aborted, the original copy on the disk is still updated.

Even without its technical features, the word processor is very versatile, allowing for unlimited changes in formatting and providing for headers and footers and multiple indexes. Unfortunately, *TechWriter*'s support of columns is weak, since gutter widths cannot be specified and only even-width columns are possible. The program automatically reformats documents most of the time, but it is advisable to use the re-pagination command when you insert text or change the page numbering. Also, there is no error message when a print request is made while the printer is off-line. And there is no graceful way to abort printing.

TechWriter's documentation is complete and well above average. Once you manage to find information on a particular subject, it is clear and well explained; however, you may have to do some searching since the information you need might be scattered in several places. In addition, the documentation does a poor job of assisting you with the choice of suitable drivers for the more than 100 printers that *TechWriter* supports. The package's concise Quick Study Guide, concise containing pertinent examples, will get you off to a flying start.

Overall, *TechWriter* is pleasant to use

and fully functional for most purposes. It is a good choice for users who are looking for a straightforward and painless way of creating technical documents.

—Caroline Halliday

Total Word

Lifetree Software's *Total Word* has a rich assortment of features, making it more than a typical word-processing program. It can capture and use graphic images, preview a full page, use different font styles and type sizes, and build equations or chemical diagrams using over 400 scientific characters. Plus, typical word-processing features are abundantly present in a mix of menus, function-key commands, and Shift/Alt/Ctrl-key combinations. Priced at \$495, *Total Word* is a very full-featured program.

One of the pleasures of *Total Word* is learning it. Lifetree has produced an excellent manual and on-screen tutorial program. The tutorial helps you explore most of *Total Word*'s features in four lessons.

The main menu in *Total Word* has the look of *Volkmaster*, another of Lifetree's products. The top fifth of the screen lists 14 functions that are invoked by a single letter. These functions include retrieving,

Lotus Symphony 2.0 Upgrades From Corporate Software

Lotus Symphony

CORPORATE
SOFTWARE

UPGRADE
PROGRAM

Miller Brewing Company wanted to make light work of upgrading its users to Lotus Symphony Release 2.0. Which meant they wanted fast delivery. With no deposits or disks to return. And no minimum purchase requirements.

Clearly a job for Corporate Software, the leading value-added supplier of personal computer products to large corporations.

Through the Corporate Software Upgrade Program, we shipped Miller their upgrades in less than 24 hours. Directly to users.

And because Miller is a Lotus Master Account, there were no disks to exchange.

Powerful Enhancements
Lotus Symphony Release 2.0 gave Miller powerful enhancements to their key business functions.

Like an improved word processor with built-in text outliner and 80,000-word spell checker. A more powerful database with menu driven editing. A faster spreadsheet with minimal recalc.

A versatile graphics capability as well as VT100 emulation for improved communications. And no copy protection.

In one package, Symphony gave Miller five functions powerful enough to meet their growing computing needs. Without having to learn five separate packages.

20 Specialized Services

Making upgrades easy is just one of the ways Corporate Software helps large companies like Miller Brewing. We inventory hundreds of products for the IBM-PC and Apple Macintosh and back them with the largest independent support organization in the industry.

These resources help you evaluate, support, and upgrade products like Lotus Symphony Release 2.0 in the corporate environment. All at competitive prices.

To learn more about Corporate Software's 20 specialized services, call today. Then pick up your Lotus Symphony Release 2.0 upgrade. Or pick up a whole case.

■ SCIENTIFIC WORD PROCESSORS

creating, storing, and renaming a document and printing. The rest of the screen holds a list of files. You can retrieve these files by name or by pointing to them with the cursor and then pressing Enter. After you open a file you can use the program's scientific characters by calling up one of nine special, on-screen "keyboards." Pressing Alt-K pops up a menu window of keyboards across the top of the screen. The choices include Business/Bullets/Rules (Alt-2); Math/Logic/Sets (Alt-4); Subs & Supers/Math (Alt-5); Greek (Alt-6), and Organic Chemistry (Alt-0).

KEYBOARD DIAGRAMS When you select a keyboard, it appears at the top of the screen as a box diagram showing the alphabet keys as they appear on a typical keyboard. Each key box shows the appropriate letter and one or two symbols that can be printed by pressing the key alone or with the Shift key. For example, you can

type the small integral symbol by pressing the F key on the Subs & Supers/Math keyboard, then switch keyboards and type the not-equal symbol by pressing Shift-G on the Math/Logic/Sets keyboard.

Scientific characters can be used only if you have a Hercules board or an EGA, VGA, or MCGA board. To print the special characters, you need a Hewlett-Packard LaserJet or compatible or a PostScript printer.

Using the scientific characters to build often-used equations or drawings of chemical compounds can be done with macros. The macros menu will pop up if you press Alt-M. Recording a macro is as simple as pressing R, then running through the right keystrokes. Macros are used to record building-block pieces of equations or diagrams, making it simple to create complex formulas or structures. Macros also do more mundane work, like inserting a trademark symbol or the Italian lira sign.

CAPTURING IMAGES Creating a scientific document involves more than just typing equations or diagrams. You might also want to incorporate special graphics material from other programs. You can capture these images from the screen by using a *Total Word* utility program, called Snapshot. First you have to exit the main *Total Word* program and go to the \TOTALPGM subdirectory to load Snapshot. Then you go to any other graphics program screen to capture your image using the Ctrl-Alt-Q combination. A thin frame will appear around the image to permit cropping. The cropped image can then be dropped into a text document at any point. It can extend from the left margin to the right margin or can be sized by percentages. If you choose a smaller size, the image can be placed flush-left, flush-right, or centered. You can also put a border around it, reverse the black and white portions, and adjust the balance of black and white

Facing your facts?

As the operator of a small business you are constantly being challenged to respond quickly. Easy and efficient access to your financial data is often critical to the success of your operation.

Bedford Integrated Accounting

has been designed to let you face your financial facts quickly. Through fully integrated general ledger, receivables, payables, payroll, inventory and jobcosting, your records are as current as the latest entry.

With Bedford, financial reports are available immediately on your computer screen. No more rustling through stacks of paper for details of that transaction, or waiting days, sometimes weeks to see your financial position. You get the facts you need when you need them. Simply and comfortably.

If you find you're not able to respond as quickly as you would like, drop by your nearest Bedford dealer. They'll show you some facts about our \$249 software we're sure you'll have no problem facing.

with an exposure setting.

The graphic image itself will not appear on the document screen. You can view it at the graphics menu to be sure it's the right image, but it appears in the document as a command line. Through *Total Word's* page preview function, you can see how much vertical space it will take up on a page or in a column, but the left/right size won't show, nor will the border.

Previewing a page is very useful for getting an overall feel for the look of a format, but unfortunately that's all. The type is generally unreadable, font styles won't

show, and subtle changes in point size can't be made out. A close-up option in preview mode will display a portion of the page as it will print, but the type is very blocky. However, in this close-up view, you can see the scientific, boldface, and italic characters—all in relative size and readable.

ROBUST FORMATTING FEATURES

One of the more-powerful aspects of *Total Word* is its formatting abilities. You can change the format of a document line by line by using section layouts. Each section

Use it or lose it!

PC EDITOR'S CHOICE

• T³ • Total Word

If you need the extra functionality that scientific-technical word processors offer, in many cases you may have to sacrifice speed or standard WP features. For example, TCI Software Research's T³ (\$595) was one of the slowest programs we evaluated, but it is strong on alternate character sets, offering mathematical and chemical symbols as well as the Greek and Russian alphabets. If you need special symbols that T³ does not include, you can use its font editor to create them. Standard document control commands and a spelling checker, which typify corporate word processors, are also part of T³'s repertoire.

Lifetree Software's Total Word (\$495), the successor to Volkswriter and Volkswriter Scientific, goes even further than T³ in bridging the gap between the worlds of corporate and scientific-technical word processing. The package has several alternate keyboards and a full range of typical word-processing features, including a spelling checker and a thesaurus, indexing, non-printing comments, mail-merge, and automatic hyphenation. Not

only does it give you access to over 400 scientific characters, but its Snapshot program lets you capture graphics from other programs, making it useful as a desktop publishing tool.

Groucho Marx's statement "I wouldn't want to belong to any club that would accept me as a member" could apply to our contention that Lotus Manuscript is a strong contender for Editor's Choice—despite the fact that Lotus no longer wants to market the package in this product category. In fact, had Manuscript not been between versions during our evaluation, it would have been an Editor's Choice. That Manuscript excels at handling large documents and could go up against any corporate-level word processor is undeniable. Moreover, its equation language, which lets you enter equations by using descriptive English-language keywords, is one of the most commonsense approaches to mathematical keystroking we've seen. If you're writing a long, highly structured document replete with equations, tables, footnotes, and indexes, Manuscript is worth considering.

■ SCIENTIFIC WORD PROCESSORS

layout lets you set line spacing, lines per inch, tabs and margins, justification, and the number of columns. Once you create a section layout, it can be used anywhere in a document; existing text can always be reformatted later if you want to apply a different layout.

By using section layouts—which are indicated in a status area at the bottom of the screen—you can instantly change groups of format parameters. For example, you might go from an indented, non-justified line of text 75 characters wide, with 12 on 13 leading, to two columns of text 35 characters wide, right justified and with 12 on 12 leading, just by pressing three keys in rapid succession.

Besides creating a section layout, you can create a single page layout that specifies parameters for such elements as continuous paper form or single sheet, paper length, paper width, top and bottom margins, pagination, line numbering, and others. The page and section layouts are saved

with the document, and you can have up to 255 different section layouts for each document.

By giving your document a file extension, you create a style sheet—a combination of section layouts and a page layout—that is available every time you start a new document with the same file extension. Style sheets make it incredibly easy to produce consistent-looking reports, scientific manuscripts, memos, letters, and legal documents. And yet, layouts can be changed for an individual document without affecting the style sheets.

Section layouts can also specify type styles. *Total Word* lets you control all the resident fonts, as well as fonts from cartridges and downloaded fonts that a printer contains. You can even create a new type style by choosing the size, weight, and style of the characters from the available typefaces and then selecting certain characteristics to emphasize, underline, change in color (if your printer has color),

and shadow. The type style can be changed at any point and for as much text as you wish, regardless of the prevailing type style in the section layout.

Total Word has a host of other features typically ascribed to quality word-processing packages: a spelling checker (with 170,000 words); a thesaurus (with 300,000 words, including synonyms and antonyms); indexing capability; mail-merge; a full range of editing, copying, moving, and deleting functions; search-and-replace; headers, footers, and footnotes; automatic hyphenation (in a user-definable zone); a split-screen mode; basic math functions; word count, nonprinting comments, and on and on. In short, there is little if anything missing from this full-featured word-processing package.

—Henry Fersko-Weiss

WordMarc Composer

WordMarc Composer, from Marc International Software, is a comprehensive word processor designed for technical and scientific document preparation. With easy access to three different technical character sets and multilingual character formatting, the \$375 program also includes some of the most complete and precise documentation you'll find.

In addition to running on PC-compatible micros, *WordMarc Composer* is avail-

With LAP-LINK, They're All Talking.

The Standard in Accessibility Software for IBM and Compatibles, Laptops, and Apple Macintosh Computers.

Now you can take advantage of the best performance qualities of today's popular computer standards.

Because with Traveling Software's line of Accessibility products, you can connect and share files between practically every kind of personal computer on the market today.

All kinds of files. Like word processing and desktop publishing files. Spreadsheet files. Database files. You name it.

Just choose the LAP-LINK product that best fits your needs.

LAP-LINK LAP-LINK transfers files between IBM and compatibles, laptops and desktops including the IBM PS/2. It installs in seconds, offers a split screen design, showing files in both computers, and can transfer them at incredible speeds of up to 115,200 baud. LAP-LINK comes complete with diskettes, documentation and a universal cable.

LAP-LINK received PC Magazine's Editor's Choice and "Best of '87" awards.

LAP-LINK^{Plus} Having all the file transfer features of LAP-LINK, LAP-LINK Plus also provides the option of direct disk drive and printer sharing between any two connected computers. It's like having a two computer network!

LAP-LINK^{Mac} Everything you need to share files between any model of the Apple Macintosh (512, Plus, SE and Mac II) with an IBM or compatible laptop or desktop computer (including the IBM PC, XT, AT, and PS/2). It's easy to use, easy to set up and it's fast. Transferring files at an incredible 57,600 baud! LAP-LINK Mac is also fully compatible with both Macintosh Finder and MultiFinder as well as AppleTalk, TOPS, 3Com, and Novell networks.

So for the best Accessibility Software, stop by your local computer or software dealer today. Or call us at: 1-800-343-8080 or in Washington: 1-206-483-8088. Ask us about our FREE catalog.

LAP-LINK is surprisingly affordable at \$129.95, LAP-LINK Plus \$139.95 and LAP-LINK Mac \$139.95 (Suggested retail prices including cable).

■ SCIENTIFIC WORD PROCESSORS

able for a wide variety of Unix-based mini-computers, including ones from Sun, Apollo, AT&T, and Prime and the DEC VAX. Since the package includes telecommunications and file transfer capabilities, the PC version can send copies of a document directly to a minicomputer host.

That's the good news. Unfortunately, the screen interface, apparently written to accommodate a variety of video terminals (which makes it easier to move the software to other computers), is sadly lacking when compared with the current crop of WYSIWYG word processors. While this could not be overlooked if the package were targeted at corporate users, the package's strengths in scientific and technical document preparation make its interface tolerable.

THOROUGH DOCUMENTATION

WordMarc Composer's almost excruciatingly thorough documentation includes five manuals, each one representing a different level of expertise. A map in the front of each shows its position in the hierarchy and contains a brief description of all of the manuals. Novices will be taken smoothly through each step of using the program, but more-experienced users can skim the first two manuals and get right into advanced document preparation.

The technical reference manual tells you everything you want to know about the product. With detailed sections on the file formats used and on creating your own printer drivers (using English-language descriptions), you'll wonder if the source code for the product was included, too. And while Marc International offers technical support for \$50 a year (90 days free), you probably won't need it in light of the comprehensive documentation.

Installing *WordMarc Composer* is a snap. The installation program can be run at any time, to accommodate a change in monitors or a switch to either a different technical character set or another set of printer drivers. (Up to ten are available at a time, and over 170 drivers come with the program.)

In addition, the installation program is among the most intelligently written ones I've seen. Not only did it ask permission before making changes to my AUTOEXEC.BAT and CONFIG.SYS files, but it

was also smart enough not to make changes where my current configuration was sufficient.

WordMarc Composer has three technical character sets available: Greek, chemical, and DecTech. In addition, the conventional English alphabet can be modified to reflect European punctuation with a few keystrokes. Any monitor can be used, with the exception that computers using monochrome monitors require an EPROM from the vendor to generate the technical characters (but the European punctuation is still available without an EPROM).

Unlike most mainstream editors and word processors, *WordMarc Composer* does not strictly follow convention in its use of the PC editing keys. While this may limit its appeal to some users, several templates, guides, and diagrams displaying the keyboard configuration are provided.

WordMarc Composer is not a WYSIWYG word processor—a shame, since it handles scientific and technical text so well. Almost all on-screen document-formatting capability revolves around the use of a "format line," which is a ruler line that controls all text following (until another format line is encountered). An unlimited number of format lines can be used to control any text of any size.

Users who are accustomed to typesetting environments may find this helpful, but it does disrupt the screen. There also is a preview capability, which will display a formatted document on the screen as an alternative to printing it.

UNINTEGRATED FUNCTIONS

The processes of designating, moving, copying, and deleting objects while editing are not well integrated. Each one is separate and requires you to place your cursor at one end of a block of one or more characters, specify the operation (move, copy, erase), designate the remaining text, and press the "execute" key (Plus on the numeric keypad).

WordMarc Composer is also unable to perform point-and-shoot operations on text objects. Text objects as such (words, lines, sentences, and paragraphs) are unknown to *WordMarc*, and there is no way to designate a piece of text without moving the cursor over its characters or lines. Nor can you designate an object from its mid-

Exe.

~~Four~~ Five steps to instant programming.

Microsoft® QuickBASIC 4.0 is a revolution in BASIC programming. A revolution that earned *PC Magazine's* Best of 1987 award and its Award for Technical Excellence for the last two years.

Instant programming means instant results.

With Microsoft QuickBASIC 4.0, you get a complete instant programming environment. Revolutionary technology lets you run, edit, debug, and then continue running your program. Without a time-consuming compile step.

So you get instant results *and* instant productivity.

Instant programming also means you're always ready to debug using a sophisticated collection of debugging tools. Control program execution easily with breakpoints. Use watchpoints and watch expressions to see data values as your program runs. Even change data values and continue running!

Advanced language extensions such as records, recursion, huge arrays, and FUNCTION procedures give the language more power and versatility, so you can really flex your BASIC muscles. And Microsoft QuickBASIC 4.0 still produces the fastest BASIC code around.

A great value gets better.

At \$99 Microsoft QuickBASIC 4.0 is a great value. And now it's even better because it includes our *Value-Pack Catalog* containing coupons worth more than \$600 on add-on packages and books. And if that's not enough, there's a 30-day money-back guarantee. You just can't lose.

Take the first step into instant programming. Just call us at (800) 541-1261, Dept. E21, for the name of your nearest Microsoft dealer and start your own revolution in instant programming with Microsoft QuickBASIC 4.0.

Microsoft QuickBASIC 4.0

■ SCIENTIFIC WORD PROCESSORS

die. For instance, you must move the cursor to the beginning of a paragraph, specify the operation, and then move to the end.

Another annoying feature of editing a document with *WordMarc Composer* is its

default overstrike mode. There is no insert mode as it is known elsewhere. *Everything* can be overwritten almost all the time. To insert text, you must position the cursor, press the Ins key, insert the text, and press

"execute." Then you are returned to overstrike mode. To insert text elsewhere, the process must be repeated.

What must also be noted is that a limited on-line help facility is available, and that *WordMarc Composer* has a very powerful macro capability. The Undelete function, in fact, is actually implemented as a macro.

In all fairness, Marc International has slated the release of a major upgrade, *WordMarc Composer Plus*, to be available

■ Unlike most word processors, *WordMarc Composer* doesn't strictly follow convention in its use of the PC editing keys.

by the time this review hits the newsstands. Some if not all of the weaknesses of the current product may be remedied in the new version.

WordMarc Composer Plus, according to the vendor, will include text-sorting capabilities; an on-screen calculator; an overstrike/insert mode toggle (relieving the current overstrike-only problem); an enhanced dictionary (over 100,000 words); a spelling checker that operates while you edit; 20 different additional type styles; the ability to integrate graphics, Lotus .PIC files, and PostScript files; complete PostScript laser printer support, and automatic pagination and reformatting. The maximum right margin will be increased to 254 characters, line spacing will be able to be fine-tuned in increments of 1/10 inch, and extensive automatic date capabilities will be added. The new version will also let you convert documents to *Ventura Publisher* format.

Overall, the on-screen formatting interface is the only real stumbling block for this otherwise complete and comprehensive word processor. Despite this weakness, it is a strong contender in the scientific-technical document-preparation marketplace. —Richard Hale Shaw

Peachtree Software

A Member of the Intelligent Systems Family

4355 Shackelford Road, Dept. PCM, Norcross, GA 30093

■ PC LAB NOTES: REFRESH UTILITY ■ BRIAN K. ROEMMELE

INSTANT SPEEDUP FOR YOUR PC

This simple software technique squeezes more speed from your memory. Postponing the refresh cycle lets your PC spend more time computing.

You can learn a lot about how your PC works by studying the IC data books published by the manufacturers of its chips. While much of the material in such publications is agonizingly technical, you'll often turn up valuable tidbits that never found their way into IBM's *Technical Reference* manuals. I used this information, along with some further detective work (perusing the ROM BIOS listings), to develop a simple software technique you can use to speed up your computer.

Most PC compatibles today use VLSI (Very Large Scale Integration) chip sets, such as those produced by Chips and Technologies. A VLSI chip gathers the functions of many originally separate chips into one. In most cases, however, these large chips duplicate even some of the originally undocumented functions as well. What can complicate matters even further is that the VLSI chips may also include features that are not widely known.

You can look at a chip manufacturer's specifications and recommendations in two distinctly different ways. When designing a computer, it's a sound engineering practice to choose chips and components whose *average* ratings (as published by the manufacturer) meet your system's *worst-case* requirements. That way, when the system goes to production, all operations will be well within the capabilities of the chips.

But I spend most of my time finding the *maximum* limits of many chips in PCs. Since I'm dealing with an already-manufactured product, such as the IBM PC AT,

I use the manufacturers' suggested maximum ratings for each chip as a starting point to experiment. Analyzing the original IBM PC AT in this way led me to discover that the CPU's crystal frequency

could be increased by a huge amount with no adverse side effects.

Remember the V20? No, not the rock-et. The redesigned and enhanced 8088 work-alike microprocessor from NEC. Just pop out the Intel unit, drop in the V20, and you could (and still can) realize anywhere from a 5 to 30 percent overall speed-up in most applications. And testing the effect was easy—either you noticed a faster PC or you didn't. Needless to say, the V20 became a very popular upgrade (much to the dismay of Intel).

It's time now to add another speed booster to the list—though this time you do it in software. You can pep up the old PC again just by reducing the refresh rate. But before I show you how, let me tell you why it works.

REFRESH MY MEMORY PCs, XTs, ATs, and most compatibles use Dynamic Random Access Memory (DRAM) chips for their 640K main memory. DRAM is very popular among PC designers because the chips have a low cost per byte and tend to share timing and voltage requirements with most Intel chips.

DRAMs may be thought of as a vast array of capacitors laid out in rows and columns. The capacitors in the DRAM have two usable states: charged (a binary one) and discharged (a binary zero). Because of their design, these capacitors can hold their charge only for a relatively short period of time. If the charge goes away, so does the data. To recharge the capacitors, therefore, the DRAM must be accessed periodically. This access is called a *refresh*.

■ PC LAB NOTES

The system hardware performs a refresh on a regular cycle to keep the data stored in the DRAM valid. It's important that the refresh cycle take place before the DRAM begins to discharge, or the data stored there will become corrupted. Another type of RAM, Static Random Access Memory (SRAM), on the other hand, doesn't require any refresh cycle. (See the sidebar "DRAM Versus SRAM" for further information on this different type of memory chip.)

WAIT STATES Don't confuse memory refresh with a memory *wait state*. A wait state is a technique used to slow down the CPU when it can receive data faster than the memory can fetch it (the rated access time). The original IBM PC AT, for example, had an 80286 CPU running at 6 MHz. For many unfortunate reasons, IBM used a

wacky "piggyback" RAM arrangement custom-made for the AT. At that time, the 64K chips used to build the 128K piggyback RAM chips were available at only 200- and 250-nanosecond access speeds.

The 6-MHz AT has a clock cycle of 167 ns. The installed RAM, however, was rated for a 200- or 250-ns. access time. To run at 6 MHz with no wait states, RAM with an access time of less than 167 ns. would have been required. So, the AT wound up with hardware that would produce one wait state for all memory on the system board to compensate for the fast CPU speed and slow RAM.

TIME TO REMEMBER The DRAM refresh cycle is performed automatically by a combination of two chips: the 8253 Counter/Timer and the 8237 Direct Memory Access (DMA) Controller. The hard-

ware for this process is shown schematically in Figure 1. The DMA controller performs the actual refresh by reading all the memory locations and recharging the capacitors. (The IBM PC AT DMA hardware is constructed a bit differently and uses an 8254 Counter/Timer chip, but for our purposes it is functionally equivalent to the PC.)

The 8253 Timer Chip contains three separate timers. Timer 0 produces the system "hardware timer tick" that drives the BIOS time functions. Timer 1 is responsible for controlling the length of the period between DRAM refreshes. Timer 2 can be connected to the PC's speaker to give it a primitive sound-producing ability.

The refresh timer counts down from a programmed value, placed there by the BIOS, until it reaches zero. At that point, it notifies the DMA to start the refresh cycle

DRAM VERSUS SRAM

Dynamic Random Access Memory (DRAM) chips are the popular choice for memory storage on PCs. That's partly because they're less expensive per byte than their logical competitor, Static Random Access Memory (SRAM) chips. The DRAM design essentially requires using one transistor per bit. The immediate benefits of this are higher memory density and better use of the chip's silicon real estate. SRAM, by contrast, requires about eight transistors per bit. This means that fewer bytes of storage can be constructed per chip. Further, the more complex circuit causes a larger power consumption per byte.

If DRAM chips pack more memory per square inch and use less power, why is SRAM still around? Part of the answer lies in examining how the DRAM's single transistor per bit works.

The transistor used in the DRAM acts much like a capacitor that can temporarily store a 1 or a 0. But because a transistor makes a lousy capacitor, it loses its charge rather rapidly. DRAM is nothing so much as a leaky bucket that must be constantly refilled.

A circuit using DRAM requires re-

fresh circuitry and some portion of the system's operating time to perform the refresh. In addition, the computer must deal with the delays encountered before DRAM can be read from or written to. Why, then, is DRAM still around? As in any design, power consumption, cost, and speed must all be considered individually.

SRAM, on the other hand, is a more complicated circuit. One bit of storage is implemented as a flip/flop circuit which can be set to a 1 or a 0. The flip/flop remains in position until power is completely removed or until it is changed by storing a new value. Unlike the DRAM, no refresh cycle is needed; thus, no wasted time. The SRAM chip can be thought of as an array of on/off switches. Contrast that with DRAM, which will be fully corrupted if left alone too long.

Could you replace DRAMs with SRAMs to increase performance? Unfortunately, no. DRAM chips are not interchangeable with SRAM chips. They have vastly different support circuit requirements, and the pin assignments of comparable chips do not reasonably coincide. Simply plugging in SRAMs to in-

crease performance is not possible.

To realize the best of both worlds, however, SRAMs are being designed into some PCs to complement DRAMs. When part of an original design, the individual characteristics of both types of RAM can be fully exploited. A few thousand kilobytes of SRAM are used to buffer large amounts of slower DRAM. The system can then match the high-speed I/O of the CPU with SRAM, while leaving the slower DRAM to catch up. In some cases new PCs are using SRAM exclusively to gain every edge in the race for higher performance.

The SRAM chips being manufactured today (for tomorrow's designs) promise lower power consumption, acceptable memory densities, and the ability to work with much faster CPUs. Exotic relatives of SRAMs are even finding their way into superfast 386-based systems.

The benefits of using SRAM and/or DRAM are beginning to converge. We'll see more PCs introduced using SRAM or SRAM and DRAM combinations, but it will be some time before the raw memory densities of cost-effective DRAM will be surpassed. —Brian K. Roemmele

"Of All the Comments We've Received on the Kaypro 286, this is the One We Like Best."

It's a fact. The KAYPRO 286 kicks...and kicks out all your old assumptions about the cost of truly advanced technology. Consider this.

At its top speed of 16 MHz, the KAYPRO 286 is faster, yet less expensive than most standard 386 systems.* And with the OS/2-compatible KAYPRO 286, adapting to rapidly changing standards doesn't mean reinventing the wheel.

Card-based system components - including the 80286 CPU - provide the

ultimate in built-in non-obsolescence. Don't play catch up. Keep up with the better power machine...the "Best Buy" KAYPRO 286.

Your Authorized Kaypro Dealer is ready to give you all the details about the complete line of Kaypro desktop and laptop computers - and Kaypro's outstanding Credit and Leasing.

CIRCLE 303 ON READER SERVICE CARD

UNLEASH YOUR 80386!

Your 80386-based PC should run two to three times as fast as your old AT. This speed-up is primarily due to the doubling of the clock speed from 8 to 16 MHz. The new MicroWay products discussed below take advantage of the real power of your 80386, which is actually 4 to 16 times that of the old AT! These new products take advantage of the 32 bit registers and data bus of the 80386 and the Weitek 1167 numeric coprocessor chip set. They include a family of MicroWay

80386 compilers that run in protected mode and numeric coprocessor cards that utilize the Weitek technology.

The benefits of our new technologies include:

- An increase in addressable memory from 640K to 4 gigabytes using MS-DOS or Unix.
- A 12 fold increase in the speed of 32 bit integer arithmetic.
- A 4 to 16 fold increase in floating point

speed over the 80387/80287 numeric coprocessors.

Equally important, whichever MicroWay product you choose, you can be assured of the same excellent pre- and post-sales support that has made MicroWay the world leader in PC numerics and high performance PC upgrades. For more information, please call the Technical Support Department at

617-746-7341

mW1167 Numeric Coprocessor Board

MicroWay® 80386 Support

MicroWay 80386 Compilers

NDP Fortran-386 and NDP C-386 are globally optimizing 80386 native code compilers that support a number of Numeric Data Processors, including the 80287, 80387 and mW1167. They generate mainframe quality optimized code and are syntactically and operationally compatible to the Berkeley 4.2 Unix 177 and PCC compilers. MS-DOS specific extensions have been added where necessary to make it easy to port programs written with Microsoft C or Fortran and R/M Fortran.

The compilers are presently available in two formats: Microport Unix 5.3 or MS-DOS as extended by the Phar Lap Tools. MicroWay will port them to other 80386 operating systems such as OS/2 as the need arises and as 80386 versions become available.

The key to addressing more than 640 kbytes is the use of 32-bit integers to address arrays. NDP Fortran-386 generates 32-bit code which executes 3 to 8 times faster than the current generation of 16-bit compilers. There are three elements each of which contributes a factor of 2 to this speed increase: very efficient use of 80386 registers to store 32-bit entities, the use of inline 32-bit arithmetic instead of library calls, and a doubling in the effective utilization of the system data bus.

An example of the benefit of excellent code is a 32-bit matrix multiply: in this benchmark an NDP Fortran-386 program is run against the same program compiled with a 16-bit Fortran. Both programs were run on the same 80386 system. However, the 32-bit code ran 7.5 times faster than the 16-bit code, and 58.5 times faster than the 16-bit code executing on an IBM PC.

NDP Fortran-386™\$595
NDP C-386™\$595

MicroWay Numerics

The mW1167™ is a MicroWay designed high speed numeric coprocessor that works with the 80386. It plugs into a 121 pin "Weitek" socket that is actually a super set of the 80387. This socket is available on a number of motherboards and accelerators including the AT&T 6386, Tandy 4000, Compaq 386/20, Hewlett Packard RS/20 and MicroWay Number Smasher 386. It combines the 64-bit Weitek 1163/64 floating point multiplier/adder with a Weitek/Intel designed "glue chip". The mW1167™ runs at 3.8 MegaWhetstones (compiled with NDP Fortran-386) which is a factor of 16 faster than an AT and 2 to 4 times faster than an 80387.

mW1167 16 MHz\$995
mW1167 20 MHz\$1595

Monoputer™ - The INMOS T800-20 Transputer is a 32-bit computer on a chip that features a built-in floating point coprocessor. The T800 can be used to build arbitrarily large parallel processing machines. The Monoputer comes with either the 20 MHz T800 or the T414 (a T800 without the NDP) and includes 2 megabytes of processor memory. Transputer language support from MicroWay includes Occam, C, Fortran, Pascal and Prolog.

Monoputer T414-20 with 0 meg'\$995
Monoputer T800-20 with 0 meg'\$1495

Quadputer™ can be purchased with 2, 3 or 4 Transputers each of which has 1 or 4 megabytes of memory. Quadputers can be cabled together to build arbitrarily fast parallel processing systems that are as fast or faster than today's mainframes. A single T800 is as fast as an 80386/mW1167 combination!

■ PC LAB NOTES

Figure 1: This simple block diagram shows the fundamentals of the refresh circuitry.

and begins counting down again. Once it has been initiated, refreshing the DRAM assumes the highest priority: it takes precedence over all other system activities. Each refresh cycle exercises a single 64K block of system DRAM. So, a system with 640K of DRAM would require ten refresh cycles to refresh the entire memory space. This cycle is repeated continually as long as the system is operating.

TALK TO MY REGISTERS The DMA and 8253 Timer chips use registers to communicate with the outside world. The registers are mapped into the PC's input/output (I/O) address space, which allows us to access them directly with simple commands. This direct line of communication will let us alter the value of any writable register. (Some registers are "read-only" and don't allow this.) In most cases, a register's value can be read as well. (In the case of the timer chip, the register contains

When your basic quantum leap is just not enough:

ProBAS™ Professional Basic Programming Library

ProBAS is a library of routines that kicks QuickBASIC and BASCOM into 5th gear and gives you powers and abilities far beyond those of mortal men. It's the greatest thing since sliced bread and if you don't get it today, your hard disk will crash in retaliation. So much for the hype: now down to brass tacks:

- 232 routines (226 in Assembly)
- 600 page 3-part manual
- Full-featured windowing
- Screen snapshots
- Virtual screens in memory
- Lightning-fast file I/O
- Access EMS as files or arrays
- Full mouse support

Plus 200 essential services from directory and equipment routines to handy string, date, time, and input routines. Whether you are just starting out, or a programming guru, ProBAS will help you generate faster, more efficient code, in far less time — and we back that statement with an unconditional money-back guarantee! Thousands of programmers have benefited from ProBAS and its shareware precursor, ADVBAS. For all versions of QuickBASIC and BASCOM including BASCOM 6.0 for OS/2. Just \$99.00!

ProBAS™ TOOLKIT

The ProBAS Toolkit is a collection of assembly and BASIC modules that use the ProBAS library to save you even more hours of grunt work. Call up a ring, bar, pop-up, or pull-down menu. Pop a mini-word processor with word-wrap in a window. Put a list or file directory in a highlight window. You get:

- Loads of Menu Generators
- Fast B-tree indexing
- Mini-editor with word-wrap
- Patch .EXE files
- Protected storage areas
- Display text files in windows
- Julian date routines
- Documented BASIC source

Plus calendars, BCD math routines, clock routines and much more. In addition to the disk and 3-part comprehensive manual, you also get special access to the Toolkit SIG on our BBS system where ProBAS programmers from all over the world share their favorite Toolkit modules. If you can't call to download new modules, disks of the latest uploads are available. The ProBAS Toolkit is an ever-growing product that adds capabilities and helps conserve your most valuable asset of all-time! Just \$99.00!

CIRCLE 380 ON READER SERVICE CARD

ProBAS™ TELECOMM TOOLKIT

The TELECOMM Toolkit is a collection of high-level communications modules that plug into your code to provide popular file transfer protocols, terminal emulations, auto-dialing, phone data base, login scripts and more. Need to communicate with the world? Plug just the routines you need into your programs.

- Xmodem/Modem/7/Xmodem-1k
- Ymodem (single and batch)
- CRC-16 and Checksum
- VT65, VT100, ANSI BBS etc.
- Auto Dialer & data base
- Script language support
- Full terminal program
- Documented BASIC source

The TELECOMM Toolkit. Just \$75.00!

STORES 50 DISKS

MADE IN U.S.A.

"Best Buy" Only \$9.⁹⁵ **Curtis 5 1/4 File, 50-Diskette Organizer.**

The Curtis 5 1/4 File protects and organizes up to 50 5 1/4" diskettes and costs only \$9.95. The bronze-tint snap-lock cover protects diskettes and data from harmful dust and debris. Adjustable dividers and color-coded labels let you arrange your diskettes any way you want for easy access.

The Curtis 5 1/4 File has a special outside shell for three more working diskettes, a sturdy built-in handle for portability—and the famous Curtis Lifetime Warranty. Keep diskettes clean and organized, find them fast, and keep your desk free of clutter. The Curtis 5 1/4 File. It's another "Best Buy" from Curtis—the experts in accessories.

Curtis products are available nationally from leading Dealers, Distributors, and Retail Chains.

In Canada: Personal Computer Assoc. Inc., P.O. Box 235, Ajax, ONT, L1S 3C3, (416) 427-6612

BASIC 3.x Identifiers

This Help File lists standard identifiers for Advanced BASIC 3.x. Some of these commands will not work in Cassette or Disk BASIC, in the BASIC Compiler, or in previous versions of Advanced BASIC.

IBM-compatible computers require their own versions of BASIC, e.g., GW-BASIC. Most of the identifiers listed here will also correspond to these other BASIC versions, but some may not.

SYNTAX: BASIC {filename} [-input] [->output] [F:file] [S:base] [C:combuffer] [M:max workspace, max blocksize] [D]

filename - BASIC program file to load and run
input - file or device for redirected input
output - file or device for redirected output
files - number of files that can be open at once. Default 3. Maximum is number specified in FILES= line of CONFIG.SYS minus 4.
base - buffer size for random files. Default 128 bytes. Maximum 32767 bytes.
combuffer - receive buffer size for communications. Default 128 bytes. Maximum 32767 bytes.
max workspace sets space allocated for BASIC data and stack segments. Default 64K.
max blocksize reserves space for assembly routines above highest location BASIC can address (65536).
D makes double-precision math functions resident.

BASIC identifiers are variables, functions, statements, and commands. Variables are available for your examination and use. Functions return a value based on zero or more arguments. Statements and commands both perform an action, but in general you use statements within programs and commands in direct mode.

BASIC Functions

Arguments for BASIC functions:

bytenum: A numeric constant, variable, or expression in the range 0..255.

dummy: Dummy numeric argument.

filename: The number with which the file in question was OPENED.

number: A numeric constant, variable, or expression.
offset: An offset from 0 to 65535 in the current segment. Set the current segment with DEF SEG.

string: A string constant, variable, or expression.

ENVIRON\$ - String from BASIC's environment

SYNTAX: ENVIRON\$(string)—or—ENVIRON\$(n)
string = name of parameter to be retrieved (case sensitive)

Returns the value of the named parameter.

n = number of parameter to be retrieved (1..255).

Returns both the parameter and its value.

EOF - End of file

SYNTAX: EOF(filename)

Returns -1 (TRUE) if at end of file, 0 (FALSE) if not.

EXP - Exponential operator

SYNTAX: EXP(number)

FIX - Truncate number to integer

SYNTAX: FIX(number)

FRE - Number of unused bytes in BASIC data area

SYNTAX: FRE(dummy)—or—FRE(string)

string = a dummy argument. FRE will compress the data area if you use a string variable as the argument.

HEX\$ - Convert number to hexadecimal string

SYNTAX: HEX\$(number)

number = -32768..65535

INP - Read a byte from a port

SYNTAX: INP(n)

n = 0..65535

INPUT\$ - Read a string of n characters

SYNTAX: INPUT\$(n,[#]filename)

n = number of characters to be read from the file

NOTE: If filename omitted, reads from keyboard.

INSTR - Position of one string in another

SYNTAX: INSTR([n],string1,string2)

n = starting position for search in string1

(1..255). Default 1.

string1 = string to scan

string2 = string to search for

INT - Convert to integer by rounding down

SYNTAX: INT(number)

IOCTL\$ - Read control string from device

SYNTAX: IOCTL\$(i[#]filename)

NOTE: Can be used to determine if an IOCTL statement has succeeded or failed.

LEFT\$ - Leftmost bytenum characters of string

SYNTAX: LEFT\$(string,bytenum)

LEN - Length of string

SYNTAX: LEN(string)

LOC - Current position in file

SYNTAX: LOC(filename)

LOF - Length of file

SYNTAX: LOF(filename)

LOG - Natural logarithm

SYNTAX: LOG(positive number)

LPOS - Position of printhead in print buffer

SYNTAX: LPOS(n)

n = printer number (1..3). 0 also valid for LPT1.

MID\$ - Extract part of a given string

SYNTAX: MID\$(string,start,length)

start = 1..255. Character position to begin extracting.

length = 0..255. Number of characters to extract.

Default remainder of string.

MKD\$ - Convert double-precision to string

SYNTAX: MKD\$(double-precision)

MKI\$ - Convert integer to string

SYNTAX: MKI\$(integer)

MKS\$ - Convert single-precision to string

SYNTAX: MKS\$(single-precision)

OCT\$ - Convert number to octal string

SYNTAX: OCT\$(number)

number = -32768..65535

PEEK - Read byte from memory

SYNTAX: PEEK(offset)

—Neil J. Rubenking

■ PC LAB NOTES

Refresh Cycle Frequency and Duration

Figure 2: The efficiency increase available by changing the refresh is easily calculated as illustrated above.

the value of the countdown timer, and the readings will be constantly changing.)

By storing a new value for Timer 1 of the 8253 Timer chip, we can increase or decrease the time period between refreshes. This is important because the refresh cycle can account for anywhere between 9 and 20 percent of the system overhead. Increasing the amount of time between refreshes gives us proportionately more time for computing, thereby boosting performance. The diagram in Figure 2 shows an example of how this works. By removing some of the system overhead, you can free up more time for the CPU to spend computing and, in turn, run your software noticeably faster.

SETTING THE TIMER When a PC is turned on, one of the first tasks the ROM BIOS performs is to set the refresh cycle timer and test all available system RAM. The procedure leaves the value 12h in I/O register location 41h, which is the location of the 8253 Timer register that controls the refresh frequency rate.

The designers of the PC determined its required refresh cycle by matching the RAM chip manufacturers' average cycle recommendation. This refresh value is based on a theoretical average condition that the manufacturers estimated would be

necessary for their DRAMs to operate reliably. But it's common practice in the electronics industry for manufacturers to publish underrated specifications for a chip. This allows the quality of chips to vary

■ It's important to note that the quality of the installed DRAM chips—and whether you're using a PC, XT, or AT—has much to do with how long you can put off refresh.

slightly while still meeting the specification.

Because of this conservative approach, it's not unusual to find that the time between refreshes can be substantially increased without any ill consequences. Of course, there is a limit to how long we can put off refresh, but it tends to be far beyond the manufacturers' stated maximum.

On one test machine, for example, I was able to stretch the refresh interval from its normal value to 1,001 seconds. This reduces the refresh overhead to less than 0.2 percent and results in an overall performance increase of almost 29 percent! An interval of 1,001 seconds is incredible when you consider that on most PCs the standard refresh cycle is performed once every 15 microseconds.

It's important to note that the quality of the installed DRAM chips—and whether you're using a PC, XT, or AT—has much to do with how long you can put off refresh. It also influences just how much of a boost in performance you'll see. I've done most of my testing on IBM PC ATs and AT compatibles. The CPU speeds and wait states varied. The DRAM chips were made by NEC or Toshiba and were rated at 100- or 120-ns. access time. ATs with 100-ns. RAM and CPUs over 8 MHz tend to show the largest increase in performance. The original IBM PCs may not be able to wait as long between refreshes as ATs, but they will still show a noticeable speedup.

WHAT IF? Going beyond the limit of your system will almost always result in a "PARITY CHECK 1 00000(S)" or "PARITY CHECK 2 00000(S)" error. If

■ PC LAB NOTES

this occurs, you waited too long to refresh, the capacitors lost their charge, and the data just faded away. When this happened, one of the parity chips detected the change in value and signaled the alarm. This type

of parity error isn't dangerous and can easily be cured—just turn off the PC, then turn it back on again.

The value stored in the parity chip is calculated every time the system reads or

writes to the DRAM. (See the sidebar "Parity Checking.") The PC uses "even" parity. This means that for each byte of storage, the 8 bits of the byte plus the one parity bit assigned to that byte must equal an even number. Parity checking is a crude but effective way for the system to be fairly certain that all data stored in the DRAM is valid. IBM's reason for implementing parity checking was mainly to detect a hardware failure of a RAM chip. When extending the refresh cycle, the parity chip is our safety net and warns us when we have gone a little bit too far.

THE QFRESH PROGRAM To experiment with the refresh rate on your machine, you'll need a text editor that can produce pure ASCII files to create the DEBUG script shown in Figure 3. Saving the listing as an ASCII text file will allow us to experiment with various values, without retyping the program each time. (If you

```
N QFRESH.COM      ;Name = QFRESH.COM
A 100             ;Start Assembler
MOV AL,74         ;Select Timer #1 for a 16 Bit
OUT 43,AL         ;Number and to count down in binary
MOV AL,LL         ;Insert the low byte value
OUT 41,AL         ;Insert the high byte value
MOV AL,HH
OUT 41,AL
INT 20            ;Exit to DOS
                  ;Stop Assembler's Auto line numbering
R CX              ;Call CX register
E                ;Tell how many bytes to write to disk
W                ;Write the file
Q                ;Quit DEBUG and exit to a DOS Prompt
```

Figure 3: The DEBUG script file for QFRESH.COM allows you to experiment with alternative refresh values. See the text for an explanation of the parameters.

THIS SUMMER, STAY AHEAD OF THE COMPETITION

Give yourself the marketing edge this summer. Keep the competition in your wake by ordering reprints of your product's review from one of Ziff-Davis' leading computer magazines.

Ziff-Davis reprints are custom-designed on 80 pound stock

and printed from full color to black and white.

For more information, contact Jennifer Locke—Reprints Manager, Ziff-Davis Publishing Co., One Park Ave., New York, NY 10016, (212) 503-5447, or on MCI Mail. (Minimum **20** order 500 reprints.)

ANNOUNCING THE FIRST TIMED-RELEASE SOFTWARE.

Forget-Me-Not,
the first timed-release
software, directs your PC to
perform all kinds of tasks...minutes,
hours, days, weeks or months into the future.

With this breakthrough program, you predetermine
what you want to happen and when. Then, at a precise
point in time, **Forget-Me-Not** releases your commands and
launches your computer into action.

Just exactly what will **Forget-Me-Not** do? First, it lets you
automate all kinds of work (with your computer completely
unattended) just by writing timed-release batch files.

Imagine: now you can have your PC print lengthy
reports while you're enjoying dinner! You can back up file
after file while you're away for the weekend. Download
data...and have it printed and waiting for you when you
arrive at work in the morning!

With **Forget-Me-Not**, you can also send reminder
messages to yourself. It can read your daily appointment
calendar from **SideKick™**. Or you can create reminders
from scratch, using your favorite word processor.

This unique product will help you meet deadlines.
Divide your time over key projects. Improve your time
management skills. Keep others on schedule. Plus, you'll
never miss a meeting, birthday or anniversary again!

Forget-Me-Not also adds a new dimension to your
electronic mail system. You'll no longer have just two
choices: sending mail "now" or "not now." You'll be able
to write mail today for delivery while you're out of town next
week. Send reminders to everyone working on a project.

Whatever you predetermine, it delivers.

Put **Forget-Me-Not's** power to work for yourself...or for
your LAN. The possibilities are as unlimited as your creativity!

System requirements: 100 percent IBM PC compatibility, 128K RAM and DOS 2.0 or greater.
IBM is a trademark of International Business Machines. SideKick, Borland International

■ PC LAB NOTES

feel comfortable working with DEBUG, you can enter the statements directly.)

If you examine the DEBUG script, you'll see that its first line loads the AL register with 74h. When this value is output to I/O port 43h, it tells the 8253 Mode Control Register to select Timer 1 and to expect a 16-bit number. The refresh timer is now ready for us to program in a new refresh interval. The number is a 16-bit value, but it must be divided into a low byte and a high byte because the I/O register can only accept one 8-bit number at a time.

In the script, there are two labels shown as *LL* and *HH*. These labels represent the low and high byte of the 16-bit number destined for port 41h. *Don't type these labels as shown!* Instead, replace them with the hex numbers that represent the new refresh value. Start out by entering 30 where you see *LL* and 00 where you see *HH*.

Except for the two refresh value labels, type in everything exactly as shown in Fig-

■ You can use the tests in the PC Labs Benchmark Series (available on PC MagNet) to gauge the level of performance gained from QFRESH.

ure 3. Be sure to press the Enter key at the end of each line, especially the last one, and to leave a blank line just above the RCX. There is no need to type in the semicolons or the remarks that follow them.

The program should be saved on your disk as an ASCII text file called

QFRESH.SCR. Next, make sure DEBUG is in your current directory or in a directory listed in your PATH statement. Then create QFRESH.COM by entering the following command:

```
DEBUG < QFRESH.SCR
```

If you get no error messages, execute the program by entering the command

```
QFRESH
```

A refresh value of *LL*=30 won't cause a parity error on most PCs. You should also notice an increase in performance. Running almost any program will exercise the DRAM enough to cause any potential parity errors to surface. You can use the tests in the PC Labs Benchmark Series (available on PC MagNet) or another performance benchmark program to gauge the level of performance gained. Test programs, which calculate and display CPU speed in megahertz, will probably show a

PARITY CHECKING

In all the members of the IBM PC family (including clone cousins), a row of memory is made up of nine chips. Since memory is allocated in 8-bit bytes, you may wonder what the extra bit in the extra chip is for. That 9th bit is called the *parity* bit, and the data stored in that bit alerts us if an unauthorized change in the RAM occurs.

The bits in the parity chip are controlled by what is called the "74ALS280 Odd/Even Parity Generator/Checker." When a byte is written to memory, by loading a program or performing a calculation, for example, this chip determines whether the total of the bits in the byte is even or odd. If the result is odd, a 1 is stored in the parity bit. If the result is even, a 0 is stored. Because the PC stores the one-digit sum of the byte, the total of all 9 bits will always be even. This condition is known as *even parity*.

Whenever a byte is read, the Parity Generator/Checker recalculates the parity and compares it with the result previously stored in the parity chip's bit. If the two don't match, the dreaded Non-

Maskable Interrupt (NMI) is generated and you get a Parity Check Error message on the screen. This process is illustrated in Figure A. When this happens, you have little choice but to turn the machine off until the problem can be corrected.

Parity errors can be caused by various events. The most common cause by far is a machine language program that runs berserk and generates a spurious NMI. In most cases this won't actually corrupt any memory, but the CPU will nonetheless interpret the NMI error as being real. On the other hand, when one or more bits within a RAM chip or supporting circuitry fail, the NMI error is real and has the effect of preventing any further use of the machine.

Parity checking is a very simple form of error detection. It was probably IBM's intention, when designing the PC, to include both parity detection and *correction* facilities to convince distrustful mainframe managers to accept the PC as a viable machine. This would have been nothing new to them. In fact, they had

been accustomed to error detection and correction for years. But including a more involved procedure to be able to *correct* certain errors instead of merely reporting the fact would have been much more costly and, thus, lost out in the PC design.

There are quite a few methods for performing error correction. Most are based on fairly complex algorithms, although custom chips are available that will do it automatically. Unfortunately, the methods require more RAM to store the needed extra information.

In retrospect, it is understandable why IBM chose not to include error correction on PCs. The PC was not conceived as a serious business machine, and so no one thought it would ever need more than 640K. Today's "next-generation" PCs (PSs?) will need 3MB of memory just to get OS/2 up and flying. With all that operating system just sitting and waiting in RAM, ready to be corrupted, I think it will be none too soon before error correction becomes mandatory.

—Brian K. Roemmele

reading higher by 0.5 to 2 MHz. Obviously, the CPU's speed hasn't actually changed. Rather, such benchmarks determine the CPU speed by performing a series of calculations. Because the new refresh allows the PC to calculate faster, the benchmark believes your CPU clock speed has increased.

LIVING ON THE EDGE We started out with a relatively safe, low value for *LL*. The larger the *LL* value, the longer the PC will wait between refreshes. With this in mind, you can begin to try new values for *LL*. Try incrementing in steps of 10 or 20. Remember that *LL* is a hex number, and the maximum value is FF. Don't, however, use the value 00. This will produce no refresh cycle and a guaranteed parity error.

To experiment with different values, edit the QFRESH.SCR file and change the values of the *LL* and *HH*. Save the program as QFRESH.SCR and assemble

■ The new refresh allows the PC to calculate faster, making the benchmark believe your CPU clock speed has increased, though it actually hasn't.

again through DEBUG. Once you reach *LL*=FF, keep that value constant and start to increase *HH*. Begin with the *HH*=01 and work your way up.

At each increment level, run the PC Labs Benchmark Tests and take note of the changes in the readings. At some point

there will be no increase in performance, even though you may be a long way from reaching FF. This occurs when the refresh overhead has been decreased by such a large amount that any additional change doesn't produce a noticeable increase in speed. In some cases, *disk* performance will decrease substantially if you go too far beyond your system's optimal setting. Once you find you can increase the value without realizing any further return in performance, go back to the lowest number that created the highest performance. As one final test of your optimum values, leave your PC turned on but inactive for an extended period, say, overnight.

To make your performance increase automatic, enter your system's optimal values permanently in the *LL* and *HH* locations in the QFRESH.SCR file. Once again, use DEBUG to create the .COM file. You can run the final version of QFRESH by entering the name at the DOS

art of persuasion.

Today, having a good idea isn't good enough.

You also have to convince other people it's a good idea. And nothing gives your ideas more power and impact than DRAWAPPLAUSE™ from Ashton-Tate.*

It's the state-of-the-art presentation tool for IBM's new PS/2™ family and other 286/386 based computer systems. Because its amazing array of graphics capabilities takes you far beyond conventional business charts and graphs. To a whole new level of persuasion.

DRAWAPPLAUSE lets you integrate graphics, text and data. Quickly and easily. To produce dynamic overheads. Impactful full-color slides. Impressive printed documents. Everything you need to create winning presentations. Without spending a cent or a minute on outside graphic design services.

DRAWAPPLAUSE transforms dull numbers into powerful charts and graphs. At the touch of a key or the click of a mouse. It also lets you integrate text and graphics in seconds. And you can quickly change typefaces, type sizes, and colors to create the exact visual effect you want.

DRAWAPPLAUSE also gives you a ready-to-use library of professionally-drawn, full color pictures and graphic images. Everything from a house to a hamburger.

Easy-to-use drawing tools allow you to

customize charts and graphs. Or create your own original images. And bring them to life with a choice of over sixteen million colors.

You can also enhance your visuals with some very special, special effects.

Like graduated backgrounds, shadows and halos to make words or images stand out. Everything you need to draw people into your presentation.

DRAWAPPLAUSE can also draw on other programs for input. Like Ashton-Tate's dBASE III PLUS™ and PRESENTATION PACK™. Or Lotus® files and Harvard Graphics™. You can even import DIF and CGM files.

DRAWAPPLAUSE lets you project the most polished professional image possible. With 35mm color slides, overheads or hard copy you can produce yourself. Or we can process and ship to you. All that's required is a modem and our Ashton-Tate Graphics Service.*

For more information about DRAWAPPLAUSE or the Ashton-Tate Graphics Service, just call 1-800-437-4329, ext. 207.*

DRAWAPPLAUSE from Ashton-Tate.

When it comes to persuasive presentations, it deserves a standing ovation.

prompt or by including it as the last item in your AUTOEXEC.BAT file. And before you trust anything, be sure to give a trial run to all of your applications to be sure everything is working as expected.

SLOW IT DOWN What refresh giveth, refresh also taketh away. If you need to decrease your system performance, you can put in 00 for HH and a value for LL in the 01h-11h range into the QFRESH.SCR

file. Create QFRESH.COM and rename it SLOWDOWN.COM. Because these values increase the number of refresh cycles, they reduce performance by about 5 to 15 percent. Why would you want to slow down your machine? Well, I can recall at least one occasion when I have saved myself from total insanity. I had a system that kept locking up with intermittent parity errors. The RAM was beginning to go south, but it still had some retention left. So I loaded a 01h in the low byte of Timer 1,

TO KEEP YOUR DATA, SAFE: THE BACKUP POWER LINE THAT NEVER BLINKS, BROWNS OR BLACKS OUT.

It is said that knowledge is power. But when the power blinks, browns or blacks out—what do you know? Without SAFE backup power, you'll draw a blank.

Blank screen. RAM data lost. Lost files. Maybe far worse.

You might lose a day's work. Or a critical proposal, on hour before presentation. Or all of the data on your hard disk if it crashes beyond repair.

That's what happens when your power "blinks" even for just a few milliseconds, for shorter than the blink of an eye.

If you depend on your PC's or mini's to make your business run, you should insure your data and

hardware with SAFE's backup power line. A full line of power protection systems for every PC and minicomputer application.

SAFE's intelligent, battery-powered systems monitor interruptions and respond before you have problems, giving you ample warning and up to 20 minutes to power down, if needed.

And, SAFE power systems act as line filters to protect against spikes and surges. They're always charged up and ready—just like a backup power line.

The cost? Starting at \$395 for a PC user. For mini's, under \$800.

For more information or your nearest dealer, call (800) 325-5848.

■ Before you run QFRESH, be sure to give a trial run to all of your applications to be sure everything is working as expected.

which decreased the time between refreshes. That made the parity errors disappear long enough for me to finish my project.

COMPATIBILITY I've tested about 200 of the most popular software packages and have yet to find any incompatibilities. The software usually interprets the new refresh cycle simply as a faster CPU speed. With DOS systems reaching speeds of 25 MHz, most software authors are getting into the habit of not assuming CPU speed. On the hardware side, as I mentioned before, the RAM chips can make a difference. In most cases better quality means better results. All of the expansion cards that I have tested checked out fine with the new refresh. The list ranged from the standard assortment of memory and video cards to exotic zero-wait-state memory boards and network controller cards. I hope you find QFRESH as useful as I have and squeeze out every last drop of performance from your system.

Brian K. Roemmele is the president of Ariel Computer Corp.

Software Breakthrough: the RANDOM information processor

New Concept

With all the software tools available, it is surprising that an important need has been overlooked—a way to deal with the countless bits of RANDOM information you spend hours with every day. Tornado will not only give you instant access to this important information ... it will help you make better decisions and even think more clearly. Try Tornado risk-free and discover the productivity software package for your PC that works wonders.

TORNADO™

Limited
Time Offer

\$49.95

ONLY
(Mini version)

30-DAY MONEY-BACK GUARANTEE
(When ordered direct)

■ RANDOM Information

Did you ever realize that over half the information you deal with every day is the RANDOM type? Not databases not spreadsheets not long documents but the information scattered around your workplace and in your head. Yet amazingly, until now there was no great software to help you the tools were either too structured or without organization. But now, at last, there is a quick and easy solution—Tornado—acclaimed by rave reviews and accepted by corporations nationwide. Whether you are a business executive, consultant, engineer, or in any other profession, you need Tornado—it will save you endless time and effort every day—guaranteed—or your money back. Here is how it works:

■ Information Windows

With Tornado, you process information in stacks of superfast "intelligent" windows—several on your screen at once. You type into the windows; interconnect and prioritize them; and scan through them in remarkable ways.

■ Free Form

Tornado is FREE-FORM. It works the way you think. To start a new window you just press N, and enter information. No file names. No extra keystrokes. To retrieve information you just press G (for Get), with any word or phrase—you'll watch Tornado zip through your windows like lightning linking and opening those requested. You can even flip through your windows with the arrow keys and watch them instantly pile up and lift away. These are just three of 18 easy but powerful features.

■ Countless Uses

There are thousands of uses for Tornado. When Harry calls you on the phone, in two seconds flat you'll display the six windows on Harry before he finishes his first sentence! No more embarrassing pauses or scrambling for information. Tornado is so versatile you can write and print a letter faster than ever, track things to do, edit electronic mail, and plan a project or event quickly and easily. You can even build a sophisticated "knowledge" base or an unstructured data base without programming. And that's not all. Track phone conversations, numbers, customers, and all your other RANDOM information. On a portable, Tornado is your ideal moving office. Best of all, you tailor Tornado to your own needs easily!

■ 25,000 Windows

Instead of one window or ten, imagine up to 25,000! It's like extra memory...for your brain! The uses are endless. If you can "type" it you can "Tornado" it. And because it's memory resident (if you choose) you can quickly jump in from other programs—even move information between them. All this power, yet reviewers agree you can start "Tornado-ing" in 15 minutes—not 15 days.

■ Three Versions

Choose the Tornado that's right for you: **Mini Tornado—\$49.95—NEW!** Lowest cost version—limited capacity (up to 600 windows and 60,000 characters); does not have: cut & paste, window join, screen grab & put, time & date & sequence stamp, multiple forms, compound searches.

"Excellent! Excellent! Excellent!"

Even the greatest perform improved upon. Introducing

In athletics and in business, if there's one rule that leads to lasting success, it's this: You have to strive constantly to be better. Even when you're known far and wide to be the best.

That's the way it was with WordPerfect® 4.2. We knew we had a winner, but we also knew that we wanted to do even better. And now the day has come.

Introducing WordPerfect 5.0,

our greatest achievement to date. WordPerfect 5.0 retains all the advantages and ease-of-use of 4.2, but with important new work-enhancing innovations.

Innovations like integrated text and graphics. WordPerfect 5.0

WordPerfect 5.0 is compatible with most popular graphic formats and software programs, including HPGL Plotter and Lotus PIC files. And it allows you to scale, move or rotate most images.

lets you "illustrate" a point anywhere in your document. So whether you want to place an image in mid-sentence, alongside a

paragraph or within a header or footer, the choice is yours.

And WordPerfect 5.0 lets

mances can be ing WordPerfect 5.0.

you create documents containing numerous type fonts and font sizes without having to change your margins, tabs or column definitions. You can also choose whatever

Parallel columns now extend past a page break automatically. And spacing can now be changed within a column.

typefaces your printer allows—from an assertive, extra-large times roman

bold to an elegant, extra-fine italic—and 5.0 makes all the necessary spacing adjustments automatically as you go.

If you're interested in a uniform look—in newsletters, for example—WordPerfect 5.0 has a new Style feature that lets you easily specify the format of your text. Styles are very flexible and can include size and font attributes, text, and other formatting specifications.

And WordPerfect 5.0 offers many other sophisticated advances. Like an improved Preview that shows you what your document will look like before you print; letting you see actual font sizes, proportional spacing and justification. It also lets you zoom in on details, display an entire page of text and graphics at once, or view facing pages together.

There's also the new Master Document feature, which allows you to combine files. So if you're compiling portions of a major pro-

WordPerfect 5.0's improved Preview feature lets you see what your document will look like before you print.

posal or putting together chapters of a book, you can assemble a table of contents and an index, generate references and print the entire document easily.

Additions also include automatic referencing, automatic redline and strikeout, an alternative mnemonic interface, enhanced macro and macro editing capabilities, and improved parallel columns.

Check out all that the new WordPerfect 5.0 has to offer. It's the powerful performer from the company that's produced the number-one selling word processor for over two years running. For more information, write to WordPerfect Corporation, 1555 North Technology Way, Orem, Utah 84057. Or call (801) 225-5000. (In Canada, 1-800-267-2499.)

EEEE
EEEEEE

Typefaces can be mixed at will—up to 250 on a single page, depending on printer capabilities. And print sizes span a wide range.

COMMUNICATIONS AND VIDEO SETUP WITH SETMODE

Configuring your PC through the MODE command is tedious and tricky. Here's a resident utility that makes setting your video mode and communications port parameters easy.

Most PC users leave the chore of setting up their machines to the ever-helpful Someone Else. Thanks to him, they never have to worry about such essential but unlovely details as data bits, stop bits, and video modes. But if Mr. Else ever gets sick and you have to configure anything but a plain-vanilla PC, you'll be glad you've got a program that gives you straightforward, comprehensible choices in place of the arcane syntax of the DOS MODE command.

SETMODE is a memory-resident utility program that gives you complete control over your communications ports and video modes. It provides the most-commonly-needed functions of the conventional MODE command and even provides access to information and features DOS ignores completely. Because it stays resident, you can make subsequent changes at a moment's notice. And since it's menu driven, setting up your system is simple.

The easiest way to get a copy of SETMODE.COM is to download it from PC MagNet, as explained in the sidebar "SETMODE by Modem." If you want to type in the code yourself, the source code (SETMODE.ASM) and a BASIC program (SETMODE.BAS) that will create SETMODE.COM are listed here and are also available via PC MagNet.

USING SETMODE As a resident program, SETMODE must be installed before it can be used. You can do this either by entering

at the DOS prompt or by entering that command as a line in your AUTOEXEC.BAT file. No parameters are needed. Once installed, you invoke SETMODE by pressing the Alt-M key combination. (A later section in this article will show you how to change the default Alt-M hotkey if you wish.) When you do, a window similar to that shown in Figure 1 will appear on your screen, indicating the current settings of the communications ports and the current video mode. A moving-bar-style cursor will also appear (initially located on the video mode selector), showing the active field.

You use the Plus, Minus, and arrow keys to make any changes desired, and when you hit Enter, the window disappears and the new video mode becomes effective. The display is cleared and the cursor is moved to the top left corner. Because SETMODE does not work through DOS, however, the prompt that was originally on your screen won't be replaced and you'll find yourself staring at a blank screen. Don't be alarmed. Just press Enter once again, and your friendly DOS prompt will reappear. (If you're running a program when you pop up SETMODE, you'll have to perform some program function that up-

Figure 1: A single keystroke brings up this menu, which lets you configure your system with a simple moving bar.

SETMODE

UTILITIES

dates the screen. It's a good general practice, however, to make mode changes only at the DOS prompt.)

If you press Esc, the window is removed but the video mode will remain unchanged. Any new communications port settings you've made on the screen menu will still go into effect just as if you had hit Enter.

Unlike many pop-up utilities, SETMODE is equally at home in graphics or in text modes. It does need to make slight adjustments, however. You'll notice its normal double-line border is replaced with a row of asterisks when you change into a graphics mode. This is because not all display adapters have the necessary screen fonts for the line characters in graphics modes. The display may also appear in different colors, depending on what type of adapter and display you're using. You'll also notice that the moving bar won't be visible in the three monochrome graphics modes (6, 15, and 17). When in these modes, you'll simply have to look at the numerical display indicator in the lower window to select a mode, moving from one to the other with the Left or Right Arrow key. Remember that the mode you select won't become obvious until you press Enter twice: once to effect the command, and again to return your DOS prompt.

VIDEO MODES Which modes are available depends on what adapter(s) and monitor(s) are installed in your system. If you've got a modest system with only a monochrome adapter and display, you'll have to be content with mode 7. With one of IBM's proud new VGA displays, you can pick from any of 15 available modes. A table of the modes supported by other adapters is shown in Figure 2. SETMODE automatically determines which modes are available for you and restricts your selections to the valid modes. (If you're wondering what happened to modes 8 through 12, they're reserved for the PCjr and for performing several internal EGA functions.)

The most common modes are 3 for color or text and 7 for monochrome text. Most programs can run only in these modes. If you inadvertently switch to one of the graphics modes and then run a text-oriented program (such as a word processor),

Video Adapters and Supported Modes

Mode	VGA	MCGA	EGA (color monitor)	EGA (mono monitor)	CGA	MDA
0 text	●	●	●	○	●	○
1 text	●	●	●	○	●	○
2 text	●	●	●	○	●	○
3 text	●	●	●	○	●	○

●—Yes ○—No

Figure 2: Not all video modes are available with every display adapter. Here are the combinations that will work.

don't be surprised if your display switches back to a text mode. Well-written software that can't operate in graphics wisely adjusts the display during its initialization. If a program skips this vital step, it will likely display garbage on the screen.

If your system has more than one display card installed, SETMODE can switch the active adapter for you. The monochrome display can use modes 7 and 15. All other modes require a color monitor.

When browsing through the available video modes, you'll be able to see the available resolution with each mode in the window. For text modes, this is the number of rows and columns (some EGAs can display more than the nominal number of characters). For graphics modes, the number of picture elements (pixels) is given. The initial mode is indicated by an arrow at the bottom of the lower window. If you don't want to disturb the display, be sure to return to this mode before pressing Enter. Remember that when the mode is changed, the screen will be cleared.

To harness the full capability of your EGA or VGA display system, you'll want to combine SETMODE with a color pro-

gram such as SPECTRUM (see PC Lab Notes, June 23, 1987). With this duo, you'll have the power you need to experiment with more color options than DOS ever expected.

One limitation of SETMODE will become apparent when the program is activated in a graphics mode. Although the original text is restored, any graphics (such as a pie chart or picture) are lost. SETMODE can save only the underlying character data. In fact, you'll notice further that the text is always restored in black and white. Although it would be theoretically possible to correct this problem, the wide variety of graphics modes would have made the resulting code extremely complex. Further, a very large amount of memory would have been required to save graphics images, and it's important for resident programs to use as little memory as possible. Character data is always preserved, however, even in graphics mode.

THE SERIAL PORTS In addition to switching video modes, the communication port protocol can be initialized or changed with SETMODE. When the pro-

At only \$299, DesignCAD is the simplest way to get some very sophisticated results.

You can spend thousands of dollars for a CAD software package without getting the kind of power and performance that DesignCAD delivers for only \$299...complete! With the DesignCAD's easy-to-use, easy-to-learn single keystroke commands, you'll be producing ultra-sophisticated results in no time at all.

The Features You're Looking For

The options you normally have to purchase separately with other CAD programs, aren't options with DesignCAD. They're built in.

- Expanded Memory Support
- Selection of Character Fonts
- Symbol library with over 500 symbols
- Bill of Materials utility
- Finest curve fitting in the industry
- Extensive snap features

- True Auto Dimensioning with several formats
- Extensive layering features
- Full zoom, pan and rotate capabilities
- And many other features

In addition, DesignCAD's extensive file transfer utilities allow you to read and write different formats. DesignCAD allows you to: transfer documents to and from IGES, DXF, HPGL, transfer to GEM and Postscript, and to read ASCII text files and X,Y Coordinate files.

DesignCAD re-defines Compatibility

Virtually any printer, plotter or graphics adapter compatible with IBM PC is compatible with DesignCAD. DesignCAD is also compatible with most other CAD systems, large and small.

For all of the capability, compatibility and ease-of-use you need in a CAD system, get DesignCAD — only \$299! See your local computer dealer, or contact:

CrystalPrint™

The Most Personal Page Printer Since the Ballpoint Pen.

Personal

Small. Lightweight. Fast. Quiet. As convenient and affordable as your personal computer. That's why you should investigate the CrystalPrint family of page printers today.

Personal Size

CrystalPrint page printers take 50% less space than the leading laser printer. And they weigh 30% less. That means they can be desktop close, even when space is precious.

Personal Productivity

CrystalPrint Series II_{ws} and CrystalPrint WP_{ws} page printers put six pages within arm's reach in a minute. There's no waiting. No ear-shattering noise. No traipsing around the office to a shared printer. Even the paper tray is conveniently front-loading to make you more efficient.

Professional Performance

CrystalPrint Series II gives you full HP® LaserJet Series II™ emulation and fonts. CrystalPrint WP comes with Qume/Diablo emulation. HP or Epson emulation for presentation graphics and desktop publishing is optional. Other emulation and font cartridges are available for both models. And both use a reliable liquid crystal shutter print engine to deliver crisp, clear text and graphics — print quality that rivals the most expensive page printers on the market, but at a much lower cost.

Personal Price

Here's the best part. At \$1999* for the CrystalPrint Series II and just \$1299* for the CrystalPrint WP, page printing is now closer to you than ever before, and as convenient as — well, reaching for your ballpoint.

For the location of the nearest CrystalPrint dealer, reach for your telephone, right now, and call (408) 988-5149.

Dealer inquiries invited. See how the CrystalPrint dealer program can benefit you.

CORPORATION

Setting New Standards.™
2551 Walsh Avenue, Santa Clara, California 95051

When our engineers developed the first 2 MB diskette, some major projects had to be put on hold.

Unmowed lawns. Overgrown gardens.
And unpainted fences. It wasn't pretty.

But, being the first company
in the world to introduce the
2 megabyte diskette was worth
it. According to our engineers.

Six years and many, many

weekends of hard work finally paid off.

In March, 1987, history was made.

We introduced a 3.5 inch diskette
that could hold twice as much
information as any other diskette
for specific systems.

Its performance redefined

the word precision. Its reliability and durability were legend.

In short, it was the ultimate 3.5 inch diskette. But that still wasn't good enough.

That's why to this day, our engineers are still hard at work. On diskettes. Data cartridges. And other forms of magnetic media. Every day. Every

weekend. Trying to improve. Reinvent. And make history all over again.

So, until then, you'll just have to settle for state of the art.

And hope you're not one of their neighbors.

For more information, call 800-888-1889, Ext. 75. Supporting the dream.

PC MAGAZINE ■ JULY 1988

"Simple To Use, Works Well And Best Of All Is Easy On The Budget"

—PC Magazine

\$395
JT Fax By Quadram

Send facsimiles with your PC/XT/AT or compatible and one of Quadram's JT Fax products.

Helpful menus and loads of versatile features make JT Fax easy to use—like auto-conversion of word processing files to ASCII. And you can add your letterhead and signature to documents automatically with any JT Fax product.

Fax To Go

If you're on the go, consider the JT Fax Portable. It slips into your pocket and plugs into any MS DOS portable's serial port to let you fax from wherever you are.

Common Interface

The JT Fax half card internal shares a common software

interface with the JT Fax Portable and even the lightning fast JT Fax 9600, the lowest-priced 9600-baud adapter. With the LAN operating software, the JT Fax 9600 is perfect for shared use on a network.

So you can support dozens of word processing, spreadsheet, and graphics packages while sharing the same interface with others in your organization.

Unique Technical Approach

JT Fax was nominated for PC Magazine's Technical Excellence Award. And in selecting JT Fax Editor's Choice, PC Magazine said "An innovative approach is

the key to the success of JT Fax: it converts documents on the fly while transmitting them at half the speed of the other units. This approach keeps its cost down and saves file storage space, without degrading image quality and without delaying typical transmission times appreciably."

NOMINATED 1987

Call us at (404) 564-5666 for dealer information. Take a look at the JT Fax that meets your needs and see why JT Fax has been receiving such high praise. Quadram: One Quad Way, Norcross, Georgia 30093

CIRCLE 189 ON READER SERVICE CARD

WE DIDN'T INVENT REMOVABLE MASS STORAGE. WE SIMPLY PERFECTED IT.

NOT LONG AGO, removable mass storage was nothing more than documents and file cabinets. Businesses managed to keep track of information, but it wasn't easy. Then paper and steel gave way to computer-based systems like tape drives and floppy disks. An improvement, but primitive nonetheless. **ALONG CAME BEMOULLI™**, offering revolutionary internal and external mass storage solutions. Unlimited storage solutions with sturdy Bemoulli 5¼" and 8" Drives, and handy 10MB and 20MB removable Disk Cartridges. Just one 20MB Disk Cartridge has the stor-

age capacity equivalent to 5,250 pages or 59 floppy disks.

Today, the armed forces and financial institutions use Bemoulli as a safe way to store data and a speedy backup system. Utilities and medical institutions take advantage of Bemoulli when transporting large amounts of data between locations.

Graphics, CAD/CAM and desktop-publishing users are increasing storage without constantly replacing or adding expensive hardware. And PC users of all kinds are downloading files on Bemoulli instead of bogging down

their minis and mainframes.

OMEGA REIGNS SUPREME as the leader in removable mass storage.* No other removable mass storage device offers Bemoulli Technology™—the technology that makes head crashes virtually impossible. And no one can equal Bemoulli's long-standing reputation for customer service and support.

Add the versatility of single or dual drive, internal or external systems for IBM® PCs and compatibles, PS/2™ Micro Channel,™ and Apple® Macintosh™—and you have the time-tested, reliable mass storage solution for every application.

IN THIS NEW ERA of removable storage, Bemoulli is the name you should know. Start today by calling 1-800-922-9400.**

BEMOULLI TECHNOLOGY

*According to the 1987/88 "TRENDS" Report, storage capacity for 8 1/4" of higher 5 MB removable drive market. IBM is a registered trademark, and PS/2 and Micro Channel are trademarks of IBM Corporation. Apple is a registered trademark of Apple Computer, Inc. **In Utah call 1-800-922-9400.

OMEGA®
Never ending storage.

[illegible]

(SETMODE ASM (continue))

"Unlimited"

un·lim'i-ted, a. [L. limitus]: *The ability to expand your personal computer's storage capacity beyond your wildest imagination.*

Up until now, the concept of unlimited PC storage capacity was about as practical as cramming all your office files into your briefcase. Storage capacity could only be stretched as far as the fixed capacity of your hard disk. Or to the limit of your patience for shuffling through stacks of floppies.

But imagine instead that you could insert and remove hard disks as easily as a VCR cassette—your PC's storage capacity would then be virtually limitless.

That's exactly the idea behind the Tandon Personal Data Pac, the world's first and only

number of self-contained, portable Personal Data Pacs that can be inserted and removed as easy as a floppy. Now a whole business worth of software and data can fit neatly into your briefcase. Ready to go anywhere your business will take you.

And when you are done for the

day, your entire information base can be simply locked away where only you can get at it.

If you want to share your software and data with others, the Tandon Personal Data Pac offers you the cheapest and most reliable "network" possible. Simply

transfer what you need from one Pac to another, and turn a shared PC into a dedicated workstation, just for you.

If your travels with the Data Pac take you on a bumpy road, don't worry. Your software and files will be safe and secure inside the Pac's rugged housing. It can even take a trip in the mail or an occasional fall off your desk.

See your Tandon Dealer today or call us at 1-800-556-1234, ext. 171 (in California 1-800-441-2345, ext. 171) and learn the new definition for personal computing.

The possibilities are limitless.

Tandon

*We're redefining
personal computing.*

What's black & white & read all over?

The new Mitsubishi* mp286L laptop personal computer.

Until now, thinking portable meant thinking compromise. In readability. Or speed. Or power. Or expandability. Or all of the above.

But now the mp286L eliminates the compromises.

Its big, bright, black and white "page white" backlit 11" display is easy on the eyes. It's readable from several feet away. In virtually any light.

A powerful 80286 processor clocks in at 12MHz, and that's probably faster than the desktop computer you're now using.

The 20MB internal hard disk and options including a math co-processor, internal modem, extended memory, and numeric keypad, put to rest once and for all the popular notion that you can't take it with you. With the mp286L, you can even move up to MS OS/2*

But best of all, you don't have to compromise quality: the mp286L is built like a Mitsubishi: built to work long and work hard.

The mp286L is assembled in the U.S. for assured delivery and availability. Mitsubishi resellers are experienced specialists who provide systems support, training, and applications assistance you can count on.

Call toll-free: 1-800-556-1234 extension 25
(In California, 1-800-441-2345 extension 25) or
write: Mitsubishi Electronics America, Inc.,
Computer Systems Division, 991 Knox Street, Torrance,

COMPAQ

DESKPRO 386/20

UNLOCK ITS FULL 386 POWER WITH SCO XENIX 386 - NOW!

Under DOS, the COMPAQ DESKPRO 386/20™ is a powerful single-tasking, single-user system that can run thousands of DOS applications. In 16-bit, 8086 mode.

One at a time.

When OS/2™ software becomes available, this computer can become a multitasking, single-user system running in 16-bit, 286 mode that can also single-task those DOS applications under OS/2.

One at a time.

With DOS or OS/2, it will support one user—for the cost of the entire system.

Under SCO™ XENIX® 386, however, the COMPAQ DESKPRO 386/20 becomes a powerful multitasking, multiuser system that can run thousands of proven XENIX applications. In full-tilt, 32-bit, 386 mode.

Many at a time.

Using SCO VP/ix™ it can multitask all the same DOS applications under SCO XENIX.

Many at a time.

With SCO XENIX 386, this powerful computer can support multiuser configurations of 16, 32, or even more workstations with such blazing performance that individual users will believe they have the whole system to themselves—at an unbelievably low cost per user.

And the best news is that you can unlock the full power of the COMPAQ DESKPRO 386/20 today because you can get SCO XENIX 386—now!

SCO XENIX System V and the SCO XENIX family of software solutions is available for all industry-standard 8086, 80286, and 80386-based computers, and the IBM® Personal System/2™ Models 50, 60, and 80.

LAN's Best Friend

Dependable UPS systems from American Power Conversion support the new UPS monitoring functions of:

- /// Novell's SFT Level 2 NetWare™
- /// 3 Com's 3S/400 server
- /// Banyan's VINES™

Here's the American Power Conversion Advantage:

- /// Systems allow automatic, secure network shutdown during extended power outages.
- /// No supervisor intervention is required.
- /// Ideal for file servers which are sometimes unattended or attended by untrained personnel.
- /// Complete power protection from blackouts, sags, noise, and surges.

A broad range of UPS products covers all networking requirements:

- | | |
|---------|--|
| 330 XT | Low cost UPS protection for network workstations |
| 450 AT | For AT type servers, 3 Com servers, and CAD workstations |
| 520 ES | For SFT Level 2 and VINES file servers |
| 800 RT | For large file servers with multiple hard drives |
| 1200 VX | For multiple PC's or very long backup power duration. |

International models available. Inquire about our UPS application handbook.

gram is popped up, you'll see the current settings for up to four serial ports in the middle window (most PCs have only one or two installed). If you have an internal modem, it too will count as a serial port. Missing (or incorrectly installed) ports are indicated by "n/a" in the bps column.

To change a setting, use the Up and

Down Arrow keys to position the moving bar on the desired item. If more than one port is installed, the Left and Right Arrow keys are used. Press either the Plus or Minus key to change the item's value.

Four parameters can be set for each port: bits per second (bps), parity, number of data bits, and number of stop bits. Al-

though the RS-232 standard defines the technical details of the electrical interface, it allows many variations of the basic data format. Which settings will work is generally determined by the device which is connected. For example, most modems work at 1,200 or 2,400 bps, serial printers generally run at 9,600 bps. Both the PC

■ UTILITIES

and the remote device it is communicating with must use identical settings. For a more detailed discussion of RS-232 communications, see the sidebar "Speaking the RS-232 Language."

SETMODE also displays the current state of the Data Set Ready (DSR) line. This value is read from pin 6 of the standard 25-pin connector. A "Yes" indicates the attached device is connected and powered up (although not necessarily on-line). If you have an internal modem, the DSR should always be active. A "No" is a sign that no connection has been made or the remote device is not operating. You can use this feature to determine if your equipment is attached and working properly. Normally the DSR indication should be on when equipment is attached properly.

WORDS OF CAUTION Since SETMODE deals directly with the machine's hardware, it is a very powerful program. While nothing you can do with SETMODE can damage your hardware, if you use the program incorrectly you can send

your hardware into a tailspin. To prevent this from happening, you'll have to follow a couple of simple rules.

First, although SETMODE has enough smarts to keep you from switching to a video mode that isn't supported by your equipment, it won't prevent you from switching modes at the wrong time. To avoid problems, change modes only when at the DOS prompt rather than while running another program. Most software can't tolerate a video mode change and will revolt, either by doing nothing or by displaying garbage on the screen. When in doubt, selecting mode 3 for color monitors and mode 7 for monochrome should put things back to normal. These are the standard text modes and can be used by most software.

A second possible problem could arise if you pop up while a file transfer (which uses the serial port) is in progress. When SETMODE reads the communication port settings, it could interfere with the port's operation. Worse yet, if you changed the protocol parameters during a file transfer, the carrier signal could be disrupted. Again, making changes only when at the DOS prompt is recommended.

YOUR PERSONAL HOTKEY You can change the default Alt-M hotkey combination in one of two ways. If you have the program source code and an assembler, you can easily modify the equates for SHIFT_MASK and HOTKEY. Also change the text at label "COPYRIGHT" to display the new hotkey. Then reassemble and link the program and use EXE2BIN to convert the resulting executable file into the .COM format, as usual.

If you're starting with the .COM version of SETMODE, you can use DEBUG to make the changes. Values for the shift mask and scan codes can be found in Figure 3 and Figure 4, respectively. Notice the values are all in hexadecimal notation. The following example illustrates how to change the hotkey to Ctrl-X:

```
DEBUG SETMODE.COM
E 14C "Hotkey is Ctrl-X"
E 887 2D ;Desired Scan code
E 818 84 ;Desired Shift Mask
W
Q
```

Be sure to enter exactly 16 characters (excluding the quotation marks) in the line

Keyboard Scan Codes for Alternative Hotkeys

Key	Scan code in hex	Key	Scan code in hex
Esc	01	Z	2C
11	02	X	2D

Right Shift	2B	F11	57
		F12	58

Figure 4: If the key combination used to activate the program is not to your liking, it may be easily changed to another setting. You may choose a new hotkey from the table above and then substitute the scan code for the key in the program as directed in the article. This ability to change keys adds to the SETMODE program's flexibility.

SHIFT_MASK Value Table

SHIFT_MASK value	Shift key (● = Pressed)			
	Alt	Ctrl	Left Shift	Right Shift
0				
1				●
2			●	
3			●	●
4		●		
5		●		●
6		●	●	
7		●	●	●
8	●			
9	●			●
A	●		●	
B	●		●	●
C	●	●		
D	●	●		●
E	●	●	●	
F	●	●	●	●

Figure 3: The combination of shift keys needed to pop up the program corresponds to a unique SHIFT_MASK value. Use this value when altering the program's default activation keys as explained in the article.

The Most Important Question You Should Answer Before Buying Any Single User Accounting Software Program.

As your business grows you need to add more integrated terminals to your system. Will your accounting software program have upgradeability to 3.1 DOS with complete record and file locking functions?

Multituser processing is a completely different environment than the single user. The vast majority of single user accounting software programs are incapable of upgradeability to complete record and file locking functions. COUGAR MOUNTAIN'S ACT 1 was designed from inception to have upgradeability to 3.1 DOS, giving you unlimited growth potential. All data files are automatically upgradeable to the multituser version.

ONLY
\$139.50

Plus \$11.50 Shipping & Handling

ACT 1
Awarded

Here's more reasons why ACT 1 has become the industry standard and why thousands of users are selecting, and changing to, ACT 1.

GENERAL FEATURES

"LOOKUP" Windows throughout.
Menu driven with 2 help references.
Multi company and report generator.
Sample data files included.
Complete audit trail.
All modules can post to multiple profit centers.
User defined financial reports.
User can design checks, invoices, statements & W-2s.
User defined chart of accounts, account numbers & stock numbers up to 15 alphanumeric.

GENERAL LEDGER

Allows for multi company ledgers.
Unlimited multi-level accounts for departmentalized reporting.
Allows recurring journal entries.
User can process transactions 2 periods into next year.
Allows budgeting.

ACCOUNTS RECEIVABLE

Open invoice and/or balance forward.
Allows unpaid payments.

Prints statements.

Handles recurring accounts receivable.
Supports partial payments & finance charges.
Allows unpaid credit memos.
Up to 5 user-defined aging periods.
Mailing labels & reports with 7 different sorts.

INVENTORY

Supports: LIFO, FIFO, weighted averages & standard cost.
Supports markup, margin or list.
Allows up to 4 places to right of decimal for unit cost & price.

SALES INVOICING

Supports service or product oriented businesses.
User defined tax tables including multiple sales taxes.
Prints packing slips.
Prints invoices.
Alerts user to customer exceeding credit limit.
Sales history reports.
Automatic updating of inventory daily.
Allows return credit memos.

ACCOUNTS PAYABLE

Can post to 200 general ledger expense accounts per invoice.

Prints checks.

Automatically prepares payments.
Supports partial and handwritten checks.
Processes credit and debit memos.
Computes discounts and records discounts taken.

PAYROLL

Generates automatic payroll.
Provides up to 8 user-defined rates.
Allows post facto payroll.
Allows distribution of payroll expenses to user-defined departments.
Benefits and deductions are calculated on fixed amounts.
Hourly amounts, percentage of gross or variable.
Allows additions to gross which may be taxable, non-taxable or partially taxable.
Handles 401K & cafeterias.
All tax tables easily updated by the user.
Handles payroll draws, per diem pay, contract & piece work, hourly and salary.
Handles tip accounting.
Prints checks and W-2s.

HARDWARE REQUIREMENTS

IBM PC or compatible. **HARD DISK REQUIRED.**

TO ORDER CALL (800) 344-2540 8:00-5:00 MST Monday-Friday

UNCONDITIONAL 30 DAY MONEY BACK GUARANTEE

applicable on all products bought directly from COUGAR MOUNTAIN SOFTWARE.
Products must be returned in resalable condition.
Restocking fee applicable.

ACT 1 series is UPGRADEABLE to ACT 2 series which is multituser for LANs & Networks. Data files are automatically upgradeable.

Trademarks:

Hayes.

■ UTILITIES

SETMODE BY MODEM

The programs published in *PC Magazine* are available by modem from PC MagNet, an on-line service through which readers can discuss the columns with the editors.

To join PC MagNet, set your communications software for either 300 or 1,200 bps, 7 data bits, even parity, 1 stop bit, and full duplex. You can use any of more than 300 local access phone numbers, including: Boston, (617) 542-1796; New York, (212) 422-8820; Chicago, (312) 693-0330; or San Francisco (415) 956-4191. To find the number nearest your dialing exchange or for 2,400-bps service, connect with PC MagNet and type GO PHONES. For Customer Service, call (800) 848-8990; in Ohio and outside the United States, call (614) 457-8650.

When you connect with PC MagNet, press Ctrl-C. At the USER ID prompt, enter 177000,5000. Enter PC*MAGNET at the PASSWORD prompt and enter Z10D8813 at the ENTER AGREEMENT NUMBER prompt.

PC MagNet costs \$12.50 an hour for 1,200/2,400-bps service and \$6 for 300 bps, via MasterCard, VISA, or American Express. There is no additional charge for downloading source code or compiled programs from PC MagNet. These programs can be copied, but are copyrighted and are made available only for noncommercial use. You may make copies for others as long as no charge is involved, but making copies for any commercial purpose is strictly prohibited.

SETMODE.COM is already compiled and ready to run. SETMODE.BAS will automatically create SETMODE.COM when run once in BASIC. SETMODE.ASM allows you to modify the program, but requires you to use a macro assembler (IBM or Microsoft, Version 2 or later) and the following commands:

```
MASH SETMODE;
LINK SETMODE;
EXE2BIN SETMODE SETMODE.COM
```

Photocopy this page. Trim and hole-punch the copy and add it to your DOS manual.

Tom Kihlken

Purpose:

Provides menu-driven setup and change of video modes and communications parameters.

Format:

[d:] [path] SETMODE

Remarks:

SETMODE is a memory-resident utility that may be loaded either at the DOS prompt or by being included as a line in an AUTOEXEC.BAT file. It takes no parameters. Its default hotkey is Alt-M, and it will pop up in either text or graphics mode.

The SETMODE window displays the current settings (bps, parity, data bits, stop bits) for up to four installed serial ports. Settings can be changed by moving the bar menu highlight to the desired parameter with the cursor arrow keys and using the Plus or Minus key to increment or decrement the value. Pressing either Esc or Enter removes the SETMODE screen and implements any communications parameter changes. The status of the Data Set Ready (DSR) line is also shown in the window, though it cannot be changed through SETMODE.

The current video mode is also displayed in the SETMODE pop-up window and can be changed by moving the menu bar to the desired mode and pressing Enter. Note that modes not supported by the display adapter(s) in the user's system cannot be selected. When a video mode change is made, the screen is left blank; pressing Enter a second time will restore the normal prompt.

Note: Although SETMODE will pop up over most existing applications, video mode changes should normally be made only from the DOS prompt, as many programs will crash if the mode is changed while they are running. Similarly, changes in communications protocols should not be made while a file transfer is in progress. Text characters beneath the SETMODE window are preserved if the mode is left unchanged, but graphics images are not.

Instructions for changing the default Alt-M hotkey are contained in the article.

SETMODE Command

1988 No. 13 (Utilities)

■ UTILITIES

that begins with "Hotkey is." If necessary, you should pad the string with blanks. It would be a good idea to keep a copy of the original program before modifying it with DEBUG. If you make a mistake, just enter "Q" to quit DEBUG and start over.

INSIDE THE CODE Now that we've seen what SETMODE does, let's take a look at how it works. From a programming standpoint, the logic is fairly simple. There are two main sections: the initialization routine and the resident portion. The very first instruction of the program contains a jump to the initialization portion, which can be found at the end of the program. Since the initialization routine is only

neced once, it is later overlaid by the window buffer.

As usual, the first step is to determine if the program is already installed. Loading multiple copies of the same resident program would cause havoc with the system. A search through the computer's memory will reveal any existing copies, and if one is found the program simply terminates with an exit code of 1. Otherwise the installation continues by testing for the various display adapters (I'll explain how this is done shortly).

Two more steps are required before the program is ready to become a resident part of your system. First, the keyboard interrupt vector must be intercepted, to permit detection of the hotkey combination. DOS

provides function calls that make this easy. Function 35h returns the current vector, and we save this address so we can JMP to it later. The new segment and offset are then placed into the vector table with function 25h. Second, before terminating, we release the memory occupied by our copy of the environment. We'll have no need for it and DOS can make use of it later.

The special terminate-and-stay-resident function is then used to return control to the operating system. A return code of 0 is passed back to indicate the installation was successful. The amount of memory reserved is just enough for the resident code and the window buffer. The window buffer is sized to hold the underlying display of 18 rows of 40 columns. Two bytes are re-

SPEAKING THE RS-232 LANGUAGE

Getting the protocol values correct is one of the most troublesome chores when communicating with serial devices. The data being transmitted consists of a series of carefully timed electrical signals. These signals are generated by a universal asynchronous receiver/transmitter (UART), which, in the IBM PC, is an Intel 8250. This chip converts a single byte of data into the required electrical pulses and provides several control signals that may be read and set by the system microprocessor.

Although the RS-232 standard has specified most communications parameters, there are still many possible protocols available. Both transmitter and receiver must obey the same timing rules for a successful transfer of data. To fully understand the required settings, here is a short course in asynchronous data transmission.

In asynchronous communications, the transmitter can send a word whenever it wants: it does not have to be locked in step with the receiver. Each word transmitted consists of a start bit, data bits, and framing bits. The exact format can be controlled by the communications software and is commonly known as the protocol. The layout of the series of

pulses is shown in Figure A below.

The start bit is used to indicate when a word of data is about to arrive. When no data is flowing, the line is held in a mark state. Since an asynchronous system allows words to arrive at any time, a start bit is required to synchronize the timing of both systems. The data bits follow immediately thereafter, each one spaced one bit time apart. The common data formats utilize 7 or 8 bits in each word, though the UART itself allows anywhere from 5 to 8. If you hear about file transfer programs that can't send "high" bit characters, it's almost certainly because they use a 7-bit data format.

Following the data, the parity and stop bits are added. Logically enough, the stop bit marks the end of a word and returns the line to the idle state. The parity bit is generated by the UART hardware and can be used to detect transmission errors. This bit can be used in any one of five distinct ways: even, odd, mark, space, and none. When even parity is used, the parity bit is adjusted so that each word contains an even number of 1-bits. Odd parity is just the opposite. With mark parity the bit is always set, and with space parity it is always zero. No parity indicates the bit is missing entirely. Although parity allows the UART hard-

Schematic of Serial Data Transmission

Figure A: A series of signals such as these are generated by the UART to transmit each byte through the serial port.

quired for each character—one for the character itself, the second for the attribute.

The resident code consists of two main procedures: the interrupt service routine for the keyboard, and the SETMODE routine itself. The purpose of the keyboard handler is straightforward. It examines every keystroke, comparing the scan codes with the selected hotkey. When a match is found, it checks the state of the shift, Ctrl, and Alt keys to determine if the correct one is also depressed. If not, control is passed to the original keyboard routine. When the correct hotkey combination is found, the keyboard is reset and all the registers are pushed on the stack (interrupt routines must always preserve the processor state).

The main logic routine SETMODE is then called.

The first step in building the window is to save the cursor location (we'll be moving it about the screen to read and write characters). Then the underlying characters are read from the screen as the window is constructed. First, the border is drawn and the center filled with blanks. The text is added next. The two routines SHOW_PORTS and SHOW_MODE are then called to fill in the current settings of the system. The last step before soliciting a keystroke is to place the moving bar on the current item. Creating the moving bar is accomplished by reading the affected characters from the screen and writing them back with a new attribute.

The BIOS read keyboard routine is used to wait for the next keypress. When it arrives, we compare it with the seven possible command keys (Plus, Minus, Esc, and the four cursor arrows). If it doesn't match, we simply ignore it and wait for another key. Otherwise, the moving bar is erased (it will be replaced shortly) and the appropriate logic routine is called to process the command.

When an arrow key is pressed, several checks need to be made before moving the bar. Before a new video mode can be chosen, the bits in ADAPTER_FLAGS are ORed with a table to determine if the required adapter is present. If the result is zero, the mode is skipped and the bar moves to the next selection. The result is that only modes supported by the available hardware are allowed. A similar test is made when moving from one communications port to the next. The bar can be moved only if a valid port address is found in the BIOS data area.

When Enter is finally pressed, the original window is copied back to the screen. Next, the selected video mode is compared with the starting mode. If it's different, a mode change is required. To cause a mode change requires reprogramming a number of registers in the CRT controller chip. Gathering all the required data to do this for each adapter would have been a programmer's nightmare; luckily, the BIOS provides services that make it easy. The desired mode number is placed in register AL. AH is set to zero, and an interrupt 10h is executed. An extra step is required to accommodate multiple display adapters.

The BIOS maintains a word at address 0040:0010 that contains the equipment list. Bits 4 and 5 specify what type of display is attached. The initial value for these is read from the DIP switches on the motherboard when the machine boots. Normally, with only one display adapter, they need never change. But when two adapters are present, the equipment list must correctly indicate which display is active. SETMODE uses the OR instruction to place the correct value into this word each time it changes the mode.

THE PROGRAMMER'S NOTEBOOK

When programming in assembly language, there are always a number of interesting

ware to detect line errors, it is in fact seldom used. Instead, more-advanced error detection and correction is done through software. When software error detection is used, the parity bit is normally omitted to reduce transmission overhead.

The number of bits per second indicates the speed of the data link. To send a byte of data normally requires about 10 bits (including the start and stop bits), so the effective throughput for a 1,200-bps signal would be 120 bytes per second. Not long ago 1,200 bps was considered high speed. Today, 9,600-bps modems are available, and PC-to-PC communications using a direct connection can run even faster. On the PC and AT the maximum rate supported by the basic input output system is 9,600 bps. The new PS/2 machines have increased this to 19,200 bps. SETMODE allows you to set values up to a maximum of 115,200 bps, which is the absolute highest rate that can be programmed into the UART. Your modem probably won't be able to run that fast, but it is possible for it to conduct PC-to-PC communications at that speed. You'll need a high-performance communications software package and a null modem cable to connect the two serial ports.

To program the desired line settings, SETMODE must correctly set the internal registers of the UART. These registers are mapped into ports that are accessible to the central processor with IN and OUT instructions. Each communications adapter is assigned a unique series of port numbers, which are defined by the base address of the first register. The base address of each installed adapter can be found in the BIOS data area starting at address 0040:0000. Normally, the first serial port adapter is installed at address 3F8h and the second at 2F8h. If you've ever had to move a jumper on a serial port adapter board, these are the values that are affected.

When the UART starts sending, the data is transmitted on one of the 25 pins of the RS232 connector (the AT utilizes a 9-pin connector). A second pin is used for incoming data. Other pins can be used for various control signals but are not required for simple communications. The only one of interest here is the data set ready (DSR), which is an input to the PC. A modem raises this line to indicate it is ready to receive data. SETMODE reports the state of the data set ready line with either a Yes or a No.

—Tom Kihlken

adapter's video buffer (at segments B000h and B800h) is examined. First, the byte at offset 0 is read and stored. Next the binary value 55h is written to the same location. After a short delay (to allow sufficient time for the display memory to react) the byte is read and compared with 55h. If it matches, a video adapter is assumed to be installed. The original value is then restored so that the display remains unaltered.

The method outlined in the IBM BIOS Interface *Technical Reference* manual is used to test for the presence of a MCGA, VGA, and EGA. First, to test for the VGA, we issue INT 10h with AX equal to 1A00h. This function reads the display combination code. If AL is not still equal to 1AH on return, there is no MCGA or VGA in the system. Otherwise, the value returned in register BL determines which display is in use. Similarly, to determine if an EGA is present, the EGA information function is used (INT 10h is issued with

AH equal to 12h and BL equal to 10h). If, on return, BL is still equal to 10h, there is no EGA in the system.

Another interesting problem arose in connection with displaying the bps setting of the serial ports. This value is set by loading a divisor into the UART's registers. The UART converts the divisor into bps using the equation

$$\text{bps} = 115200 / \text{divisor}$$

For a 16-bit processor, division with a number of this magnitude is no problem as long as the result is no greater than 65,535 (64K). But what if the bps rate is set greater than this? A divide overflow would result, producing a type 0 interrupt. This would then require special consideration, since it occurs from within a resident program. A little high school algebra eliminates the problem completely, however. Since we know all a normal bps rate is a multiple of 10, we divide the numerator by

10 and thus use 11,520 instead of 115,200 in the above equation. To produce the correct answer, the result is then simply multiplied by 10, i.e., a zero is appended to it.

One last consideration is needed in the above operation. Suppose the bps divisor was set to zero? (Inadvertently dividing by zero has long been a trouble area when evaluating mathematical equations.) The result of the division would be undefined and an interrupt 0 would be executed. To preclude this possibility a special test is made, and if SETMODE finds a divisor of zero, the division is simply not performed.

If your experience with the MODE command has been one of love and hate—with more of the latter—you now have an alternative. SETMODE can at least give you a fighting chance in the war between you and your peripherals.

Rapid letters. Rapid File.

Calligraphers Guild of America

22 Wilson Penn Avenue • Pittsburgh, Pennsylvania 15202

March 1, 1988

MEMBERSHIP
OFFICE
CITY, STATE ZIP+4

Dear MEMBERSHIP

We're pleased to announce that the Calligraphers Guild will be moving here to go through the exciting work of creating the members list.

From now on, all our mailing work will be done by RapidFile. The files we use are made up of the last, first, middle, surname and city, state, zip code. We use the data from the membership reports we file with you every month with RapidFile.

RapidFile includes automatic mailing label generation, and generates the data a computer system needs to print the labels. It also includes a database of all our members and their addresses. It's a powerful tool for managing your data.

Best of all, RapidFile is a new and a 40,000-member mailing database, a 470,000-member database and 10 new mailing labels.

And if you want more power, we can back up to 65,535 with Ashton-Tate's special RapidFile upgrade pricing.

RapidFile is a new power price made in one week. It's a new power price made in one week. It's a new power price made in one week.

Sincerely,

Calligraphers Guild President

GENERIC ANNOUNCES NEW LEVELS OF CADD SOFTWARE

BECAUSE ONE SIZE NEVER FITS ALL!

It's gotten to the point where software is either too underpowered to get the job done or too complicated to use.

That's why we've developed new Generic CADD Levels software. Three different programs for IBM® PCs and compatibles that let you choose the level that fits your needs *exactly*.

What if your needs change? Just move up to the next level. Since every level works the same way, once you learn one it's easy to learn the next one.

GENERIC CADD LEVEL 1™

is just right if you're getting into CADD. It's an amazingly powerful package for only \$49.95*. Yet it's simple to use and it can run

on a two-floppy system.

GENERIC CADD LEVEL 2™

adds enhanced editing capabilities like automatic English or Metric dimensions, extension lines, arrows, and single line snaps and trims—all for \$99.95*. Level 2 is perfect when you need a little more performance.

GENERIC CADD LEVEL 3™

is our fully featured package. Its advanced features include hatches and fills, poly line snap and trim, dynamic drag, macros, and EMS support for bigger drawings. This professional program has everything you need if you work with CADD every day. And you

*Suggested retail price

get all these features for just \$199.95*.

Send for our free CADDalog®

To find out more about our new Levels software—as well as other Generic products—call or write for our free CADDalog.

Call 1-800-228-3601.

Or write Generic Software, 8763 148th Avenue NE, Redmond, WA 98052.

INTRODUCING THE OS/2 PRESENTATION MANAGER

Here's a first look at OS/2 1.1, whose graphics-based interface sets standards for ease of learning and use for the next generation of application programs.

*"The time has come," the Walrus said,
"To talk of many things:
Of messages and window procs,
Resources, menus, strings,
And how to use a dialog box
To make your programs sing."*

In other words, my friends, the OS/2 Presentation Manager has arrived.

Paraphrasing Lewis Carroll on this occasion is certainly appropriate. The Presentation Manager is a wonderland of new ideas and concepts that, initially, can be disorienting and even a little scary. This is a system with its own architecture, its own vocabulary, its own Weltanschauung.

In this issue's column we'll take our first brave steps through the looking glass into the OS/2 Presentation Manager.

WHAT IT IS The Presentation Manager is part of OS/2 1.1, which is scheduled for retail availability from IBM in October 1988. Other computer manufacturers (such as Compaq and Zenith) are expected to license OS/2 1.1 from Microsoft and adapt it to their own hardware.

As with OS/2 1.0, Microsoft has made a preliminary beta-test version of the operating system available to programmers as part of its \$3,000 OS/2 Software Development Kit (SDK). The beta version of the Presentation Manager was originally scheduled for shipment in December 1987 but was not shipped until April 1988. The Presentation Manager program that I'll show in this issue (and those in the next couple of Environments columns) is based on this April beta-test release. Keep in

mind that there undoubtedly will be some changes in the Presentation Manager over the next few months that may affect these programs.

The Presentation Manager is a graphics-based multitasking windowing environment that looks and feels much like its DOS counterpart, *Microsoft Windows*, Version 2.0. This type of graphical interface (sometimes also called a "visual interface") incorporates menus, dialog boxes, scroll bars, buttons, and other objects that facilitate user input through the key-

board or a pointing device such as a mouse. The menu and dialog box interface is consistent across applications. Users often find that such an interface is easy to learn and use.

Figure 1 shows a typical Presentation Manager display. (It looks better in color.) The screen serves as a desktop. Each program occupies a rectangular area (called a window) on the desktop. The program is identified by a title bar across the top of the window. To the left of the title bar is a small box that invokes the drop-down sys-

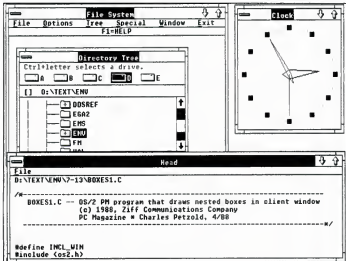

Figure 1: A typical Presentation Manager display.

■ ENVIRONMENTS

tem menu. The options on the system menu are generally the same for all applications. To the right of the title bar are two arrows. The arrow pointing up is used to "maximize" the window so that it fills the whole screen. The arrow pointing down is used to "minimize" the window so it occupies a small area at the bottom of the screen. The entire window is surrounded by a sizing border for changing the size of the window.

Below the title bar is the applications main menu (if the program uses a menu). Each option on the main menu invokes a drop-down menu. Some menu items invoke a dialog box, which is a smaller window containing "controls" such as buttons, check boxes, text entry fields, and list boxes.

The Presentation Manager (and programs running under it) occupy one OS/2 session. You can run OS/2 1.0 full-screen applications in other sessions and switch among the sessions. Most OS/2 1.0 applications will also run in a window under the Presentation Manager.

You can think of OS/2 1.1 as supporting two distinct and very different environments. The OS/2 kernel (which is part of both OS/2 1.0 and OS/2 1.1) is mostly for traditional character-mode applications that display output in a teletype fashion or use the full screen. The Presentation Manager is a more modern graphical windowing environment.

WHERE IT CAME FROM Of course, graphical windowing environments are not new. They were first developed in pioneering work done at the Xerox Palo Alto Research Center (PARC) beginning in the mid-1970s with machines known as the Alto and Star.

Windowing environments entered the personal computer arena in January 1983, when Apple Computer introduced the Lisa. The Lisa flopped, but a year later Apple introduced the Macintosh, which has proved to be very successful.

On the DOS and PC front, two graphical windowing environments were released in 1985: *Microsoft Windows* (originally announced by Microsoft in November 1983) and Digital Research's *GEM*. *Windows* was more successful than *GEM* in attracting PC software develop-

ers, but *GEM* met with some success on machines other than the PC, such as the Atari ST. Windowing environments have also shown up on other low-end personal computers, such as the Commodore Amiga and the Apple IIGS.

On the higher end of the small computer spectrum, workstations such as those developed by Sun Microsystems also run graphical windowing systems. Sun's major environments are called *SunWindows* and *SunView*. *SunView* runs under Unix on Sun's new 80386-based machine.

In the 1990s the typical computer display will present a graphical windowing environment. All the systems I've mentioned look a little different, yet from a user's perspective they are fundamentally quite similar. You can sit down with an application under any of these environments, use the mouse to explore the menus, and soon begin working.

This is quite surprising—somehow the computer industry has settled upon something like a standard in user interface design. Despite the recent bizarre look-and-feel lawsuit initiated by Apple (whose lawyers apparently believe the graphical interface was invented in Cupertino, California), windows are here to stay.

IBM in particular has big plans for the

Presentation Manager. The Presentation Manager forms one of the cornerstones of Systems Application Architecture (SAA), which is an attempt to standardize user interfaces and application program interfaces (APIs) across IBM's entire line of computers. If this comes to pass (and some people feel it is crucial to IBM's long-term survival), the Presentation Manager interface will be a common sight to users of all IBM computers.

HOW DOES IT KNOW? The first time I saw a windowing environment, I was baffled by how it worked. One common demonstration showed how a window could be resized by the user. The strange thing was that some applications would adjust the contents of the window to the new window size. An analog clock would grow or shrink to the largest size the window could accommodate. A window displaying text would use a different right margin for word wrap.

I knew that the logic for resizing the windows was obviously built into the operating system rather than being duplicated by each application. That made a lot of sense to me. But after the window was resized, how did the program know that the window size had changed?

    }

    return FALSE;
}

```

(Figure 2 ends)

Think about it. Suppose you're running a DOS spreadsheet program in character mode on an EGA. Suddenly some deviant RAM-resident program calls interrupt 10h in the PC's BIOS to switch to a 43-line mode. Will the spreadsheet program suddenly use 43 lines? Of course not! The program has no way of knowing the video mode has been changed unless it checks the BIOS.

But these windowed programs apparently knew when the window was resized without being involved in the resizing itself. The programs were getting information from the operating system through some mechanism that didn't fit into the framework of any programming language or operating system architecture with which I was familiar.

IT GETS A MESSAGE! It turns out that the question "How does it know?" is an important one. The answer is central to the architecture of windowing environments in general and the Presentation Manager in particular. It's actually quite simple: the Presentation Manager sends a "message" to the application. In this particular example, the message says: "Hey, app, I've just allowed the user to change the size of your window. You might want to take that into account the next time you redraw the window contents."

A Presentation Manager program learns of many external events through messages. Keystrokes are translated into messages; so are mouse events. When a user makes a menu selection, the menu sends a message informing the program of the selection. When the user pushes a button on a dialog box, the button sends a message saying it was pushed. Basically, all that a Presentation Manager program does is receive messages and process them.

Of course, this sounds very strange initially. How can a menu "send a message"? What's really going on? What does that mean in terms of code?

Maybe it's time to look at some code. Figure 2 shows a small Presentation Manager program called BOXES1. Like most Presentation Manager programs, it is written in C. When compiled, BOXES1 displays the series of nested rectangles shown in Figure 3. BOXES1 adjusts their size and

Take a peek at Genoa's new PC graphics add-ons.

You've known Genoa as a developer of high performance graphics chips, and a leading manufacturer of graphics boards and tape backup. Soon you'll be able to depend on us for all your PC graphics add-on hardware.

Over the next year, we'll be unwrapping a series of graphics products. Each is designed to give you the most reliable, yet innovative engineering features. And above all, the highest performance possible.

Our SuperVGA HiRes family, featured here, is the first in our new product series. SuperVGA HiRes offers breathtaking color and resolution. From 16 colors in 1024x768. Up to 256 colors in 800x600. You'll see more of your spreadsheets at once with SuperVGA HiRes. 132 columns and 60 rows. You'll do Windows or OS/2. In fact, every SuperVGA HiRes feature is designed to turn your IBM PC/XT/AT and PS/2 models 25 and 30 into real graphics engines.

Delivering SuperVGA HiRes™ now!

- 100% IBM VGA compatible
- Advanced features
 - 1024x768 in
16 colors and
800x600 in
256 colors/Model 5200
 - 512x512 in
256 colors/Model 5100
- 132 columns text
- For both analog and
TTL displays

If you're looking for PC graphics add-ons, take a look at Genoa first. Our new line of products is starting delivery now!

■ ENVIRONMENTS

shape to the window size. Figure 4 shows multiple copies of BOXES1 running under the Presentation Manager, each in a different size of window.

THE HEADER FILES At first glance, BOXES1.C does not even look like a C program. Presentation Manager programs tend to be API-intensive. They use lots of special data types, identifiers, and functions that aren't part of C at all.

Near the top of BOXES1.C is the preprocessor statement

```
#include <os2.h>
```

This statement brings in 12 more C header files besides OS2.H that total about 256K.

The header files include function declarations for all 220 function calls in OS/2 1.0 (functions with the Dos, Vio, Kbd, and Mou prefixes) and for another 520 function calls added by OS/2 1.1.

These 520 new functions calls are mostly for the two major components of OS/2. The first component is devoted to the windowing and user interface functions. (This is the component that was derived largely from *Microsoft Windows 2.0*.) The 250 functions in this component begin with the prefix Win.

The second major component of the Presentation Manager is a device-independent graphics system called the Graphics Programming Interface (GPI). GPI is derived largely from IBM's Graphical Data Display Manager (GDDM) and the 3270 Graphics Control Program (GCP). The 230 GPI functions have the prefix Gpi.

Presentation Manager functions names use mixed upper- and lowercase and are often quite descriptive. OS/2 trivia: The longest OS/2 function name is 30 characters long. There are three functions of this length:

```
gpiDeleteElementsBetweenLabels  
gpiQuerySegmentTransformMatrix  
gpiQueryViewingTransformMatrix
```

BOXES1.C uses a small fraction of these 740 function calls, specifically the 12 Win functions and 2 Gpi functions shown in Figure 5. I'll describe these 14 functions in more detail below.

The header files also define many new data types and structures. These use upper-case identifiers. Figure 6 shows the Pre-

sensation Manager data types used in BOXES1.C.

Some of these new data types are rather simple and self-explanatory. (For example, SHORT is a signed short integer.) But

using these data types rather than normal C data types should allow programs to be more easily ported to the 80386 version of OS/2 and also to be ported to versions of the Presentation Manager that run on ma-

Figure 3: BOXES1 running under the Presentation Manager.

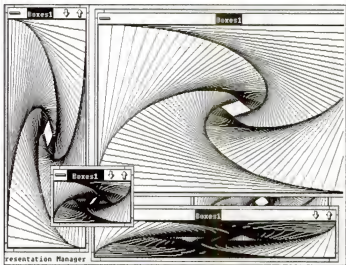

Figure 4: Multiple copies of BOXES1 running under the Presentation Manager.

■ ENVIRONMENTS

chines other than personal computers.

The header files also define lots of identifiers that lessen the use of numeric constants in your programs. I've counted (not by hand!) about 2,400 #define statements in the 13 OS/2 header files. Those used in BOXES1 are shown in Figure 7.

Most OS/2 identifiers begin with a short prefix (such as FS) that indicates a large group of identifiers ("frame styles"). You aren't required to use these identifiers, of course. For example, you could use the number 35 rather than the identifier WML_PAINT. But which would you prefer to remember?

The header files also define some helpful macros. Two of these macros, SHORT1FROMMP and SHORT2FROMMP, are used in BOXES1.C.

The distinctive "look" of Presentation Manager C code also results from the prevalent use of a variable naming convention called "Hungarian notation" in honor of the legendary Microsoft programmer, Charles Simonyi. Basically, the first few lowercase letters of a variable name identify the type of the variable. SHORT variables are given a prefix of s (for example, sRep and sSide in BOXES1.C); HWORD variables are given a prefix of hword (such as hwordFrame and hwordClient). Again, you aren't required to use Hungarian notation, but it's a big help in eliminating code errors before they become bugs.

PROGRAM ENTRY POINT As with a normal C program, the entry point to a Presentation Manager program is a function named main. The code shown in the main function of BOXES1.C is fairly normal. You'll see similar code in virtually every Presentation Manager program.

The WinInitialize function at the beginning of main registers the program with the Presentation Manager. You call WinInitialize before calling any other Presentation Manager function. The function returns a number known as an "anchor block handle." This handle uniquely identifies your program. Before the program terminates (at the end of main in BOXES1.C), the call to WinTerminate releases the anchor block handle.

The WinCreateMsgQueue function creates a "message queue." The Presentation Manager uses the message queue to

store messages for all windows created by the thread that calls the function. The function returns a handle to the message queue. Before the program terminates, it calls WinDestroyMsgQueue to destroy the message queue.

MORE THAN ONE WINDOW The WinCreateStdWindow function creates a standard application window. Until now I've been using the word "window" rather loosely to refer to the area that an application occupies on the screen. Actually,

Presentation Manager Function Calls

Function name	Description
GpiMove	Move current position for subsequent graphics drawing
GpiPolyLine	Draw series of lines starting at current position
WinBeginPaint	Get presentation space handle during WM_PAINT message
WinCreateMsgQueue	Create a message queue
WinCreateStdWindow	Create a standard frame window with child windows
WinDefWindowProc	Default message processing
WinDestroyMsgQueue	Destroy a message queue
WinDestroyWindow	Destroy a window and its children
WinDispatchMsg	Send a message to window procedure
WinEndPaint	Release presentation space handle during WM_PAINT message
WinGetMsg	Get the next message from the message queue
WinInitialize	Initialize Presentation Manager facilities for use by program
WinRegisterClass	Register a window class based on a window procedure
WinTerminate	Release Presentation Manager facilities before program ends

Figure 5: The Presentation Manager functions used in BOXES1. The function calls used in BOXES1 illustrate the new declarations supporting the two major components of OS/2: the Graphic Programming Interface and the windowing and user interface.

New Data Types and Structures

Presentation Manager data type	C data type	Description
CHAR	signed char	Signed 8-bit value
EXPENTRY	pascal far	Exported entry point
HAB	void far *	Handle to an anchor block
HMQ	void far *	Handle to a message queue
HPS	void far *	Handle to a presentation space
HWND	void far *	Handle to a window
MPARAM	void far *	Message parameter
MRESULT	void far *	Message result
POINTL		Graphics point structure
QMSG		Queue message structure
SHORT	signed short	Signed 16-bit value
USHORT	unsigned short	Unsigned 16-bit value

Figure 6: The data types used in BOXES1 and other Presentation Manager programs make these programs easier to port to different versions of OS/2.

Our Standard Is Loaded.

When people asked for a 24-pin dot matrix printer that could handle just about anything, we went straight to work.

And we came back with four of them. The Toshiba P321SL, P321SLC, P341SL and P351SX. And we put in more useful features

than any other printers in their class. Our fan-fold bypass, for instance, lets you print single sheets without having to unload your continuous form paper from the built-in tractor. And our simplified front panel makes printing as easy as touching a button.

There's even an optional automatic envelope feeder on our P351SX. All of which improve

the way you handle paper. To improve the way you look on paper, our multistrike film ribbon produces dark, crisp type, no matter which model you buy. Our 360x360 dpi graphics offer a higher resolution than most laser printers. And you can do it all in color with our P321SLC. Or our P351SX with its optional color kit.

Also standard is a wide array of resident fonts and emulations for virtually all software. Not to mention our unsurpassed 24-pin print quality. All with a speed of up to 360 cps for draft and 120 cps for letter quality.

So call 1-800-457-7777 for the name of the Toshiba printer and computer dealer nearest you.

You'll find our input does wonders for your output.

■ ENVIRONMENTS

WinCreateStdWindow creates several windows, and what we think of as a program's main window on the screen really comprises these several windows. A window, as we'll see, is more precisely defined as an object that processes messages.

The title bar is a separate window. The program's menu bar, the system menu box at the left of the title bar, the minimize and maximize arrows to the right of the title bar, and the sizing border are all separate windows. A dialog box is a window. So is every button, scroll bar, and text entry field in the dialog box.

The WinCreateStdWindow function always creates a "frame window," which is the base on which the other windows are assembled. The creation of other windows is governed by the presence of identifiers beginning with FS ("frame style") in the second parameter to the function.

The FS_SIZEBORDER identifier indicates that the Presentation Manager should create a sizing border. This window is the same size as the frame window, but only the outer edges of the window are made visible. The FS_TITLEBAR identifier causes a title bar window to be created. The WinCreateStdWindow parameter described by the comment "title bar text" is the text that appears in the title bar. The

FS_SYSMENU identifier directs the Presentation Manager to create a system menu; likewise, the FS_MINMAX identifier causes the creation of the minimize and maximize arrows.

Each of these windows processes keyboard and mouse input in its own unique way. By pressing the mouse button while the mouse pointer is positioned over the title bar, you can move the application's window around the screen. By pressing the mouse button while the pointer is positioned over the sizing border, you can change the window size. The WinCreateStdWindow function also creates an important window—the "client window." This window encompasses the entire area bounded on the left, right, and bottom by the visible part of the sizing border and on the top by the system menu, title bar, and minimize and maximize arrows.

The WinCreateStdWindow returns a handle to the frame window. You use this handle—a unique ID number—to refer to the window in subsequent Presentation Manager functions. In BOXES1.C, this handle is stored in `hwndFrame`. The function also returns a handle to the client window, which is stored in `hwndClient`.

Toward the end of `main`, before the program terminates, BOXES1 calls Win-

DestroyWindow to destroy the frame window. Destroying the frame window also destroys the other windows that were created with the frame window during the WinCreateStdWindow function.

THE MESSAGE LOOP Like all Presentation Manager programs, BOXES1 creates a message queue by calling the WinCreateMsgQueue function. A program must create a message queue before it creates a window. The presence of the message queue is what truly differentiates a Presentation Manager program from an OS/2 kernel program. The message queue is used mostly for storing keyboard and mouse input to all windows created by the program. This code in `main`

```
while (WinDispatch (hnb, &msg, NULL, 0, 0))
    WinGetMsg (&msg);
```

is called a "message loop." During the WinGetMsg call the Presentation Manager fills in the fields of the QMSG structure with the next message from the message queue. The WinDispatchMsg function then sends the message to the window to which the message is addressed. The window then processes the message by a function known as the window procedure.

THE WINDOW PROCEDURE Every window has a window procedure (sometimes called the window proc) associated with it. When we say that "a message is sent to a window," we mean that this window procedure is called with parameters that describe the message. When we say that "a window processes a message," we mean that this window procedure interprets the message and acts upon it.

Where are these window procedures? In the case of BOXES1, the window procedures for the frame window, title bar window, sizing border window, system menu window, and minimize/maximize window are located in the Presentation Manager. The window procedure for the client window is located right in the program. It is the function named ClientWndProc ("client window procedure").

How does the Presentation Manager know that the function ClientWndProc is the window procedure for the client window created in the WinCreateStdWindow function? That's the purpose of the WinRegisterClass function. This function reg-

Presentation Manager Identifiers Recognized by OS/2

Identifier	Description
CS_SIZEREDRAW	Class style: Invalidate window when size changes
FALSE	0
FS_MINMAX	Frame style: Include minimize/maximize menu in standard window
FS_SIZEBORDER	Frame style: Include sizing border in standard window
FS_SYSMENU	Frame style: Include system menu in standard window
FS_TITLEBAR	Frame style: Include title bar in standard window
HWND_DESKTOP	Handle to the desktop window occupying the screen background
TRUE	1
WM_ERASEBACKGROUND	Window message: Return TRUE if frame window should paint itself
WM_PAINT	Window message: Update invalid area of the window
WM_SIZE	Window message: The window size has changed
WS_VISIBLE	Window style: Show window after it is created

Figure 7: The identifiers defined by the header files reduce the numeric constants in OS/2 programs. BOXES1 uses those listed above.

■ ENVIRONMENTS

isters a window class with the name of "Boxes1." The window class name is then passed as a parameter to the WinCreateStdWindow function. The client window is said to be "based on" this class. All windows based on a particular class are associated with the same window procedure. The window procedure is specified as a parameter of WinRegisterClass.

When discussing the message loop, I said that the Presentation Manager stores messages that represent keyboard and mouse input in the message queue. These messages are retrieved from the queue by calling WinGetMsg and then sent to the appropriate window procedure by calling WinDispatchMsg.

But in other cases the Presentation Manager calls the window procedure directly. This is how the operating system communicates important events to the program—it sends the window a message by calling the window procedure. And this is

what is so unusual about Presentation Manager architecture in comparison with traditionally structured operating systems. We're accustomed to calling operating system functions from our programs. But in the Presentation Manager, the operating system calls us!

PROCESSING MESSAGES Presentation Manager programs are "message driven." They sit around waiting for messages. Only when a window gets a message does it interpret and process it.

ClientWndProc processes messages sent to the client window. When the Presentation Manager calls a window procedure, it passes four parameters to it. The first parameter (hwnd) is a handle to the window. The second parameter (msg) is a number that identifies the message. The mp1 and mp2 parameters are "message parameters." These provide information specific to the particular message.

A window procedure generally processes messages using a switch statement. The Presentation Manager header files define identifiers beginning with the letters WM ("window message") to determine the message being sent.

In BOXES1, ClientWndProc processes three messages—WM_SIZE, WM_ERASEBACKGROUND, and WM_PAINT. After it processes one of these, the window procedure returns FALSE (0). All messages not processed by a window procedure must be sent back to the Presentation Manager via the WinDefWindowProc function. This function performs default message processing for all messages a window procedure chooses not to process.

You'll recall that we began with the question, "How does a program know when the user has resized its window?" The answer: the Presentation Manager sends the window a WM_SIZE message. That is, the Presentation Manager calls the

USE THIS PASSWORD AND SELL YOURSELF ON CHAIRMAN.

If you have a PC and a modem, call (516) 462-6638 and use the password on this page. See for yourself what the first true multiuser bulletin board software can do.

Find out why CHAIRMAN™ is the choice of hundreds of organizations, including *PC Magazine*—for its own popular Interactive Reader Service (up to 2,500 calls a day). *PC Magazine* writes about CHAIRMAN: "For flexibility, speed, ease of setup, security, and company support, you can't go wrong."

SET UP YOUR OWN BULLETIN BOARD

With CHAIRMAN's unique multiuser capability, six callers can simultaneously access a bulletin board on one PC.

CHAIRMAN is the perfect answer for anyone who wants to distribute data on a timely basis, collect data from numerous sources, or do both. It handles electronic mail

needs at a fraction of the cost of the expensive services, such as MCI Mail™, The Source™, and CompuServe™.

Conduct electronic surveys, get questionnaires answered online, send price and delivery information to salespeople, find out support call details without tying up your staff, transfer binary and ASCII files, send software updates to your users, etc.

Combine CHAIRMAN with DMA's FORMULA IV, PC Magazine Editor's Choice in DBMS, to use your bulletin board for interactive database applications. CHAIRMAN is available in six-user, two-user, single-user, and network versions. A two-user demo is available for \$25 + \$5 S&H.

For more information, call (212) 687-7115 or write to: DMA, 545 Fifth Avenue, New York, NY, 10017. Ask about our volume discounts.

IBC has your computer replacement batteries.

In fact, that's our specialty: We are the world's largest supplier of computer batteries for IBM AT, PS2, and all other computers. So when your battery does start to die, IBC is ready to save your day. And keep you from being stranded. By delivering your replacement battery within 24 hours. All you have to do is pick up the phone and call us.

When do you need a new battery? Well, you can tell that time is running out when the clock and calendar begin to slow down. If you have an IBC battery on hand — and it makes sense because the shelf life of our batteries is 10 years — your battery slowdown won't slow you down! With an IBC battery handy, you don't miss a beat when your present battery starts to go.

But do you have to wait until

you're in an emergency situation to order your PC AT battery? Not at all. In fact, you can save the hassle of downtime and reconfiguration by changing your

battery once a year. And in the process, avoid the frustration of an idle computer while you wait for a new battery.

So put us on your emergency phone list. And when your vital signs are fading, give us a call. Remember, we're your source for computer batteries. We want to keep you running!

■ ENVIRONMENTS

window procedure with the msg parameter set to 7, which is the value that defines the identifier WM_SIZE. The old size of the window (in units of pixels) is encoded in the message parameter mp1. The new size of the window is encoded in mp2.

ClientWndProc processes the WM_SIZE message by extracting the new width and height of the window from mp2 using the SHORT1FROMMP and SHORT2FROMMP macros. The new width is saved in the variable xClient and the height is saved in the variable yClient. These two variables are defined as static because they must be used later while processing subsequent messages.

The first time ClientWndProc receives a WM_SIZE message is during the call to WinCreateStdWindow. The Presentation Manager creates the client window and then informs ClientWndProc of the window size by sending it a WM_SIZE message. ClientWndProc receives other WM_SIZE messages whenever the user changes the size of the window.

PAINTING THE CLIENT One of the most important messages processed by a window procedure is WM_PAINT. It informs the window procedure that the window needs to be repainted. More specifically, the message indicates that an area of the window on the screen has become "invalid" and no longer displays what the program originally put there.

How does part of a window become invalid? This can happen in several ways. When the window is first created, the whole area of the window is invalid and must be painted. When part of a window is moved off the screen, or when one window overlaps another, the Presentation Manager will usually not attempt to save the hidden area of the window. And when that area is moved back into view, it is an invalid area. This causes a WM_PAINT message to be sent to the window procedure so that the window can be updated.

A window procedure also receives a WM_PAINT message when the window changes size. The WM_PAINT message occurs after the WM_SIZE message. Thus, by the time the window procedure begins painting the window, it knows the new window size and can paint based on that size. This is what BOXES1 does.

A Computer "Book" That Will Never Be Outdated

The problem with most books about public domain and shareware software is that they are usually outdated before they leave the printer.

To overcome this problem, we put the definitive Guide to Public Domain and Shareware Software on disk. This makes it easy for us to keep it updated monthly, and you can get free updates by returning the disks to us.

The Public (Software) Library has for years been acclaimed by the national press as the most up-to-date, best organized library of PD/shareware available and this is reflected in the Guide.

But the Guide is much more than a catalog of the disks in the PsL. It is arranged by subject, from Accounting, Communications and Database to Statistics, Utilities and Word Processing.

Each section leads you to the specific type of software you need to solve your problems and then presents reviews of each of those programs.

Then you can order the disks for only \$5 each. Public domain programs require no other fee. The registration price for shareware programs is normally in the range of \$5 to \$50.

You can order the *Guide* now for just \$10, or you can find out more about the PsL by calling or writing for a FREE sample of our monthly newsletter and complete listing of disks in the library.

PROCESSING WMLPAINT Usually the processing of the WMLPAINT message begins with a call to WinBeginPaint:

```
hps = WinBeginPaint (hwnd, NULL, NULL);
```

This function returns a handle to a "presentation space." You need this handle to display anything on the window's surface. The presentation space handle is the first parameter to all the GDI graphics-drawing functions. GDI will clip graphics output on the window's surface—you can't draw outside your window even if you try.

A window procedure wraps up WMLPAINT processing with a call to WinEndPaint:

```
WinEndPaint (hps);
```

This has the effect of validating the entire surface of the window.

DRAWING LINES BOXES1 processes the WMLPAINT message by drawing a series of rectangles in its client window. The two functions it uses are GpiMove and GpiPolyLine.

You specify a coordinate point in GDI functions using a POINTL structure. The POINTL structure is defined in an OS/2 header file as follows:

```
typedef struct _POINTL
{
    LONG x;
    LONG y;
}
POINTL;
```

Thus a POINTL structure has two fields, called *x* and *y*, that are signed long (32-bit) integers. By convention, when you define a variable of type POINTL, you give the variable name a prefix of *pt*:

```
POINTL ptLowerLeft;
```

Again by convention, the variable name for an array of POINTL structures begins with the letters *apl*.

By default, the GDI coordinate space has an origin at the lower-left corner of the window. Values of *x* on the horizontal axis increase to the right; values of *y* increase going up. The units are pixels. (You can also use a coordinate system based on inches or millimeters if you wish.)

The GpiMove function does not draw anything. Instead it sets the "current posi-

How To Run Backwards & Forwards At The Same Time.

If your search for a totally compatible, high performance graphics card has felt a little like going in all directions at once, why not stop and take a breather. Because not only will VEGA VGA run all *current and future* VGA programs, it's also compatible with EGA, CGA, MDA, Hercules and even OS/2. Guaranteed.

Notice we said guaranteed. That's because of one simple fact: VEGA VGA is compatible, on a hardware level, with the IBM VGA. Just the sort of innovation you'd expect from the leader of the pack in graphics technology, Video Seven.

But VEGA VGA does much more than just keep pace with your software. It gives you the best business graphics available, in effect bringing PS/2-level performance to a regular PC. That means going well beyond standard VGA, with 800 x 600 resolution and up to 256 on-screen colors. What's more, VEGA VGA runs on any IBM PC monitor—*analog, digital, color or monochrome*. Finally, we protect your investment with toll-free technical support and a full five year limited warranty.

So don't wait. Visit your nearest Video Seven dealer today and find out more about VEGA VGA. It could take you in the best direction of all—to the top.

■ ENVIRONMENTS

tion" to the point indicated by the POINTL parameter to the function. The GpiPolyLine function then draws a series of lines (in BOXES1, four lines) starting from the current position.

ONE WINDOW TO ANOTHER Messages also allow windows to communicate among themselves. In BOXES1 this occurs with the WM_ERASEBACKGROUND message. The frame window sends this message to the client window. The message essentially says, "I (the frame window) have just received a WM_PAINT message. Do you want me to paint my window, thus effectively erasing the background of the client window?"

The client window can respond to this message in one of two ways. If the client window procedure returns FALSE (a zero value), the client window is essentially saying, "No, thanks. I'll erase the background of my window myself." If the window procedure returns TRUE, it's telling the frame window, "Sure. Go ahead."

If the client window does not process the WM_ERASEBACKGROUND message, then the message is passed to the WinDefWindowProc function. In response to the WM_ERASEBACKGROUND message, WinDefWindowProc returns FALSE to ClientWndProc and ClientWndProc then returns FALSE

to the frame window. The default processing of WM_ERASEBACKGROUND is for the frame window not to color itself when it gets a WM_PAINT message.

TERMINATION We've seen how the structure of BOXES1 allows the program to adjust the contents of its client window based on the size of the window. Whenever the size is changed by a user, ClientWndProc receives a WM_SIZE message followed by the messages WM_ERASEBACKGROUND and WM_PAINT. Whenever part of the window becomes invalid for other reasons, the client window receives WM_ERASEBACKGROUND and WM_PAINT messages and simply recreates what was there before. The program is structured around the processing of these messages.

All other messages to the client window are processed by WinDefWindowProc. One example of how this works is seen during the termination of a program.

A Presentation Manager program can be ended by selecting the Close option from the system menu. The frame window processes the command and then sends a WM_CLOSE message to the client window. If the client window procedure chose to process the WM_CLOSE message, it could ask the user for confirmation if any work had not yet been saved to disk. Win-

DefWindowProc processes the WM_CLOSE message by placing a WM_QUIT message in the program's message queue.

You'll recall this message loop in main:

```
while (WinGetMsg (hdb, &msg, NULL, 0, 0))
    WinDispatchMsg (hdb, &msg);
```

For most messages the WinGetMsg function returns a nonzero value. For the WM_QUIT message, however, WinGetMsg returns zero. This causes the loop to end. The program then calls WinDestroyWindow, WinDestroyMsgQueue, and WinTerminate and terminates normally.

TWO MORE FILES Two other files are required for compiling BOXES1. One of these files is the "make file" shown in Figure 8. You compile and link BOXES1 with the command

MAKE BOXES1

MAKE reads the make file and compares the date and time of the file indicated to the left of the colon (the target file) with the date and time of the file or files to the right of the colon (the source files). If any of the source files have been changed more recently than the target files, MAKE runs the indicated command.

Presentation Manager programs often use MAKE because the compiler switches available are more complex than normal and (as we'll see in the next issue) creating a Presentation Manager program usually requires a few additional steps beyond just compiling and linking the C source code file.

Another file required for Presentation Manager programs is in the "module definition file." The BOXES1.DEF file is shown in Figure 9. This file is read by LINK when linking the program and contains information that LINK needs to construct the .EXE file. Note in particular the EXPORTS statement in BOXES1.DEF—this statement must list all the window procedures in the program.

NEXT STEP: A MENU In the next issue we'll upgrade the program to include a menu and call the program BOXES2. The menu will allow selecting colors for the background and for the lines displayed in the client window.

```
-----
# BOXES1 make file
-----

boxes1.obj : boxes1.c
cl -c -G2sw -W3 -Zp boxes1.c

boxes1.exe : boxes1.obj boxes1.def
link boxes1, /align:16, NUL, os2, boxes1
```

Figure 8: The BOXES1 make file.

```

*Some of the perfectionists
at WordPerfect who helped design
DataPerfect 2.0.*

Introducing the database designed to please a bunch of perfectionists.

We're not easily satisfied at WordPerfect, a fact that's worked to our advantage. After all, it was our high standards that helped us to produce the world's leading word processor.

But those same high standards made it difficult to find an acceptable database for use at our headquarters. So we built our own.

Introducing DataPerfect[®] 2.0, the WordPerfect[®]-compatible database that's now available for perfectionists everywhere.

Our people wanted power, speed and ease-of-use. DataPerfect is powerful enough to create accounting and payroll applications, allowing

simultaneous network access to all records and files. It offers rapid look-up capabilities, even when thousands of records are involved. Providing the speed to manage our huge databases efficiently. And, with DataPerfect's menu-driven system, we can now define a database in a matter of hours.

We think DataPerfect is the database for the most hard-nosed perfectionists. So if your standards are as high as ours, it's made to order for you.

For more information, call or write WordPerfect Corp., 1555 North Technology Way, Orem, Utah 84057. (801) 225-5000.*

DataPerfect from WordPerfect

The best thing next to an IBM PC. Or any PC.

Model 310/360

Model 410/460

The economics of IBM ASCII displays.

The affordable Models 310 and 410, when equipped with cartridges, offer PC terminal function for all multi-user PCs. That includes the IBM® RT-PC™ computer and the IBM PS/2™ family.

What's more, Models 310 and 410 offer many popular emulations. Optional cartridges provide features such as concurrent DEC™ and PC connectivity, and auto dial. Both models come with a 3-year warranty. Add an IBM Maintenance Agreement, and you'll get five years of IBM service for just \$54.

The ergonomics of IBM ASCII displays.

They're not only economically attractive, they're easy to look at. Flat 14" screens offer non-glare viewing. Green or amber/gold short-persistence phosphors produce crisp character resolution. And each model uses the advanced 102-key IBM keyboard.

"Want more information? Just ASCII!"

For a free brochure and to find a distributor near you, call 1-800-IBM-7257 ext. 89. Or call your IBM Marketing Representative.

The IBM logo, consisting of the letters "IBM" in a stylized, blue, blocky font.

KEEPING FILENAME FULLY QUALIFIED

Programs that use incomplete filenames and let users change drives and subdirectories can be trouble. This routine converts incomplete file specifications into fully qualified filenames.

An MS-DOS system can contain many files with the same name and extension, provided the files are in different locations. MS-DOS requires only that each file be uniquely specified by the combination of a drive, path, name, and extension, in the form

`d:\path\name.ext`

The path can consist of one or more directory names, starting with the disk's root

directory and separated by backslash (\) characters. A file specification of this sort, which unambiguously identifies one file out of all the files in the system, is called a *fully qualified filename*.

If you had to enter fully qualified names whenever you wanted to work with a file, your patience would be exhausted in about 5 minutes—especially if you are in the habit of organizing your files in a neat, multilevel tree directory structure. Fortu-

nately, MS-DOS uses the concepts of a "current disk" and a "current directory" for each disk in the system. Whenever you enter a filename that omits the drive specifier or does not include a full path, MS-DOS fills in the missing information according to your current disk and directory.

The ability to use "locality" as an implicit part of a filename is a tremendous convenience from the user's point of view, but it can be a nasty trap for the program-

```

(continues)

Figure 1: The source code for QFN.ASM, a subroutine that converts an incomplete file specification into a fully qualified filename.

■ POWER PROGRAMMING

mer. Suppose, for example, you prompt the user for a filename and he enters

```
myfile.dat
```

Opening the file is no problem: MS-DOS will know that you mean myfile.dat in the current directory of the current drive. Filenames with "relative paths" like

```
d:\subdir\myfile.dat
```

or even

```
d:\..\subdir\myfile.dat
```

are no trouble either: MS-DOS can still find the file for you.

Suppose, however, that you also provide the user with a way of changing the current directory and/or current drive from within the program. If you store away one of these incomplete filenames for later use and the user subsequently switches to a new drive or directory, your program may not be able to open the file anymore or (worse yet) may open the wrong file.

■ The ability to use "locality" as an implicit part of a filename can be a nasty trap for the programmer.

Obviously then, what we need is a sub-routine to convert an incomplete file specification into a fully qualified filename that can be safely used at any time during a program's execution. The QFN.ASM listing in Figure 1 is such a routine.

USING THE QFN ROUTINE QFN is called with the address of a file specification in registers DS:SI and the length in

register AX. If the file specification includes a drive code, QFN makes sure that the drive exists. If no drive code is present, QFN adds the identifier for the current drive. Similarly, if a full path is included, QFN makes sure that the path actually exists. If the path is incompletely specified or missing altogether, QFN expands the path using the current directory of the current or specified drive.

If the drive and path components can be successfully resolved to an actual, valid disk and directory in the system, QFN returns the Carry flag cleared (0). The address and length of the fully qualified filename are returned in registers DS:SI and AX, respectively. If the drive or path do not exist, QFN returns the Carry flag set (1). The contents of registers other than DS, SI, and AX are always preserved.

QFN does not make any attempt to determine whether a particular file exists—only whether the specified or implicit location for the file is feasible. Thus, the rou-

New... SuperProject Software What The Experts Have To Say:

**"Just Released for OS/2—
SuperProject Expert/2"**

Aerospace: "SuperProject is the best. Earned Value Reporting and Work Breakdown Summarization give me complete project control and the graphics make impressive presentations." **Barry Feeley**, Technical Manager, Ford Aerospace.

Construction: "The familiar SuperCalc® and 1-2-3 menu system makes it really easy to learn and use. It handles multiple projects, networking and flexible

report writing. The multiple resource calendars and histograms manage resources very efficiently." **Ted Ritter**, CEO, O'Connor Construction Co.

Data Processing: "The Outliner allows me to quickly sketch critical schedules from the top down. Expert is way ahead of the pack." **D.W. Nesper**, Regional Consulting Manager, Wang Labs.

The SuperProject® Family—Plus, Expert and Expert/2—is the most advanced PC project management software available. The smallest to the largest and most complex projects imaginable are easily handled thanks to its virtual memory management skills.

Newly released SuperProject Expert/2 running under OS/2, gives you true multitasking. For example, this enables you to enter data in the foreground while outputting a report in the background.

And only Computer Associates gives you PC and mainframe project management. Develop your project planning on a PC and then upload to a mainframe with CA-PLANLINKS™. You can then consolidate that project with others via CA-TELLAPLAN™ and take advantage of its resource pooling and presentation graphics.

TAP THE HIDDEN POWER IN YOUR PC

Every DOS system—versions 1.0 through 3.3—can run faster and more effectively with the undocumented tricks and practical utilities included in this powerful book-and-disk package. Paul Somerson, *PC Magazine's* Executive Editor, has gathered together 1,200 pages of ingenious tips—help that no PC owner should be without. Included is a disk with over 200 ready-to-run utilities. Increase your computing power with:

- Many new DOS enhancements
- Utilities that automate hard disk and file management
- Techniques to streamline screen and printer control
- Easy-to-use programs for pop-up calendars, phone dialers, card files, appointment books, and graphic enhancers
- Tips on taming DEBUG, ANSI, and EDLIN
- Advanced batch file techniques

- Environment and memory wizardry

"An impressive collection of the very best PC power-user tips and secrets. Highly recommended!"
—Peter Norton

"A fabulous work, in a league by itself. It has found a permanent spot in my reference library.... A must buy!"
—John Dvorak

Figure 3: A sample session with the TRYQFN demo program.

time can be used to generate fully qualified names of files that are going to be created, or to evaluate drive/path combinations without any filename at all. If you supply QFN with only a drive identifier, it will return the drive and the current path for that drive. If you provide QFN with a partial or relative path terminated by a backslash, it will return a fully qualified drive and path combination.

HOW QFN WORKS The first thing QFN does, after saving the various registers and putting away the address and length of the supplied filename, is to use interrupt 21h functions 19h and 47h to obtain and save the current drive and directory. This is because we're still going to let MS-DOS do the hard work of inspecting the directory structure and evaluating such horrid possibilities as

```
z:dir1\..\dir2\..\myfile.dat
```

Thus, QFN starts by picking off the drive code (if any is supplied) and calls interrupt 21h function 0Eh to select that drive as the current drive. Unfortunately, function 0Eh is the direct equivalent of one of the more brain-damaged CP/M functions: it does not return an error code. The only way to tell whether function 0Eh succeeded is to follow it with a call to function 19h and see whether the drive we asked for actually became the current drive.

Next, QFN extracts the path component by scanning for the last backslash character, copies the path into a local buffer, adds a terminating null byte, and calls interrupt 21h function 3Bh to make it the current directory. We allow MS-DOS the fun of figuring out relative paths (which do not begin with a backslash) and the meaning of any dot (.) or double-dot (..) aliases that the path contains. If the call fails, we know that the path is invalid—some directory named in the path does not exist.

Once we get this far, the rest is simple. We call interrupt 21h functions 19h and 47h to get the current drive and directory, format them together in an ASCII buffer, and append the original filename. We fold the drive code, path, and filename to lowercase characters for visual consistency. Last, we restore the original path and drive and return the address and length of the fully qualified filename to the calling program.

By asking MS-DOS to figure out any complexities in the original path, and then retrieving the cleaned-up path, we've avoided a lengthy and messy coding problem. Of course, there may be MASM connoisseurs out there who will say the code for the QFN routine is lengthy and messy enough as it is. At first glance, there are certainly portions of it that appear redundant or unnecessary. There are three reasons for this:

1. I wanted to supply a routine that would also handle drives and/or partial paths without a filename.

2. I am a strong believer in having a common cleanup and exit point, for the sake of code integrity. Thus, I'm always willing to insert a little extra code elsewhere in order to simplify code at the exit point.

3. A backslash in an MS-DOS path has two totally different meanings, depending on its position. If the backslash occurs at the start of the path, it is the "name" of the

WAS THE FASTEST...

65MB Hard Drive System you get:

Computing Power

Transfer Rate • RLL Encoded Hard Drives • 1:1 Interleaving
 • World's Highest Performance AT Class Computer System!

Most computers look similar. Most vendors advertise processor speed and 28MBs hard drive access. There is little to distinguish one from another. These everyone tends to assume all computers are alike.

NOT SO. Northgate is truly a different system. And because it is, the computer buyer gets far greater computer value for his money. That's why Northgate has soared in popularity. Those who know choose Northgate.

They know they get value through performance that's demonstrated every time they turn on the system. They know all parts are World Class, not the ordinary "off the shelf" items others use to keep costs down.

Northgate pioneered RLL Drive and 1:1 Interleaving in its 286 systems. To our knowledge, no competitor even offers these vital performance features. Call them. We did. Only Northgate gives you this

unique throughput-enhancement.

If Northgate pricing seems higher, don't be deceived by Bare Bones Prices you see in others' ads. Northgate's System is complete — IT'S THE 286 SYSTEM YOU WON'T OUT-GROW! We encourage you—Shop Around. Call all the Others and Compare.

ALL THIS PLUS...The Computer Industry's Most Meaningful Service and Warranty Policy...

30-Day Compatibility Warranty:

Northgate guarantees its systems will operate any standard, common only available DOS programs written for use on IBM Compatible Computers. If, on consultation with Northgate, a program cannot be made to operate satisfactorily, owner may return the system, complete and unaltered for a prompt and full refund including all freight costs.

One Year Overnight AT NORTHGATE

EXPENSE Parts Replacement Guarantee
 Northgate Computer Systems warrants that all systems sold by Northgate will be free of defects in workmanship and materials for one year from date of shipment.

- In the event of failure of a part that disables the system Northgate will ship the same day if notified by 12 Noon Central Time, a new replacement part. Customer must phone Northgate Customer Service for diagnosis of the failure.
- Shipment of the replacement part will be by overnight-express service—AT NORTHGATE'S EXPENSE—for next day delivery depending on the carrier's ability to provide such service in owner's geographic area.
- Owner must return any replaced part, complete and unaltered, and pay return shipping costs, to be credited to Northgate within two weeks after receiving the replacement part.
- Northgate's Customer Service department will provide full

interaction on making the repair or replacement and will consult with customer on the phase to assure repair is properly completed and the system is again operating.

In the case of a complete system returned for repair under warranty, customer pays freight to Northgate and Northgate pays return freight by whatever service the system is sent to Northgate.

In the event of a part replaced under warranty, the new part carries a NEW ONE-YEAR GUARANTEE FROM SHIP DATE!

NOTE: Many computer vendors extend only the parts manufacturer's warranty which may be as little as 30-days. All products sold by NORTHGATE are fully guaranteed by Northgate for one year from date of shipment.

Database Add-In for 1-2-3 Has More Capabilities Than Rivals

by Marvin Bryan

The king of the crowded forest of Lotus 1-2-3 database add-ins is unquestionably @BASE...

@BASE was developed by Permetrics Corp. of Concord, Mass., maker of the popular *SortKing* utilities that add additional columns to the screen displays of Lotus 1-2-3 and Symphony.

With @BASE, it's possible to build colossal 32 M-byte databases in the standard dBASE III Plus format without ever using dBASE itself. Users can convert a normal 1-2-3 database instantly into a dBASE-compatible file, as well as set up dynamic links that will import updated information from dBASE records every time a worksheet is recalculated.

A database can be sorted alphabetically, numerically or chronologically on as many as 128 levels. In fact, @BASE will pack and sort records as much as three times faster than dBASE...

Data can be analyzed with a cross tabulation module to provide lightning-fast reports in response to such questions as "What sales people in each division earned more than \$20,000 in commissions this month?"

In addition, records can be entered or examined in a form view,

where each record occupies an individual screen. Alternatively, of course, the user can choose the usual one-record-to-a-line format.

We tested the current \$195 release of @BASE along with a beta copy of the Option Pac, which will retail for \$89.95. Together, these two relatively inexpensive products provide truly remarkable functionality.

In addition to the indexing feature, the Option Pac will join files to make relational databases, create computed or derived fields, sort a database without rearranging the records on disk, and automatically keep files in the correct sorting order during record entry or updating. See our ad on page 17.

@BASE

A database add-in for Lotus 1-2-3 that will access and create dBASE files without the use of dBASE itself. A superior product in every respect.

Price: \$195

From: Permetrics Corp.,
2352 Main St., Building 2
Concord, MA 01742

(617) 897-1575

(800) 445-3311 X1103

As a bonus, @BASE data can be turned into 1-2-3 graphs with practically no effort at all...

Permetrics has developed a series of @DB functions to perform calculations and evaluate records within @BASE... Each of these functions use one or more arguments to identify the database, record or field to be acted upon. Some functions allow criteria to be established, such as selecting a subset of records.

The 209-page manual for @BASE is excellent...The program adds less than 80K bytes to the RAM overhead of 1-2-3. For those who use both dBASE and Lotus 1-2-3, @BASE is practically a requirement. ■

PRODUCTIVITY

■ POWER PROGRAMMING

root directory and is followed immediately by the name of another directory with no intervening delimiter. If it occurs in any other position, it is simply a delimiter that separates two other directory names and has no intrinsic significance at all.

TRYING THE QFN ROUTINE The program TRYQFN.ASM in Figure 2 demonstrates the use of the QFN routine. It prompts the user for a filename, qualifies it with the drive and full path, and displays

■ The program TRYQFN.ASM demonstrates the use of the QFN routine. It prompts the user for a filename, qualifies it with the drive and full path, and displays the result.

the result. The demo program may be terminated at any time by pressing the Enter key alone in response to a prompt or by hitting Ctrl-C ("C").

To assemble the files TRYQFN.ASM and QFN.ASM into object modules and then link the modules to create the executable program TRYQFN.EXE, enter the following commands:

```
MASM /ZI TRYQFN;  
MASM /ZI QFN;  
LINK /CO TRYQFN+QFN;
```

The /ZI and /CO switches can be omitted if you don't want to poke around in QFN's innards with *CodeView*. A sample session using the TRYQFN program is displayed in Figure 3.

Enjoy a big Mac without eating anything.

What's this stack of DOS software doing next to a Macintosh® II? Waiting to be thrown out, right?

Wrong.

And while we're on the subject, what on earth is Lotus® 1-2-3® doing on these Mac screens?

Would you believe it's running?

That's right, 1-2-3 now runs—very smoothly and very quickly—on the Mac II and SE.

So does SideKick® dBASE III PLUS® The Norton Utilities.™ Microsoft® Flight Simulator. And all the DOSware we're aware of.

Including the programs—and data files—you assumed you'd have to eat in order to enjoy the fruits of Macintosh.

Teach your old DOS new tricks.

With SoftPC® software, running your favorite DOSware on your Mac is as easy as opening a window. And just as transparent.

You can open several DOS windows at once. Or both DOS and Mac windows. Then you can jump back and forth between them. Even cut and paste.

Remember, you're on a

Mac now, so you can do new things with your old DOSware.

But if you feel nostalgic, you can always put your new Mac on a LAN with your old PCs.

(Shhhh. With SoftPC, your LAN can't tell the difference.)

Food for thought.

SoftPC is either the best thing to

CIRCLE 496 ON READER SERVICE CARD

happen to DOS or the best thing to happen to Macintosh.

For sure, it's the best way we can think of to spend \$595.

You'll only have to spend it once. Because SoftPC is designed to take advantage of the latest technology.

Even technology that isn't here yet.

Fortunately, SoftPC is here now. Your dealer will be delighted to give you a demonstration.

Just ask for a big Mac with plenty of DOS.

Insignia™

Advanced Revelation:TM Building PC Applications dBase III And The Others Simply Cannot Handle.

Discover The Advanced RevelationTM Difference

Building a comprehensive personnel/payroll system to manage 15,000 employees on a 24-hour 386 PC network is not the kind of application you would want to tackle with an ordinary DBMS product best suited for building phone lists.

Nor would you want to rely on a traditional DBMS, to take on the challenge of building a materials handling and order shipping control system to be accessed in 120 manufacturing locations worldwide.

That's because it takes more than just a DBMS to build a solid PC application.

It takes a complete application building environment that includes not only a superior database, but also professional programmers tools and an easy-to-use Application Processor[®].

And that's the Advanced Revelation difference.

Since 1982 Advanced Revelation has been the only complete application development environment for IBM PCs and compatibles that offers these three critical application building blocks:

Multiple windowing environment makes it easy to control data and establish relationships between files.

1 Advanced Revelation's Application Processor puts the end user in control.

Most applications must be ultimately maintained by the users, able to write reports without any programming expertise. Customize their application by adding new fields of information, define new edit patterns, add entirely new windows.

Advanced Revelation's Application Processor offers a complete set of menu and window-driven tools for producing any application without coding or programming.

Pop-up windows offer options and HELP throughout the entire process.

Whenever a user builds screens, menus or windows, Advanced Revelation automatically builds and updates the central data dictionary and produces documentation.

2 Advanced Revelation's Programmer Tools for the professional application builder

Professional programmers require an advanced set of tools that permit efficient design of a complete application from database implementation to data entry and inquiry screens.

Advanced Revelation's Professional Programmer Tool Kit provides the tools you need to create even the most challenging applications. Like MRP and payroll/personnel systems. A task no traditional PC DBMS can perform.

Tools like a powerful programming language with complete dictionary integration, with dozens of database, string and three-dimensional dynamic array handling functions. A language so powerful that users have written such comprehensive utilities as word processors and spreadsheet sheets — applications normally written in the C language.

3 Advanced Revelation's Dictionary Driven Database centralizes intelligence

A solid PC application must be built around a superior database.

base. One where all the information is centralized for ease of update and ease of maintenance.

Advanced Revelation's relational DBMS truly centralizes the intelligence of your application through an active data dictionary. One that manages every element of the application information including field lengths, edit patterns, field descriptions and formulas, assuring that application maintenance is easily performed.

Advanced Revelation's unique variable length record architecture (providing maximum record length of 65,500 characters; up to 32,000 fields per record) delivers efficiency in storage as well as substantial improvements in database flexibility.

With Advanced Revelation's exclusive linear hashing retrieval technique, your application building and database design capabilities are unsurpassed. Even if your application contains 100,000 records, and has 24 users on a LAN, your retrieval time still can be one-half second.

Experience the
Advanced Revelation
difference yourself. Send
for your demonstration
system today

In less than two hours, your fully functional Advanced Revelation demonstration system will guide you through development of a complete customer, invoice and product tracking system.

If you have never built an application before — fear not. And if you consider yourself a programming "connoisseur" — you are in for a development session you will never forget.

Simply call toll free
800-327-0216
In WA 206-643-9898

Advanced Revelation's dictionary builder allows you to specify the names, output formats, edit patterns, date conversions, formulas for your fields.

Windows can be created and customized with Advanced Revelation's easy-to-use pointer.

■ DOUGLAS COBB AND STEVEN COBB

SPREADSHEET CLINIC

Editing records using an undocumented Query key function; calculating grand totals of worksheets with multiple sections; entering an actual monthly calendar series in 1-2-3.

A DATE SERIES MACRO

Because different months have different numbers of days, you can't use 1-2-3's /Data Fill command to create a series of dates exactly 1 month apart. Of course, you can enter a monthly date series manually. However, I prefer to use the macro shown in Figure 1.

The first statement in this macro allows you to specify the length of your series, which is stored in the cell MONTHS (B16). The macro then solicits the month, day, and year components of the first date in the series, storing your responses in the cells named MONTH (B14), DAY (B15), and YEAR (B16).

The next statement in the macro enters the serial value of the date described by the values in MONTH, DAY, and YEAR into the cell in which you have positioned the cell pointer. For example, if the cell pointer was on cell A21 when you invoked the macro, 1-2-3 would enter the function

@DATE (YEAR, MONTH, DAY)

into cell A21. If you specified 1 as the month component, 1 as the day component, and 88 as the year component, this function would return the value 32143—the serial date value of January 1, 1988.

After entering this date, 1-2-3 moves the cell pointer down one cell (to cell A22) and executes the statement in cell B7, which commands it to enter another @DATE function by typing and pointing. This function should return the serial date value of the day exactly 1 month later than the date whose serial value was returned by

the function located in the previous cell. Each of the {Up} commands in this statement causes 1-2-3 to point to the previous cell—in this case, cell A21—as it builds the formula.

The +31 portion of the first argument of the @DATE function assures that when the previous date is in December of one year, the function will return a date in the next year. The +31 portion of the second argument of the @DATE function assures that the function will return a value for a date in the next month. The third argu-

ment, \$DAY, assures that the function will return the value of the same day in each month.

To continue the example, 1-2-3 would enter the function

@DATE (@YEAR (A21+31), @MONTH (A21+31), DAY)

into cell A22. Since the function in cell A21 returned the value 32143—the serial date value for January 1, 1988—this function would return the value 32174—the serial date value for February 1, 1988.

The next statement in the macro copies

A		B
1	\d	{GetNumber "Enter number of months: ", MONTHS}
2		{GetNumber "Enter initial month (1-12): ", MONTH}
3		{GetNumber "Enter day of month (1-31): ", DAY}
4		{GetNumber "Enter initial year (87-1987, etc.): ", YEAR}
5		@DATE (YEAR, MONTH, DAY)
6		{Down}
7		@DATE (@YEAR ({Up}+31), @MONTH ({Up}+31), \$DAY)
8		/c- {Down}. {Down MONTHS-1}
9		{Up}
10		/rfd4 {End} {Down}
11		/rv {End} {Down}
12		
13	MONTHS	
14	MONTH	
15	DAY	
16	YEAR	

Figure 1: This macro enters a series of month-spaced dates into a worksheet column.

(a)	'@IF (@DAY ({Up}) > 3, {Up} + 28 - @DAY ({Up} + 28), {Up} + 31 - @DAY ({Up} + 31))
(b)	' + @IF (@MONTH ({Up}) = 1, @MIN (@IF (@MOD (@YEAR ({Up}), 4) = 0, 29, 28), @DAY ({Up}) {Abs})), @IF (@MONTH ({Up}) = 3 @OR (@MONTH ({Up}) = 5 @OR (@MONTH ({Up}) = 8 @OR (@MONTH ({Up}) = 10 @OR (@MONTH ({Up}) = 12), @MIN (30, @DAY ({Up}) {Abs})), @DAY ({Up}) {Abs}))

Figure 2: Two modifications needed by the macro shown in Figure 1 to make it work in all cases. The label shown above as "(a)" replaces that in the original B7. The label shown as "(b)" above goes into a new row inserted between the original rows 7 and 8.

■ SPREADSHEET CLINIC

the function that 1-2-3 just entered into the remaining cells of the range you wanted to fill. Since the year and month arguments reference the previous cell, the result of each function will be a value in the month after the month represented by the result of the previous function. Since the day component is an absolute reference to the cell named DAY, however, each date value will represent the same day of its month.

The final statements in the macro assign the D4 format to the cells into which it just entered @DATE functions, then replace those functions with their current results.

Jack McKinley
Denver, Colorado

Mr. McKinley's macro works well in most situations. But it will not generate a correct series when you specify the value 31 as the day component of the starting date, nor when you specify a day component of 29 or 30 and the series spans the month of February.

To make this macro work correctly in all cases, you must insert a new row between rows 7 and 8, and replace the entry in cell B7 with the label identified as "(a)" in Figure 2. You must then enter the label identified as "(b)" into cell B8. Together, these labels construct a formula that adjusts properly for the different number of days in each month.

QUERY FIND TRICK

When you issue the /Data Query Find command, 1-2-3 highlights the criterion-matching records, beginning with the matching record closest to the top of the database. (The Cursor Up and Down keys move the highlight to other criterion-matching records.) When you press Enter or Esc, 1-2-3 returns the cell pointer to the cell on which it was positioned when you issued the command.

In many cases, however, I want the cell pointer to stay on one of the highlighted cells when I cancel the /Data Query Find command. It's a nuisance to have to write down the address of the cell and return to it with the {Goto} command—and I've found an easier way.

If you press the Query key (F7) while 1-2-3 is in the FIND mode, 1-2-3 cancels the /Data Query Find command and returns you to the READY mode. Instead of

	A	B
1	\q	{Let POSITION,@CELLPOINTER("address")}
2		{Esc}q
3		{Goto}{POSITION}~
4		
5	POSITION	

Figure 3: This Symphony macro cancels a {Menu} Query Find command and positions the cell pointer on a cell of the last record that was highlighted.

returning the cell pointer to its original cell, the program leaves the cell pointer in the record that was highlighted when you pressed F7. Specifically, it puts the cell pointer on the cell that contains the underline cursor. Unless you pressed the Right or Left Arrow keys while 1-2-3 was in the FIND mode, this will be the leftmost cell of the record.

Unfortunately, Quattro does not support this useful behavior of the Query key. Perhaps Borland's programmers weren't aware of this feature, or else thought it was a bug.

Israel Kehaty
Corvallis, Oregon

This previously undocumented function of the Query key was new to us and will benefit many 1-2-3 users. The feature would be even more useful in Symphony than in 1-2-3, since Symphony does not allow you to edit records while it is in the FIND mode. However, Symphony does not have a Query key.

Fortunately, you can use a macro like that in Figure 3 to duplicate this action of the Query key. You should invoke this macro after issuing the {Menu} Query Find command, using the Cursor Down and Up keys to highlight the record you want, and using the Right and Left Arrow keys to position the underline cursor on the appropriate field of that record.

The first statement in this macro takes the absolute address of the cell in which the underline cursor was positioned when

you invoked the macro and enters it into the cell named POSITION (B5). The next statement cancels the {Menu} Query Find command, returning the cell pointer to the cell on which it was positioned before you issued the command. The final statement moves the cell pointer to the cell whose address is stored in POSITION—the cell on which the underline cursor was positioned when you invoked the macro. To understand how this final statement works, see the following submission by Donald Fields.

SAVING A CELL LOCATION

The set of macros presented by John Gustason (Spreadsheet Clinic, April 12, 1988) that save the current position of the cell pointer works well, but I wish to suggest using a slightly different technique. Rather than enter the address of the current cell into a cell of the "return" macro, I put it into a cell outside the macro and access it with a subroutine call, as shown below in Figure 4.

The statement in the "save" macro enters the absolute address of the current cell into the cell named LOCATION (B3). The first part of the statement in the "return" macro tells 1-2-3 to press the Goto key. While the prompt "Enter address to go to:" is visible at the top of the screen, 1-2-3 reads the second part of the statement, {LOCATION}. This subroutine call tries to execute the commands in the cell named LOCATION.

In this case, the LOCATION cell sim-

	A	B
1	\s	{Let LOCATION,@CELLPOINTER("address")}
2		
3	LOCATION	
4		
5	\r	{Goto}{LOCATION}~

Figure 4: This macro uses a subroutine call to access the saved address.

When You Want To Leave A Good Impression.

AST-VGA.

There's a bit of the "master" in all of us. It shows up whenever you're called upon to create a work of art. Whether the subject is a three-dimensional drawing, a spreadsheet or a flock of birds on a summer sky, the impression you want to leave is professional, accurate and exactly as you first imagined it.

Bright beautiful colors. Ultra-fine resolution. Compatibility with state-of-the-art software. You'll get all of this and more with AST-VGA and AST-VGA Plus; two new full-range graphics adapters from AST.

AST-VGA is designed to take advantage of IBM® PCs, XT's and compatibles. In addition to register-level VGA graphics and OS/2™ compatibility, drivers for Microsoft® Windows™ and popular application programs such as Ventura Publisher®, AutoCAD® and GEM® are included. AST-VGA provides 16 colors at 800 x 600 and 256 colors at 600 x 400. All at a price that's as attractive as the screen you'll see on your computer.

AST-VGA Plus is a high-performance 16-bit graphics adapter that takes advantage of the extra speed of IBM AT's and compatibles, including compatibles running at 12.5 MHz. With 16 colors at 800 x 600 and 256 colors at 640 x 480, it's easy to see why AST-VGA Plus is a must for sophisticated CAD/CAM applications.

Of course, both boards offer downward compatibility through EGA, CGA, MDA and Hercules® to insure your prior software investments. And 132-column support provides ease-of-use for all of your spreadsheet artists.

Interested in making a good impression? Call AST at (714) 863-0181 and ask for Operator Number AA22, or send in the coupon.

Yes, send me information.

■ SPREADSHEET CLINIC

ply contains the label form of the absolute address of the cell on which the cell pointer was positioned when you invoked the "save" macro. Thus, 1-2-3 types that address to the right of the prompt. Since the cell below LOCATION is blank, the program returns to cell B5 and executes the final part of the statement, -, which presses Enter. This completes the Goto command, moving the cell pointer to the cell whose address is stored in LOCATION.

Donald Fields
Louisville, Kentucky

The only precaution you must observe in using these macros is to make sure that the cell below the one containing the subroutine is blank or contains the {Return} command.

CALCULATING GRAND TOTALS

Many of my 1-2-3 worksheets are divided into multiple sections, like the one shown in Figure 5. To calculate a "grand total" for these worksheets you can use the simple formula $+B7+B13+B20$, which adds the results of the @SUM functions in the cells B7, B13, and B20. If you have to add or delete sections of the worksheet, however, you will then have to edit the formula so that it includes the subtotals for the added sections and excludes the subtotals for the deleted sections.

Recently, I've found a better way to

	A	B
1	SECTION 1	
2	Entry 1a	977.45
3	Entry 1b	888.85
4	Entry 1c	588.96
5	Entry 1d	722.15
6		
7	Subtotal 1	3,169.41
8		
9	SECTION 2	
10	Entry 2a	458.85
11	Entry 2b	964.15
12		
13	Subtotal 2	1,423.00
14		
15	SECTION 3	
16	Entry 3a	242.51
17	Entry 3b	644.46
18	Entry 3c	269.73
19		
20	Subtotal 3	1,168.78
21		
22	GRAND TOTAL	5,753.12
23		

Figure 5: You can use the formula $@SUM(B1..B21)/2$ to calculate the grand total for this worksheet.

calculate a grand total for a worksheet of this sort. Instead of using an addition formula, I now use an @SUM function to calculate the total of the entries in each section plus their subtotals, then divide by 2. For example, to calculate the grand total for the worksheet shown in Figure 5, I'd use the formula $@SUM(B1..B21)/2$. Since the @SUM function includes both the individual values and the sum of those values, its result is exactly double the true grand total. Consequently, dividing by 2 returns the correct answer.

Unlike the simple addition formula, this one does not need to be edited when I add or delete sections from the worksheet.

■ The @SUM function is a better way to calculate a grand total of a worksheet with multiple sections.

When I insert new sections, 1-2-3 expands the @SUM range to include them; when I delete sections, 1-2-3 contracts the @SUM range. The extra row at the top and at the bottom of the @SUM range assures that 1-2-3 will adjust the formula properly when I add a new section above the first section or below the last one, and when I delete the first or last sections.

Alan Tiet
Los Angeles, California

Mr. Tiet's technique can come in handy in a number of different situations. Note, however, that it will return an incorrect result if, when you make your worksheet changes, you include a section for which you do not calculate a subtotal.

■ EDITED BY SALVATORE P. RICCIARDI

USER-TO-USER

Automating program development using batch files; using the DOS APPEND command with BASICA; setting a brighter graphics palette.

BRIGHTENING UP GRAPHICS

The default color palette used in medium-resolution color modes creates, on my monitor, a less than appealing display. To correct this, and brighten things up a little, I wrote a small TSR program, **INTENSE.COM**, that forces the brighter color palette to be used. Interrupt 10h function 0Bh is used to select the color palette used in graphics mode. When loaded, **INTENSE**

intercepts this call and changes the requested palette to include the brighter colors.

Dwayne Budzak
Edmonton, Alberta
Canada

The CGA medium-resolution colors are quite murky—it's a mystery why they were chosen as the default. But this small TSR can fix that oversight.

To create **INTENSE.COM**, type the **INTENSE.SCR** DEBUG script file (Figure 1) using a pure-ASCII text editor such as WordPerfect's Program Editor, or the DOS command

COPY CON INTENSE.SCR

Be sure to hit the Enter key at the end of each line, especially the last one, and a blank line above **RCX**. Then, get back to DOS and type

DEBUG < INTENSE.SCR

to create the executable file.

The program **INTENSE** should be loaded only once, preferably in your **AUTOEXEC.BAT** file, before any programs using the medium-resolution graphics mode are run.—Robert L. Hummel

USING APPEND WITH BASICA

I have discovered a problem that occurs when using the DOS 3.3 **APPEND** command and **BASICA**. If I have **APPEND** loaded and execute the demonstration **BASIC** program shown in Figure 2, the file **FILEA.TXT**, located in a directory that is included in my **APPEND** path, will be overwritten by the **BASIC** program. Al-

```
10 OPEN "TMP\FILEA.TXT" FOR OUTPUT AS #1
20 PRINT #1, "Creating 'TMP\FILEA.TXT'"
30 CLOSE
40 SYSTEM
```

Figure 2: A sample **BASIC** program that demonstrates a potential problem using **APPEND** with **BASICA**.

though the program should create a new file in the **\TMP** directory, it doesn't.

If there is no existing file named **FILEA.TXT** along an **APPEND** path, then things will work as expected. Otherwise, important data is at risk.

Dave Bartholomew
Oakland, California

The **APPEND** command carries with it several caveats that users need to be aware of—this is one of them. **APPEND** loads as a TSR and monitors all DOS file open requests. When a file open request is processed and the file cannot be found, **APPEND** then steps in and attempts to find a file of the same name in any of the subdirectories in its "path." If it finds one, it substitutes it for the requested file. The calling application never even knows that this has happened.

This substitution, however, can be dangerous in certain situations. The problem lies with the way **BASICA** determines whether it should try to open an existing file or create a new one. The same **BASIC** language statement, the "OPEN" statement, is used for both.

When **BASICA** processes the "OPEN" statement, it uses a two-step approach. First, it assumes that the file exists and at-

■ USER-TO-USER

tempts to open it using the DOS open file handle function. Then, if the file does not exist, it creates it using the DOS create file handle function.

This process works just fine without APPEND. With APPEND loaded, however, instead of failing because the requested file doesn't exist, the open file handle function can be satisfied by any file of the same name anywhere in the APPEND path. This makes deliberately creating a new file difficult if one with the same name already exists somewhere in the APPEND path—because BASIC will never get to step two of its two-step sequence for opening a file.

The best solution is to not use the APPEND command. And you don't have to if your application supports subdirectories. APPEND's main purpose is to provide subdirectory access to applications that were written before DOS 2.0. But if you must use APPEND, try the following.

If the intent is to create a brand-new

file, precede the OPEN statement with an OPEN "filename" FOR INPUT statement. If this call fails (trap the error using ON ERROR), you can assume the file does not exist in the current directory or in the APPEND path. If the call succeeds, a file with that name exists somewhere in the APPEND path, and caution is needed.

What if you want to update the file \TMP\FILEA.TXT if it exists, but create it if it doesn't? Unfortunately, with APPEND loaded, there is no way of knowing whether a successful OPEN has opened the requested file or one somewhere in the APPEND path. The BASIC program must take responsibility for retrieving the APPEND path from the DOS environment and searching through it for files of the same name before attempting to open the file. To make this step possible, the APPEND command provides the IE option, which causes the APPEND path to be placed in the DOS environment. From

there, it can be retrieved using the BASIC ENVIRON\$ command.

The DOS reference manual's explanation of APPEND implies that reading a file, then writing it, may not write the file in the expected directory. It also cautions against using the DOS APPEND command along with the APPEND command from either the IBM PC Network Program, Version 1.00, or the IBM PC Local Area Network Program, Version 1.10. Users of APPEND would be wise to read the DOS manual section on APPEND thoroughly before using it in their applications.

—Salvatore P. Ricciardi

"SMART" BATCH FILES

Integrated environments are great—they include an editor, a compiler, a linker, and even a make facility. And while many popular languages have this support, there are still some that do not. If you're using one of these (such as MASM or IBM CO-

An inside look at the best 386 value around.

The more you look into 386 compatibles, the more you realize that well thought-out design innovations (that really work) are few and far between.

That's why our engineers set out to design the GV-386. They realized they could unlock more of the chip's potential, if only they could speed up data retrieval, without affecting system reliability.

INNER POWER

Here's how they did it: a high-speed RAM cache circuit—a full 64K of superfast memory—that puts your most frequently accessed data right at your fingertips. If you're ever involved in processing complex databases, long spreadsheets, or detailed engineering drawings, you'll see the value of this innovation in a second...literally.

Best of all, the cache circuit actually makes the GV-386 more reliable than other high-speed machines, by sparing integrated circuits from harsh overloading.

Our 885 is on-line 24 hours
Call The Soft Spot at 918-252-9137

Prices subject to change

GV-386 Specifications

- ☐ Available with 16MHz or 20MHz CPU
- ☐ Zero Wait States
- ☐ 64K Cache (keyboard enabled)
- ☐ 1MB RAM on-board, expandable to 4MB
- ☐ Socketed for 80287 or 80387
- ☐ I/O Bus runs at 8MHz for hardware compatibility
- ☐ Six 16-bit slots: Two 8-bit slots
- ☐ Price: 20MHz systems start at \$2,750; 16MHz systems as low as \$2,375

QUALITY THROUGHOUT

Of course, our most important criterion when designing our super compatible wasn't speed—it was quality. Take a look inside the GV-386 and you'll see it everywhere: from the highest quality components available to the intelligent use of special CMOS RAM to store system set-up information. On the outside, the fit and finish of the GV-386 would make Big Blue green. Even the user's manual has impressed users and reviewers alike.

We'd like to tell you more about what went into the GV-386. Give us a call and we'll give you the whole story. We'll also tell you about our exclusive 30-Day Compatibility Guarantee, our full One-Year Warranty and our toll-free support service.

The GV-386 from PC Designs. With design innovations this advanced, at this price, it's an open and shut case.

■ USER-TO-USER

BOL/2) or simply prefer another editor, you can still move fairly quickly between the basic components of program development by using "smart" batch files.

For example, after invoking MASM use the following batch file:

```
ECHO OFF
REM SMART.BAT
ECHO %0 %1 > C.BAT
ECHO LINK %1; > L.BAT
ECHO EDIT %1.ASM > E.BAT
MASM %1;
```

You can quickly reedit the source program if necessary by executing the batch file E.BAT, and then recompile by executing C.BAT. After a successful compile, LINK is at your fingertips with L.BAT.

The batch files are created by redirecting the output of ECHO to a drive/directory in your PATH. The batch files are smart in that they remember the program name that you last worked on. The batch

ECHO OFF

```
REM A BATCH FILE THAT REMEMBERS YOUR LAST COMMAND
ECHO %0 %1 %2 %3 %4 %5 %6 %7 %8 %9 >REDO.BAT
```

Figure 3: A batch file that remembers your last command.

file variable "%0" is useful for specifying the name of the batch file being executed. For example, to create a batch file that can be reexecuted quickly, use the command shown in Figure 3.

Brian E. White
Richmond, Virginia

All programmers find the edit-compile-link process fatiguing. But if you can't—or won't—use an integrated environment, these batch files really help.

To create a batch file that links as well

Salvatore P. Ricciardi is a technical editor on the staff of PC Magazine.

as compiles, add the following line to the end of SMART.BAT.

```
LINK %1;
```

INTRODUCING THE G/ETHERNET™ LAN: VERY STANDARD

Plug-compatible with other Ethernet® LANs.

VERY FAST

And outperforms the competition every time.*

You want standards. Now the developer of G/Net™, one of the most popular PC LANs in the industry, has introduced G/Ethernet. It meets all the specifications of the IEEE 802.3 networking standard. And because it follows the standard, G/Ethernet is plug-compatible with most Ethernet cards.

You want speed. With Gateway's G/Ethernet, you get the fastest Ethernet on the market today. As much as 339% faster, and that's without the added cost and complexity of special file server cards. We engineered G/Ethernet to its maximum capacity so that it's capable of handling heavier network loads than most other Ethernets.

You also want expansion capabilities. So G/Ethernet is fully compatible with Gateway's complete line of wide area communications products. Using our multi-user gateways, you can connect G/Ethernet users to a variety of micro, mini, and mainframe resources virtually anywhere in the world. And you can easily bridge G/Ethernet to any number of Advanced NetWare®-based LANs using G/Remote Bridge™.

And you've always wanted support. With G/Ethernet, you get more than just a great LAN. You also get the best support service in the business from a total communica-

tions solutions company — support enjoyed by over 100,000 satisfied G/Net users.

G/Ethernet is available from your local Gateway reseller right now, with virtually all versions of Novell Advanced NetWare.

And because we were the first LAN vendor ever to run NetWare, nobody supports NetWare better than we do.

We've got what you want. And we've got proof. Call today for our FREE *G/Ethernet Performance Comparison Testing Report*. See for yourself how G/Ethernet outperforms the competition.

SORRY, BUT THE NEXT GENERATION DATABASE WON'T SHIP IN JULY

BASE

MAGNUM DATA
12100 Peach Blvd., San Diego, CA 92121

TO: Paul Rappier
1425 Woodside Ave.
"Pepper" 92107

RUSH

Whether you're a novice or an expert, R:BASE is now your best choice for order-entry and inventory control, personnel and payroll, or any other database application, large or small.

But you don't have to take our word for that:

"It combines the ease of use a novice requires with the sophistication and power a professional demands. R:BASE for DOS is clearly the best general-purpose PC DBMS available today."

—PC Week

NOBODY LIKES DOING THINGS THE HARD WAY.

So R:BASE uses its advanced technology to let you do everything, even create complete applications, without

learning any commands.

Screens, forms and reports are all laid out visually, so what you see is what you get.

For data management on the fly, R:BASE uses PBE (Prompt By Example) instead of QBE (Query By Example) because queries aren't all you need to do. Just select tasks and R:BASE does them, helping you with menus, prompts and on-line help.

To automate your database needs, you can record all your key-strokes in the interactive mode, then play them back later.

Or use our second-generation application generator to quickly and easily create user-friendly

We're talking about the DBMS you've been hearing about.

The PC database management system that "leapfrogs into the next generation," the "most powerful, easiest to use DBMS ever made for a PC."

But it's not the PC database system that may ship at the end of July. It's here. Now.

MEET THE NEW DBMS STANDARD.

Meet R:BASE.®

WYSIWYG screens forms and reports.

You'll have
to see it
to believe it.

d way

NAME	ADDRESS	CITY	STATE	ZIP
John Doe	123 Main St	Anytown	CA	90210
Jane Smith	456 Elm St	Springfield	IL	62701
Bob Johnson	789 Oak St	Chicago	IL	60601

R way

IF YOU DON'T WANT TO READ ALL THAT, READ THIS:

Easy-to-use Prompt-By-Example (PBE) does everything because queries (QBE) aren't all you need to do.

WYSIWYG screens, forms and reports.

Automatic applications for novices and quick prototypes for power users with no programming, no commands.

Really easy SQL that even novices can use with menus, prompts and on-line help.

LANs are free for up to 3 users, with full concurrency control down to the item level.

Real OS/2 means that R:BASE is the only PC DBMS that gives you multi-tasking, automatic caching, etc.

Share micro data by importing/exporting dBASE.® Lotus.® Multiplan.® ASCII files or import from pfile.® and dBASE II.®

Share mainframe data from SQL/DS, Rami II, SAS, etc. through Lotus' The Applications Connection.®

Companion products include: network six-pack and unlimited LAN versions; runtime; business graphics; Program Interface to C, Pascal and FORTRAN; English as a query language.

IT'S SHIPPING NOW

applications without learning a single command or writing a single line of program code.

IS R:BASE FAST? IT SCREAMS!

We rewrote R:BASE in C and optimized it for speed.

Then made it smarter, so database operations like SORT, VIEW and CROSSTAB are up to 20 times faster because R:BASE automatically chooses the fastest way to get the information you need.

And our built-in intermediate code compiler adds another giant burst of speed.

MORE POWER THAN YOU MAY EVER NEED.

With no programming, novices and experts can quickly and easily include advanced features like data validation. Computed values and conditions. Look-up capabilities. Even relational links for order-entry or invoicing systems so that data is entered into or retrieved from multiple files.

Or you can work directly with R:BASE's extensive programming language, or easily build on the code produced by our application generator.

R:BASE supports up to 80 tables (data files) in a database. Provides scores of scientific and business functions, powerful commands, password protection and keyboard macros. Has a really easy to use SQL that can be used with menus, in command

mode, or embedded in custom programs. Includes an intermediate-code compiler that generates fast, efficient code. Offers a runtime package. And more.

LAN'S, OS/2™ AND A WHOLE LOT MORE.

R:BASE for DOS comes out of the box with support for up to 3 LAN users (more available), with concurrency control

down to the item level. And R:BASE for OS/2 has the same features and facilities with the added bonus of multi-tasking—so anyone can do several things at once—and even faster performance.

With all this, R:BASE for DOS (1-3 users) is just \$725; R:BASE for OS/2 (multi-tasking) is \$895. Check it out with your nearest dealer, or contact: Microrim, Inc., P.O. Box 97022, Redmond, WA 98073.

■ EDITED BY CRAIG L. STARK

POWER USER

Identifying the current drive and subdirectory in Clipper and dBASE III Plus; creating concordance files in WordPerfect; checking single-word spelling in Microsoft Word.

SPEEDING UP WP

While putting WordPerfect's dictionary and thesaurus on a RAMdisk speeds up their use, the WP manual overlooks the speed advantage you can gain by copying WP.EXE and the necessary auxiliary files to the RAMdisk as well. Loading becomes nearly instantaneous, even using WPR, and more important, moving through long documents is significantly faster.

The copy of WP on my RAMdisk requires its own {WP}SYS.FIL, which you must create using WP's setup command (WP/S). I store this new file in the WP directory on my regular hard disk under the name {WP}DSYS.FIL, and I have my AUTOEXEC.BAT rename it {WP}SYS.FIL when copying this and the other needed files to the RAMdisk.

In the setup file, I specify that the automatic backup files reside on the hard disk, since a system crash would destroy them if I put them on the RAMdisk.

Joel Samoff
Palo Alto, California

Readers should note that this plan requires a large RAMdisk. The overflow files ({WP}.TVI, {WP}.BVI) for large documents can total nearly the size of your work file. If, after all of the WP files are copied to the RAMdisk, the remaining disk space is greater than the size of your work file, you should have no trouble.

—Neil J. Rubenking

CONCORDANCE CONSTRUCTION

When indexing a large document, the concordance feature of WordPerfect makes it

unnecessary to mark each occurrence of a word manually. Creating the concordance file directly from the primary document is fast and easy with the two macros shown in Figure 1.

To add a word to the concordance file (created as document 2), simply place the cursor on the first letter of the word and press Alt-I. To add text longer than one word, first block the text and then press Alt-Y. The macros automatically append the word or phrase you chose to the end of document 2.

Having these two macros, I can now go through a hard copy of a document and

highlight what I want indexed. My secretary simply scrolls through the document and invokes the appropriate macro at the points I marked. I can later edit the concordance file and eliminate duplications by sorting the file.

Nick Dimas
San Antonio, Texas

Do remember to save the file you create in document 2. You will definitely want to look it over before using it, because it's likely to have a few stray characters. For example, if you choose the last word in a sentence, the period will appear in the

<Ctrl-F10>	Begin macro definition
<Alt-I>	Attach this macro to Alt-I
<Alt-F4>	Block on
<Ctrl-Right>	Mark the current word
<Left>	Don't include the space after it
<Ctrl-F4>2	Copy the block
<Shift-F3>	Switch documents
<Home><Home><Down>	Go to the bottom
<Ctrl-F4>5	Retrieve the word
<End><CR>	To end of line, then a carriage return
<Shift-F3>	Back to Doc 1
<Ctrl-F10>	End macro definition
<Ctrl-F10>	Begin macro definition
<Alt-Y>	Attach this macro to Alt-Y
<Ctrl-F4>2	Copy the block
<Shift-F3>	Switch documents
<Home><Home><Down>	Go to the bottom
<Ctrl-F4>5	Retrieve the word
<End><CR>	To end of line, then a carriage return
<Shift-F3>	Back to Doc 1
<Ctrl-F10>	End macro definition

concordance file. But the editing is easy,
much easier than creating the concordance
without help.—Neil J. Rubenking

SINGLE-WORD WORD CHECKING

In the Power User of December 8, 1987,
Jim Levitt suggests using Microsoft
Word's Library Run command and running
WORDFIND to check the spelling of
single words. However, if you highlight
the word and hit Ctrl-F6, the thesaurus will
not only tell you if you misspelled the word
but will list words that are similar to it.
Also, if you are unsure how to spell a
word, you can type as much as you know
and hit Ctrl-F6.

Dan Nebres
Everett, Washington

*You can indeed use the thesaurus as a
quick and dirty spell checker, but it's not
really designed with that purpose in mind
and will often find a root word when what
you really want to know is the right spelling
for the suffix. (Is it ignoring or ignore-
ing? Either one will find ignore in the the-
saurus.) I prefer to spell-check the entire
document at once, after I've finished writ-
ing it. But for those who can't wait,
WORDFIND is often the better choice in
Word, Version 3.1.*

*If you decide to upgrade to Word, Ver-
sion 4.0 (and you should), you won't find
WORDFIND on your disk. Instead, you
can check a single word by hitting Alt-F6
to start the spelling checker, then using the
new Lookup choice on its main menu. This
is still nowhere near as slick as, for exam-
ple, the spelling checker in WordStar, Ver-
sion 4.0—which will look up words and in-
sert them in the text for you without ever
leaving the document—but it's definitely a
step in the right direction.*

—M. David Stone

dBASE CALL HOME

dBASE III Plus does not include any built-
in function you can use to identify the cur-
rent DOS drive and directory. Fortunately,
however, DOS's interrupts 21h and 47h
provide this information directly.

Enter the DEBUG scripts shown in Fig-
ures 2 and 3 with any word processor that
produces a pure ASCII output. Be sure to
end each line with a carriage return, in-
cluding the blank line after RETF. To cre-

ate the .BIN files, make sure DEBUG is on
the DOS path and issue the following com-
mands:

```
DEBUG < GETDRIVE.SCR
DEBUG < GETDIR.SCR
```

Then, inside your dBASE III Plus pro-
gram, you can CALL for this data with

```
STOR = * TO curdrive, curdir
LOAD getdrive
LOAD getdir
CALL getdrive WITH curdrive
CALL getdir WITH curdir
RELEASE MODULE getdrive, getdir
```

Kevin Owens
Lake Charles, Louisiana

```
N GETDRIVE.BIN
A100
MOV SI, BX
MOV AH, 19
INT 21
ADD AL, 41
MOV BYTE PTR [BX], AL

W
Q
```

Figure 3: A DEBUG script for GETDIR.BIN.
LOAD and CALL this binary from dBASE III
Plus to identify DOS's current directory.

Choose your favorite. \$525

We're not selling printers, but a new networking device that'll make it seem like you have an extra one. Or two or three.

The Buffalo® SX can actually multiply the effectiveness of laser printers, dot matrix and daisy wheel printers, modems, and plotters. Anyone can send work to any printer—even when it's busy—and go back to work immediately. So it can save you thousands of dollars on extra printers you don't buy.

All the right connections

The Buffalo SX is an intelligent buffer, switcher and interface converter all in one. It allows several PC users to select any output device connected to the network.

There are ten ports—five parallel and five serial. Five can handle either input or output. So you have lots of options. Seven PCs sharing three peripherals. Two PCs sharing eight peripherals. Or any combination between.

But that's only the beginning. You can link more SXs together to share a set of peripherals with any number of PCs (of course, when you get up into the dozens, you might need another laser).

Power windows & automatic transmission

To set up the SX, just plug it in and define the ports using the switches and software provided. Concise documentation tells you how. If you have a question, call our toll-free support line.

When someone's ready to print, they simply use the handy little menu that pops up on screen with the names you've chosen. Call your printers Martha, Chatterbox, Relic, whatever.

The SX does the rest. It handles interface conversions, making parallel and serial machines

work together. Yes, it even lets IBM® PCs, Macintoshes® and HP 3000s share a laser with no fiddling. And PCs can exchange files with communications software.

Best of all, it stores print jobs in its large buffer and feeds data to the printers automatically. So people can use their computers within seconds. ("Large" means a standard 256K memory, expandable to one full megabyte)

Free software bonus

Order now and receive \$100 worth of productivity tools free:

○ HyperKey™ Keyboard Enhancer—increases speed and accuracy dramatically. Instant on-off for repeat keys!

○ HyperDrive™ Disk Caching—makes applications run 3-5 times as fast. Fully utilizes Above™ Board memory.

○ Print Booster™ for 1-2-3®—freezes your PC about four times faster when printing graphs.

All you stand to lose are long coffee breaks

If you've tried a printer buffer, you know how limited most are. The SX is different. It's the slickest productivity booster this side of a \$10,000 LAN. It's so dependable, it comes with a full one-year warranty. Plus this money-back guarantee.

Order a Buffalo SX. Try it for 45 days. If you can part with it, send it back for an immediate refund. No questions asked. And you can keep the productivity software.

We're certain you won't give it up once you've tried it. We think you'll add more. Ask about our other low-cost buffer/switchers too. There's one for every application imaginable.

Call now. Use Visa, MasterCard or American Express. You'll save hours of frustration. Plus the cost of another laser!

Just one of dozens of network configurations possible with the versatile SX

Buffalo Products, 2805 19th Street SE, Salem, OR 97302 (503) 585-3414. Call Toll Free:

BUFFALO

ERASE. ARE YOU SURE?

Every computer user faces this question in some form each day. To erase or not to erase. To save or not to save, when saving means overwriting the previous version of a file. If you answer yes and you're wrong, *countless hours of work will be wiped out by a single keystroke!* And there won't be anything you can do about it, unless you're backed up.

Disk failure, theft, power surges—any of these can sneak up on you when you least expect it. However you look at it, backing up important files is essential. And nothing will make a believer out of you like finding out, just once, that you weren't as sure as you thought.

MaynStream: A Sure Thing.

MaynStream is a file-by-file backup system that protects information on your drive by copying it onto a special tape and restoring it from the tape to any drive you specify, on command. With MaynStream, backup is a breeze. You'll see all the options you need right on the screen. In seconds, you can easily customize the backup process to work the way that's best for you.

Backup Is Just The Beginning.

MaynStream's pull-down menus make it remarkably easy to back up, restore, assign names to frequently backed-up groups of files, select optional password protection, and more! And context-sensitive, on-screen help is just a keystroke away.

And, because MaynStream is completely portable and compatible with all PC and PS/2 systems, you can use a single MaynStream to back up all the personal computers in your office—whether you have a classic PC or compatible, or a PS/2 Model 30, 50, 60, or 80! Plus, MaynStream is Novell-approved, and works with all popular LANs including Novell, 3COM, and IBM's PC Net.*

The Inside Track

MaynStream is also offered for internal installation in the PC or compatible, and in the PS/2 Models 60 and 80. Plus, it comes with a number of faceplates designed to match today's most popular computers.

MaynStream, from Maynard Electronics. Backed by our 1-year warranty and Technical Support Team. In these uncertain times, it's one thing you can be sure of.

MAYNSTREAM. YES I'M SURE!

MaynStream is available in 20, 60, and 150MB cassette or cartridge models and foreign language versions.

Call us today for the name of your nearest authorized dealer or more information on today's leading tape backup system.

 **Maynard Electronics**
We're backing you one-hundred percent.
460 E. Semoran Blvd., Casselberry, FL 32707 407/331-6402

■ POWER USER

Mr. Owens's excellent utilities are much faster and easier than the programming approach I've used in the past to get this information.

GETDRIVE returns the current drive as a 2-byte string: the drive letter plus a colon. GETDIR returns the current directory without its initial backslash. For example, if your computer is set on a subdirectory called \PC\UTIL, a CALL to GETDIR will return the 7 bytes PC\UTIL. Moreover, if you are on the root directory, GETDIR will return a null string (zero length). So in order to produce the same results as the DOS CD command, you must add the leading backslash, thus:

```
dos_cd=curdrive+"\"+curdir
```

Unfortunately, dBASE versions before III Plus cannot CALL binaries. The programming alternative involves RUNNING CD and redirecting its output to a temporary text file; APPENDING this text file into a two-field database; and then STORING the contents of its one record to a pair of memvars.

Users of Wordtech Systems' DBXL or Quicksilver may use these binaries as is, but FoxBase Plus, Version 2.0, employs DOS registers differently, and these routines will not run properly without change. The newest FoxBase (Version 2.1) has direct functions to derive both the current drive and the directory. Clipper users should see the submission from Sean Stephens that follows.—Brad Stark

CURRENT DR/SUBDIR IN CLIPPER

Clipper has no function for determining the current drive, and this information can be critical when, for example, the user is logged onto one drive but is executing a program from another, or when he must copy files between two drives.

I use the DOS internal VOL command, Clipper's SAVE SCREEN, and substring-

```
SAVE SCREEN TO o_scr
CLEAR
: VOL
SAVE SCREEN TO n_scr
cur_drv=SUBS(n_scr,AT('d',n_scr)+12,1)
+cur_drv is letter of current drive
REST SCREEN FROM o_scr
RELEASE n_scr,o_scr
```

Figure 4: A Clipper routine that stores DOS's current drive to a memory variable.

```
SAVE SCREEN TO o_scr
@ 8,8
RUN cd
SAVE SCREEN TO n_scr
ptr=1
dos_cd=SPAC(8)
DO WHILE SUBS(n_scr,ptr,1)>" "
dos_cd=dos_cd+SUBS(n_scr,ptr,1)
ptr=ptr+2
ENDDO
REST SCREEN FROM o_scr
RELEASE n_scr,o_scr
```

Figure 5: An alternate routine that finds both drive and subdirectory.

ing to provide the current drive letter (see Figure 4). Clipper saves screens as alternating characters and attribute bytes. I locate the d from the word drive in VOL's output, then count over 6 letters and 6 attribute bytes to locate the drive letter. This is stored to the memory variable CUR_DRV as the character A, B, C, or whatever.

Sean Stephens
Houston, Texas

Usually, you need both the drive and current subdirectory, so here are a couple of approaches to that end.

Users of Clipper's newest ("Summer '87") version can STORE the current subdirectory directly with this undocumented function built into the program's EXTEND.LIB:

```
<memvar>=>CURDIR{"<DriveLetter>"}
```

The DriveLetter in this case can be supplied using Mr. Stephens's routine.

Figure 5 is a takeoff on his creative idea, substituting DOS's CD for VOL. This has the advantage of providing both the drive and subdirectory in one step, and it can be used with older versions of Clipper.—Brad Stark

SHARE YOUR POWER

Tell fellow users about your latest technical tips for hardware and software applications (other than spreadsheets, networks, languages, or DOS) through Power User, and we'll pay you \$50 or more for your trouble, plus an extra \$25 if you submit your letter on a disk. If you send a disk, please include a printout. Mail your contributions to Power User, PC Magazine, One Park Avenue, New York, NY 10016. ☐

LANGUAGES

A simple program to merge C and assembler code listings; creating custom character fonts in BASIC; real-time programming without interrupts in Turbo Pascal.

BASIC

CREATING CUSTOM FONTS

One of the powerful capabilities of the Epson FX series of dot matrix printers is their ability to download and use custom character fonts. These new characters replace those in the existing set. Greek letters or special symbols, for example, may be included in a document.

Custom characters are defined in terms of the printhead pin numbers needed to produce them. The printhead can be visualized by setting up a 12 by 7 grid on a piece of graph paper. The x-axis defines the width of the character and is labeled from 1 to 12. On the y-axis the scale represents the printer pin numbers in powers of 2 and ranges from 2^1 through 2^7 . This is shown in the diagram "Sample Firing Pin Pattern."

When defining your own character set, remember that the same pin cannot be used on two adjacent columns. This would

Sample Pin Firing Pattern

The pin firing pattern for the CHR\$(248) degree symbol.

```

```

(Figure 1 ends)

cause jamming of the pins and possibly damage the printhead. The BASIC program listing (Figure 1) shows several examples for downloading custom characters using simple LPRINT commands.

Ron McCormick
Tampa, Florida

After running this program, any of the six new characters that have been defined may be printed by using the appropriate CHR\$() values. Additional custom letters and symbols may be defined using the techniques that are described by Mr. McCormick—but there is another method to consider.

Most dot matrix printers allow you to send graphics images directly, which can be done on the fly each time the special symbol is needed. For example, type in the

following command string on one line:

```
LPRINT CHR$(27); "L"; CHR$(8); CHR$(8); "" STRING$(4,144); ""
```

It will print the CHR\$(248) degree symbol, but without adding it to the current set of resident characters.

The CHR\$(27) "L" sequence initializes double-density graphics, and the CHR\$(8) CHR\$(8) pair tells the Epson printer that 8 bytes of graphic data are to follow. (Two bytes are sent to accommodate long graphics strings—hence the use of the first number plus 256 times the second number.) The remaining bytes are the graphics data, which in binary represent the degree symbol. The data follows an organization similar to that used for the downloadable characters.

Note that since the printer is in graphics mode, it will print only as many bits as you

tell it to. Therefore, you may need to specify a few extra CHR\$(0) bytes to maintain the correct spacing between characters. PC Magazine's CALC calculator (Utilities, March 29, 1988) will prove invaluable when converting the various binary bit patterns to decimal CHR\$() values.

With patience (and a thorough reading of your printer's owner's manual), these techniques could be applied to any printer that is capable of loading custom fonts or accepting graphics commands.

—Ethan Winer

TURBO C

MERGING C AND ASM LISTINGS

Sometimes the only way to trace a difficult bug in a C program is to study the machine language instructions generated by the

```

/* MERGE.C
 * DESCRIPTION: merges a .c source file with an asm file
 */
#include <stdio.h>

#define LINEBUFFER 200

```

Figure 2: MERGE.C is a handy little utility that allows C code to be mingled with the compiler's assembly output.

■ COPY PROTECTION

RUN YOUR PROGRAM ON ANY HARD DISK

UNLock Masterkey Removes Copy Protection from 180 PC Programs

The new UNLock MasterKey "copying" disk by TranSec and best selling UNLock Album D allow you to quickly and easily make unprotected DOS backup copies of more than 180 popular original PC programs.

Your original disk is unchanged and the unprotected backup copies perform exactly the same as the original, as do copies of these copies.

UNLock copies run on any hard disk, including Bernoulli Boxes. No original key disk is required in Drive A. You can also run on a RAM disk and conveniently copy DOS 5 1/4" disks of 3 1/2" diskettes.

Take protection off programs not listed by using generic routines.

New UNLock MasterKey is TranSec's most comprehensive copy protection removal program. It unlocks all the programs in

TranSec's Albums A+, B+ and D+...and more than an additional 130 programs. It is intended for the user who wants the best and most comprehensive copy-busting program available.

Master Key has the ability to break more than 180 specific menu listed programs. In addition you can take protection off programs not listed in the menus by using generic routines for the PROLock protected programs.

With UNLock MasterKey an analyzer will tell you if the disk is protected by either PROLock or SUPERLock, so that you can simply apply the proper UNLock liberating routine. Even many programs using hardware protection schemes can be unlocked.

While other copiers will make copies of some programs, only UNLock removes copy protection. Backups can't require tedious uninstalls, and reorganizing your hard disk doesn't result in your software calling you a thief! To order call 1-800-423-0772.

UNLock MasterKey™ \$159.95

Add \$5.00 shipping/handling Foreign orders \$10.00

MasterKey unlocks the programs in Albums "A" Plus and "D" Plus and those below:

FINALLY!

EASYFLOW

An on-screen flowchart processor that knows about flowcharts - not just another "screen draw" program that makes you do most of the work. EasyFlow is a powerful full-screen graphics program dedicated to flowcharts and organization charts. With it you can quickly compose charts. More important, you can easily modify charts so they are always up to date.

- ▶ **Automatic:** Fully automatic text centering within shapes, both horizontally and vertically. Fully automatic line routing & re-routing.
- ▶ **Fast:** Written in assembly language for speed.
- ▶ **Large:** Charts up to 417 columns wide by 225 lines high. Chart too large for your printer? EasyFlow automatically breaks the chart up & prints it in page size pieces.
- ▶ **Standard:** All standard flowcharting shapes included. Custom shapes can be ordered.
- ▶ **User friendly:** Don't take our word for it. PC Magazine* says "EasyFlow lives up to its name. It's hard to imagine any easier and more flexible way to produce basic and even complex flowcharts".
- ▶ **Mouse:** Optional but fully supported.
- ▶ **It prints:** On most popular matrix printers including IBM, Epson, Toshiba, HP LaserJet, LaserJet-Plus and many others.
- ▶ **It plots:** On HP7440, 7475, 7550, 7570, 7585B and compatible plotters.
- ▶ **It works:** We are contractually prevented from mentioning the name of the "big eight" accounting firm that purchased a world-wide site license, but we can tell you that they spent months evaluating all available flowcharting packages before choosing EasyFlow.
- ▶ **Rush delivery:** Order by noon today (eastern time) and we'll have it to you by courier tomorrow*. Rush delivery charge is \$15.00 (instead of \$2.00) and is available only in USA & Canada.
- ▶ **Documented:** 100 page manual plus over 150 screens of context sensitive help.

EASYFLOW works on IBM PC's, IBM PS/2 and compatibles. Requires 384 K memory, DOS 2.0 or higher and an IBM CGA/EGA/VGA or Hercules monochrome compatible adapter card.

Order direct for only **\$149.95 + \$2.00 S&H (USA/Canada)**, \$10.00 (foreign). Payment by M.O., cheque, VISA, Mastercard or Company PO.

* March 10, 1987 issue, page 278

** Rush orders are shipped by Puffinbarger Courier and normally arrive the next business day to most locations. Remote destinations take longer.

The chart fragment above was produced on an HP LaserJet-Plus and is actual size and unretouched. Publication quality charts like this can be produced using only minutes of preparation time and seconds of print time.

compiler. While Turbo C can generate an assembler listing from a C source file, it can't put the two together in one file. To solve this problem, I wrote a C program, MERGE.C (shown in Figure 2), that creates a single "merged" listing of the original C source code and the compiler's assembler output. The result includes the C code as comments embedded in the assembler source.

To use MERGE, create an assembler listing from your C source code file by using the standalone Turbo C compiler with the -S option. Using the program HELLO.C (see Figure 3) as an example, the command line would be

```
TCC -S HELLO.C
```

This generates the assembler source file, HELLO.ASM. Next, create a merged C and assembler listing, HELLO.MER, as shown in Figure 4, by executing MERGE.

```
MERGE hello
```

Dean Johnson
Oxnard, California

Now, here's a productive use of C! Not only can MERGE aid debugging efforts, but a "merged" listing can be very useful for learning how C is translated into machine language by the compiler.

The limitations of MERGE require that only one .C file at a time be used to generate a merged listing. Since #include references are, of course, only used by the compiler, they will not be listed. Also, since Turbo C will rearrange code for maximum speed or size, the generated assembler may not be in logical order if optimization switches are used.

I took the liberty of modifying MERGE.C slightly to include the globalization of the line buffer, filename buffers, and file pointers (to get them off of the stack); the creation of the write_merge_line() function instead of inline code; and a slight streamlining of the program logic. Micro-

```
#include <stdio.h>
main()
{
    printf("Hello, world!\n");
}
```

Figure 3: The simple "Hello, World" program used to produce a merged listing.

```

        name      hello

Figure 4: This merged listing shows the original C code (highlighted) and helps demonstrate what goes on when the HELLO.C program to the left is merged with the compiler's machine language output. Listings of this type can help show what goes on inside a C program.

"YOU HAVE A TREAT COMING"

That's what PC Magazine had

to say about PC-File+, and now this powerful data-base

program is even better: **NEW!** Graphs to help you make your point. Includes: pie, bar, line, scatter, and smoothed average. **NEW!** 8087/80287 math coprocessor support for lightning fast operation. **NEW!** Expanded record end field lengths hold more data.

With PC-File+ version 2.0 you get these and 26 other additions to the database that is already the favorite of over half-a-million users.

Why do people like PC-File+ so much? It's affordable (*just \$69.95*). Technical support is excellent (just call). And its features (on-line help, 10 sort levels, labeling, and mail merge, just to name a few) rival those of products that cost 5 times as much.

So treat yourself and give PC-File+ a try today. Call

1.800.JBUTTON for the name of the dealer nearest you. (In WA: 206.454.0479.)

PC-File+. Just \$69.95 for a product that should cost hundreds.

"Affordable, high performance software is possible. All it takes is true commitment to customers."—Jim Button

soft C users can produce a similar merged listing by compiling with the /Fa and /Fs options.—Richard Hale Shaw

TURBO PASCAL

REAL-TIME CLOCK DISPLAY

The program shown in Figure 5 exploits the fact that many programs spend most of their time waiting for keyboard input. If your program follows this pattern, it is very easy to create a real-time clock display without having to patch the BIOS clock interrupt vectors. Naturally, a program that is heavily bound up in non-keyboard tasks cannot use this technique.

To make use of the program's idle time,

■ It's easy to create a real-time clock display without patching the BIOS clock interrupt vectors.

I created a function called KeyInCoprocess. This function constantly checks for a pressed key. If no key is pressed, it calls the coprocess, in this case the Clock routine. When the user presses a key, the loop

ends and KeyInCoprocess returns the key as the function result. Actually, you could call a different coprocess from this routine—for example, print spooling or spreadsheet recalculation. The only limitation is that the coprocess must be liberally sprinkled with "IF KeyPressed THEN EXIT" statements, to prevent long waits at the keyboard. [The coprocess would also require a method for returning to the exact location and state from which the EXIT occurred.—NJR]

You now must throw out the normal Pascal Read procedure and instead use a procedure called NewRead. The main difference between the two is that NewRead gets characters from the keyboard using

```
PROGRAM Coprocessor Clock;
($V-,C-) (NOTE These two compiler switches are ESSENTIAL!)
TYPE
  AnyString = STRING(255);

VAR
  PresentColor,
  PresentBackColor : BYTE; (global variables for colour control)
  NewColor, NewBackColor : BYTE; (global variables for clock control)
  Count : ANYSTRING; (global variables for this program)
  Count : BYTE;

PROCEDURE SetColor(F, B : BYTE);
BEGIN
  PresentColor := F; (remember the colour settings)
  PresentBackColor := B;
  TextColor(F); (and implement them)
  TextBackColor(B);
END;

PROCEDURE Clock; (clock display)
TYPE
  CASE Integer OF
    1 : (AL, BL, CL, DL, BP, SI, DI, DS, ES, Flags : Integer);
    2 : (AL, AH, BH, CH, DH, CF, CH, DF, DH : BYTE);
  END;

VAR
  ColumnHold, RowHold, ColorHold, BackGroundHold : BYTE;
  Tmp : STRING(2);
  Time : STRING(8);
  Secs : BytePack;

BEGIN
  WITH Secs DO
    BEGIN
      AN := SEC; (get time from mcdow)
      AH := SEC; (call the clock interrupt)
      HOURS := SEC;
      (did the time change Y?)
      IF (CH <> HOUR) OR (CL <> MIN) OR (DH <> SEC) THEN
        (delete the (DH <> SEC) if you don't want seconds display);
      BEGIN
        HOUR := CH; (save the new time)
        MIN := CL;
        SEC := DH; (delete if you don't want seconds display)
        RowHold := Whereat; (save the present cursor position)
        ColumnHold := Whereat; (save the present colour)
        ColorHold := PresentColor; (save the present colour)
        BackGroundHold := PresentBackColor;
        SET(ROW+2, Tmp);
        Time := Tmp;
        SET(MIN+2, Tmp);
        Time := Time+' '+Tmp;
        SET(SEC+2, Tmp); (delete if you don't want seconds display)
        Time := Time+' '+Tmp; (delete if you don't want seconds display)
        WriteTime;
        GOBACK(TP, 1); (go and display the time)
        SetColor(LightCyan, Black);
        WriteTime;

Compatible with
Windows 386 and OS/2

Where two worlds become one

You have the best of both worlds with SigmaVGA/H. One display adapter that gives your PC/XT/AT the power to display any standard software written for the IBM PC or the PS/2.

From the PC World—Everything the Best EGA Board Offers, And More Start with 100% hardware compatible EGA, CGA, MDA, and Hercules.

SigmaVGA/H supports all the standards including digital monitors and 132-column text mode. So you can run all the PC software you own, including Windows 386.

From the PS/2 World—Everything That IBM's VGA Offers, And More

Continue with 100% hardware compatibility for VGA. Better yet, run VGA, EGA, CGA, MDA, and Hercules all on the new analog monitor. SigmaVGA/H gives you the power to run all the new PS/2 software, including OS/2.

For Your World—One Graphics Board Built on the Experience of 400,000

Sigma Designs introduced the first VGA board, and has sold over 400,000 VGA and EGA adapters to date. We know that

informed customers will make the right decision. So get the facts straight from the people who wrote the book, "VGA Issues and Answers." To get your free copy or to find out more about SigmaVGA/H, call us at (415) 770-0100.

ACCOUNTING SOFTWARE YOU'LL NEVER OUTGROW.

Business managers now are projecting their accounting software needs well into the future. That's smart. The software you choose must meet the demands of your evolving business and provide management information to help fuel growth.

In the words of PC Magazine, Macola Accounting Software "is at the top of its class... a flexible, powerful system that is well suited to many different businesses."

13 Integrated Modules

Accounting General Ledger—Accounts Receivable—Accounts Payable—Payroll—Assets/Depreciation

Distribution Inventory Management—Customer Order Processing—Purchase Order and Receiving

*Call for availability. IBM, PS/2, OS/2 are registered trademarks of IBM. Micro Focus is a registered trademark of Micro Focus Corp. PC Magazine is a publication of Ziff Davis Communications Co. Macola is a registered trademark of Macola, Inc.

Manufacturing Bill of Material Processor—Material Requirements Planning—Master Scheduling—Shop Floor Control*—Job Costing*

Plus there's a Report Writer that allows customized reporting and can easily transport data files to popular spread sheet, word processing and data base programs.

Proven Network Compatibility.

Macola Software reflects 15 years of maturity in mini and micro LAN environments. No other software can say the same. So when your business is ready to add more workstations, your software is ready as well. With no limitations.

Speed and Data Integrity.

Macola Software is written in Micro Focus COBOL for maximum speed and data integrity (source code available.) IBM has licensed Micro Focus COBOL as its SAA standard for the new PS/2 and OS/2.

Comprehensive Support. PC Magazine also determined "Macola's technical support, documentation and customization assistance meet the high standards set by the software."

Running Is Believing. Your choice of Macola Software is a one-time solution for the life of your business. For detailed information, "live" demonstration modules and an authorized reseller in your area, call today:

KeyInCoprocess and then writes the characters to the screen using the Write procedure. Now, whenever your program is gathering information from the keyboard, the clock will tick away in the upper-right corner of the screen. The Clock procedure shown here updates the time every second. If this continual updating drives you scatty, then you can delete a few lines and just display chances every minute.

The sample program in Figure 5 also includes a procedure called `SetColor`, which I find simplifies the manipulation of screen colors. It is particularly useful here because the `Clock` procedure has to write in a certain place and color without losing the previous place and color.

Andrew Fiddian-Green
Singapore

There have been a number of real-time clock programs submitted for this column. The coprocessing technique shown here is certainly safer than modifying the clock interrupt. It may be useful in a program such as a word processor, where in fact most of the time the program is waiting for further user input.

One limitation is the requirement that all Reads go through the NewRead procedure. This procedure accepts a single parameter of a string type. In order to simulate reading multiple items or nonstring variables, you will have to read a single string first and then parse it or convert it to another variable type.

Readers familiar with user-defined I/O drivers may wonder why I don't suggest simply replacing the standard ConIn routine with one that calls a coprocessor while it's waiting. Unfortunately, calling such a process from within the ConIn routine creates many of the same problems found in the original interrupt-driven clock procedure.—Neil J. Rubenking

The computer world is humming about two new Samsung Semiconductor & Telecommunications (SST) brilliant performers — the S500 and S300.

Fully AT compatible, the S500 is the right PC to turn your one-man show into a symphony. Easily switchable from 8 to 10 MHz, the S500 offers 8 expansion slots to support video displays, modems, expanded memory and more. A 1.2 MB 5 1/4" floppy disk drive comes standard and a hard disk can be added for ample memory capacity.

It possesses superb talents such as a small package, only 16" by 16".

Fully XT compatible, the S300 runs at 4.77 or 8 MHz and is a powerful, yet economical alternative. It is ideal for use as a stand-alone system or for inclusion as a workstation in a local area network.

Samsung Semiconductor & Telecommunications (SST) supports its already excellent reputation in the computer industry by offering you these excellent products and an attractive warranty program to support them.

New from Samsung. S500 and S300 that're yours for a song.

These products are solely distributed through Tech Data Corporation, wholesale distributor in U.S.A. and through CANARA in eastern CANADA, TERRIER in western CANADA.

■ ROBERT L. HUMMEL

PC TUTOR

Two easy patches that improve REMOVE.COM; the truth about bad sectors on hard disks; the genealogy of the parity flag; and DOS's poor dual-display support.

BAD SECTORS ON HARD DISKS

My department has four brand-new IBM PS/2 Model 50s, each equipped with an IBM 20MB hard disk. CHKDSK shows that all four have a number of bad sectors ranging from 20K to 100K.

My contact at the local ComputerLand (who set up our systems) says that IBM considers a drive "good" even if 10 percent of its sectors are bad. An associate of mine asked his service representative about the problem and was told that as long as the balance of usable bytes on the hard disk was at least 20MB, the customer got what he paid for.

We also have an XT clone in the office. CHKDSK reports no bad sectors on this disk. What problems will we experience with the PS/2s and their bad sectors?

Ernest J. Mascarello
Omaha, Nebraska

A hard disk is really a collection of oxide-coated disks, called platters. All data will eventually be stored on the surfaces of these platters, so the quality and consistency of the oxide coating go a long way toward determining the reliability of the drive as a whole. The coatings are never perfect, however. The platter manufacturing process may produce thin spots, thick spots, or even bubbles.

When the hard disk drive is assembled at the factory, it is put through a rigorous test program. These testing procedures represent the manufacturer's best attempt to ensure that all the recording surfaces will be able to be reliably written and read over the life of the disk. Because of vari-

ance in the manufacturing tolerances, some areas of the platter surfaces may fail this testing.

THE BAD TRACK LIST *The areas that fail this test are uniquely located to a single track by specifying their head (surface) number, cylinder number, error size, and distance around the cylinder from an arbitrary index. (These two latter parameters are often termed BL and BCAF, or bit length and bit count after index.) Unfortunately, if any spot on the track is found bad, the entire track is abandoned.*

All the errors detected in the hard disk are printed out by the manufacturer either on a label that is then affixed to the hard disk or as part of a quality control report that is shipped along with it. Some companies that sell complete computers thoughtfully remove this information, along with manuals and setup disks, before shipping to customers. This is based on their belief

that what you don't know won't hurt you. But there is a good reason why the original manufacturer provided this "bad track" information.

PHYSICAL FORMAT *After a hard disk has been installed in a computer system, the next step in preparing a disk drive is to do a low-level, or physical, format. If you think of a newly manufactured disk as a blank piece of paper, then performing a physical format on the disk is analogous to drawing lines on the paper: it creates a structure capable of holding information.*

Most programs that perform a physical format allow the bad tracks listed on the manufacturer's report to be entered before the format is performed. These tracks are then excluded in their entirety from the initialization during the physical format. This occurs even if only a single bit on the whole track caused the error.

If these bad tracks are not "forced," by entering the head and cylinder number, the physical format program will attempt to initialize them. If it detects the error, it will force the track as bad anyway. But often the low-level-formatting program succeeds at initializing a track that the manufacturer marked as bad. This may be because the error was a soft error that might show up only in the long term. The consequences of this will not be immediately obvious.

LOGICAL FORMAT *When the physical format is complete, a logical format (also known as a high-level format) is performed. The logical formatter normally*

■ Some companies that sell computers remove bad sector information. This is based on their belief that what you don't know won't hurt you.

Affordable Networking

Just \$80 per PC

Don't get trapped in a multi-user world. With ExcellNET and your PCs, mainframe power is available on a desktop, without mainframe limitations.

- Preserves the single user, stand alone features of the PC, while allowing you to share information via file transfer.
- Eliminates costly LAN cables and expensive network interface cards.
- Frees you from dedicated servers and network administrators.

Features

- Networks PCs, XT's, AT's, PS/2's and compatibles.
- File Transfer quickly, accurately and inexpensively.
- Share printers, plotters and peripherals.
- Modem support for world wide communications.
- Exchange data between 3 1/2" and 5 1/4" disks (allows laptops to share resources with desktops).
- Inexpensive RS-232 communications.

■ PC TUTOR

used is the DOS FORMAT program. The logical format divides each track into sectors and writes additional information needed for DOS to the disk.

If FORMAT encounters a track that was forced bad by the physical formatter (even because of a single bad bit), it has no options. It must mark the entire track as bad. A standard hard disk is formatted for 512 bytes per sector and 17 sectors per track, so a bad track will cause CHKDSK to report 8,704 bytes in bad sectors.

If FORMAT finds an error on a track that was not marked bad by the low-level formatter, it has a different course of action available. (In any sector that it can't reliably read and write, FORMAT will note as bad and mark only the affected cluster. (A cluster is the smallest amount of disk storage that can be allocated by DOS.) On a 20MB hard disk, sectors are handled in clusters of four. Thus, the same single bit error will cause CHKDSK to report only four sectors of 512 bytes per sector, or 2,048 bytes in bad sectors.

Unfortunately, there are some errors that neither the physical formatter nor the DOS FORMAT program have the sophistication to detect. Over the long run some of these errors may crop up and cause loss of data when you least expect it.

A brand new 20MB hard disk that has 100K in bad bytes may seem bad, but if due to forced bad tracks, it boils down to just about 12 bad tracks out of 2,460, or .5 percent of all tracks. If you're optimistic, you can interpret the CHKDSK report as indicating that your dealer took the time to enter in the bad track list. Until you run out of room, you'll be glad your machine has been formatted with the most conservative approach available.

THE 80xxx PARITY FLAG

I recently discovered an anomalous result in the setting of the 80286 parity flag. Arithmetic and logical operations can, of course, be performed on either bytes or words, and the processor flags reflect the state of the byte or word result, as appropriate. For example, the sign flag matches bit 7 of the result after a byte operation, but it matches bit 15 of the result after a word operation. The parity flag, however, always reflects the parity of the lower byte of the result only, even after a word operation,

which affects the other flags according to the full 16-bit result.

I have tried this on only two processors. Has this behavior been documented anywhere? Is it a bug or was it intended? Does it vary among the '86 family members, or between manufacturers?

Bruce Frostick
Richmond, Virginia

To answer this question, I immediately grabbed my copy of *The 8086 Book*, by Russell Rector and George Alexy (Osborne/McGraw-Hill, 1980). It's an indispensable guide for any 80xxx assembly language programmer and includes complete information on opcodes, timing, and even program design and documentation.

Regarding the parity flag, the authors say: "The parity status is set to 1 when the lower-order eight bits of any data operation result has an even number of 1 bits. An odd number of 1 bits causes the parity status to be reset to 0."

The parity flag works the same in Intel's current processors as it did in the 8080, which was a real 8-bit CPU. The operation was kept consistent for the sake of upward compatibility.

SIMULTANEOUS DISPLAYS

In the March 29, 1988, edition of PC Tutor, you indicated that the original IBM PC was designed to support simultaneous operation of two display types: monochrome and color. This is exactly what I would like to do, but I have only been able to effect an either/or switch of the active display adapter with the DOS MODE command.

Is there a DIP switch configuration or some other hardware or software that would allow me to run both monitors truly simultaneously?

Charles Forrest
Champaign, Illinois

The PC BIOS and DOS employ the concept of the active monitor. Just as disk operations assume the current drive and directory by default, all video activity takes place on the active, or default, display. Just as DOS can't be told to perform all disk operations on drive A: and drive B:, it does not provide any support for sending the same output to both monitors simultaneously with a single command.

PRODUCTIVITY

■ PC TUTOR

If you're writing your own program, you can design it to display the same data on each monitor by performing two writes as two separate steps. But the lack of hardware support means that the program would have to assume the responsibility for switching the displays between writes.

If the **MODE** command isn't meeting your needs, take a look at the **DOORS** utility published in our February 5, 1985, issue. This program allows dual monitor systems to be switched between color and monochrome displays with a hotkey.

PATCHING REMOVE.COM

I use a lot of utilities from *PC Magazine*. Of these, **INSTALL** and **REMOVE** are my favorites for managing TSRs. **REMOVE**, however, requires that you hit the Enter key to peel off a layer of TSRs. That's great when you're at the DOS prompt, but when you have a menu system, there's no need.

Is there a way to patch **REMOVE** to avoid the prompt? This would allow readers to load and unload groups of TSRs automatically.

Daniel Murgio
Mendoza, Argentina

I agree. **INSTALL**, **REMOVE**, and **PCMAP** (*PC Lab Notes*, *PC Magazine*, August 1987) are three utilities I use every day to help manage my TSRs. But **REMOVE** isn't very friendly with batch files and insists on getting its keyboard input live. To help with this problem, I've devised two patches for the program.

Remember, before you try your hand at patching any program, always make a backup copy in case something goes wrong. You'll also need to have a copy of **DEBUG** either in the current directory or in a directory in your **PATH** statement.

The first patch involves replacing the **BIOS** get-a-key function with the DOS get-a-key function. This allows you to use the DOS redirection facility to feed characters from a file to **REMOVE** as if they came from the keyboard. First, enter the following commands to patch **REMOVE**.

```
DEBUG REMOVE.COM
E 204 B4 08 CD 21
W
Q
```

REMOVE will work just like it always has. Run it at the DOS prompt, and it will still ask you to press a key. But if you create a file that contains just the carriage return character and use redirection, **REMOVE** will execute without any keyboard input.

To create a response file that contains just a carriage return, enter the following commands:

```
COPY CON REMOVE.CR
```

```
^Z
```

The first line creates a file called **REMOVE.CR** and prepares to copy anything you type at the keyboard into it. The second line is blank—just hit the Enter key. The **Z** (Ctrl-Z) on the third line closes the file and is generated by holding the Ctrl key and pressing Z or hitting the F6 key. To run **REMOVE** automatically in a batch file, use the line

```
REMOVE <REMOVE.CR
```

If you're sure you'll never need to confirm a **REMOVE**, or you want to create a special batch version (you can rename the file), the following patch will remove all requirements for a response. Start with a fresh copy of **REMOVE** and type the following commands:

```
DEBUG REMOVE.COM
E 1FC EB 13
W
Q
```

For a batch operation, the list of installed TSRs and confirmation prompt that **REMOVE** produces can be eliminated by redirecting standard output to the NUL device. To do this, use the command

```
REMOVE > NUL
```

ASK THE PC TUTOR

The PC Tutor solves practical problems and explains points of general interest about using your hardware and software more productively, and answers basic questions about DOS and systems in general. To see your questions answered here, drop a line to PC Tutor, *PC Magazine*, One Park Avenue, New York, NY 10016. We're sorry, but we cannot answer questions personally.

With
Function Keys
on the left

THE NEW STANDARD IN PC KEYBOARDS

FEATURES YOU'LL LOVE:

- 12 Function Keys where they belong!
- Switchable CTLG and CAPS LOCK Keys
- 13-Key Cursor Control Panel
- 18-Key Numeric Keypad with separate key (the 102nd key)
- 12 Numeric pads to parallel in Functions
- Keys Color Coded to WordPerfect®

The World's Most Advanced Keyboard

NORTHGATE put it all together!

A spectacular new keyboard. It has 12 Programmable Function Keys AND THEY'RE ON THE LEFT. Where they belong!

Now, typing speed and productivity return. No more hunting for function keys. They're where your fingers expect. And your standard templates fit. We've even color-coded keys for WordPerfect users.

Other features galore!

You can switch the CTRL and CAPS LOCK keys so CTRL is where typists expect it to be. We supply the key-caps at no extra cost.

Typists love it. Increases in speed and accuracy of up to 30% are reported. It's the touch, the feel and the layout the computer industry has been begging for and it's available now.

► Use OmniKey/102 10 days
Return for FULL REFUND
if not 100% Satisfied!
Unlimited 3-Year Warranty

Compatible with most XT, AT and 386 type systems using standard circular DIN connector. (For details, contact your computer supplier for connector type.)

What the Pro's Say...

Gary Ray in PC Week, May 17, 1988

"REVOLUTIONARY AND MUCH NEEDED..."

"Better than any replacement keyboard ever used by this editor, it is also a viable alternative to IBM's own model... places the 12 Function Keys where God intended them to be vertically along the left side of the keyboard. Other intelligent features make the OmniKey an outstanding buy, but the major facts are these: it's durable, well-designed, sensible and has just the right feel. Best of all, it's relatively inexpensive."

Steve Gilman in InfoWorld, February 8, 1988

"FINDING THE IDEAL KEYBOARD..."

"Imagine my surprise and delight when I found myself facing my dream keyboard. If you want the best keyboard I've ever laid my hands on, check out Northgate's..."

Andrew H. Fried in Computer Shopper, June, 1988

"THE MOST COMFORTABLE KEYBOARD..."

"Once again, I would like to say that the Northgate OmniKey/102 Keyboard is probably the most comfortable keyboard... features good tactile response, they're laid out well, are attractive, and very pleasant to use."

Northgate Computer Systems
13895 Industrial Park Blvd., Suite 110

CONNECTIVITY CLINIC

Finding ARCnet's station address with BASIC; reading Ethernet's node identifications using C; terminating printer spooling in commercial programs automatically.

STOPPING PRINTER SPOOLING

Using 3Com's 3+Share to release print files works nicely for programs written in-house ("LAN Printing Tip," Connectivity Clinic, February 29, 1988). Here is a way to terminate printer spooling in commercial programs.

If the program lets you set up the printer output device, print the output to a file called LPT1. Leaving off the colon tricks 3+Share into thinking it is receiving a file, so it prints it immediately. But DOS still recognizes it as a device name, so the output goes to the printer linked to that device name.

This trick works with many popular programs. In *WordPerfect*, when you set

up your printers (Shift-F7,4,3), choose 8 for Printer Port and enter LPT1 as Device or File Pathname. Lotus 1-2-3 will not allow you to set up a filename as the global default, but when you are ready to print, type /PF (Slash Print File) instead of /PP (Slash Print Printer) and enter LPT1 (you first may need to press Esc once to clear the pathname from the command line).

Some of the more-advanced database languages, such as *DataFlex* by Data Access Corp., have a DeSpool command that may be embedded at the end of print routines, allowing automatic despooling of print files.

Robert Stockton
Surf City, New Jersey

Since DOS accepts device names with or without the semicolon, this trick is a slick way to slide a file through the print spool.

NODE ID WITH ETHERNET AND C

The program ENADR.C in Figure 1 extracts and prints the Ethernet network address for a 3Com 3C501 EtherLink card.

We use the output of this program as the input to another program that creates a DBMS key based on the Ethernet address. This key is guaranteed to be unique, since no other Ethernet card on the planet (regardless of the card's manufacturer) contains the same Ethernet address.

Dan Lasley
Cordova, Tennessee

```
#include "stdio.h"

#define L_GETEAR 6
#define L_EA (2 * (L_GETEAR + 1))
#define IE_GP 8
#define IE_SA 12
#define EA_BASE 0x300

/* bytes in binary E/N address */
/* size of ASCII E/N address */
/* xmit, station addr PROM pointer */
/* station address PROM window */
/* Ethernet adapter base address */

main()
{
    int i, byte, base = EA_BASE; /* 3C501 adapter I/O base address */

    for (i=0; i<L_GETEAR; i++) {
        outport (base + IE_GP, i); /* point to E/N address byte */
        byte = inportb (base + IE_SA); /* fetch address byte */
        printf ("%02x", byte & 0xff);
    }
    printf ("\n");
}
```

Figure 1: ENADR.C extracts and prints the Ethernet network address.

■ CONNECTIVITY CLINIC

We see here how to use C to get the same information from Ethernet cards that we will obtain in the next letter by using a BASIC programming exercise.

You don't have to force a reset on Eth-

ernet cards to read their node IDs the way you do with ARCnet cards.

This program uses the C functions output (output a word to a port) and inputb (input a byte from a port).

HYUNDAI'S NEW OFF-ROAD VEHICLE.

It uses no gas. And will drive you wild with delight. It's the new Hyundai Super-16T. A fast, powerful, affordable XT-compatible built to go the distance.

It comes fully-equipped. And even includes easy-to-use word processing, spreadsheet, database, spellchecker and communications software. What's more, it's backed by an 18-month warranty. But, best of all, Hyundai's new off-road vehicle is dirt cheap. Just \$999*

Test drive the Super-16T or one of Hyundai's other exciting off-road vehicles today. For the Hyundai dealer nearest you, call 1-800-544-7808 ext. 121.

*Suggested retail price single floppy disk drive model. ©1988 Hyundai Electronics America. XT is a trademark of IBM. CIRCLE 124 ON READER SERVICE CARD

GETTING ARCNET'S NUMBER

We use an ARCnet network that runs under Novell's NetWare. Is there any way to determine the ARCnet station address from within a BASIC program?

Roy Goldberg
New York, New York

For the benefit of readers unfamiliar with ARCnet, let me explain that every ARCnet card is assigned a number from 1 to 255 (usually through DIP switches) when it's installed. However, no two cards can have the same number. To avoid assigning duplicate numbers when you're installing new cards, you must know the number of each card already on the network. If you don't have a record of the number assigned to each card, your only alternative is to take the cover off each machine and examine the DIP switches.

If you do have a record of the numbers assigned to the adapters, you will find

■ Every ARCnet card is assigned a number when it's installed; no two have the same number.

them useful for configuring the parameters of programs as they start to run on each machine. The permanent numbers assigned to Ethernet and Token-Ring network interface adapter cards are often used for this purpose. When a program finds the number of the adapter card, it refers to a table and brings in the right video, keyboard, and other enhancement routines for that machine. In this case, we want a BASIC program to determine the identity of each machine so that we can customize other operations for the particular machine on which they are running.

We consulted with Standard Microsystems Corp., which said there is a relatively simple BASIC program that does what we want, but there's a catch. When you interrogate the card for this information, the act knocks the card off the network. This will force you to reinitialize NetWare (by

Tired of Walking Floppies?

Get rid of your tennis shoe network with ManyLink.

You need to share a document, so you walk a floppy to an associate. Or you need something printed, so you walk a floppy to someone who has a printer on their PC. Which means they have to stop what they're doing. Maybe you have a message for someone. Or just want to chat. More walking. More interruptions. More bother.

Stop walking, start sharing.

You can stop walking floppies around and start sharing documents, printers and messages—all three features—from one software package: ManyLink for PCs. It even allows you to do 5.25" and 3.5" disk conversions between PCs and PS/2s.

No other PC network is so versatile or so easy to install and run. Or so economical. You can connect two PCs with ManyLink for only \$165.

Share files while you work.

It's simple. With a couple of key-

strokes you can request a disk file from another ManyLink connected PC, then go back to your work. File transfer is accomplished "in the background"—without interrupting you or the other PC. A polite beep on your computer tells you when the file arrives. Files you don't want to share can be locked to protect data from network access.

Share printers without leaving your desk.

Send your jobs to any printer connected to a PC running ManyLink. While your job is being printed, you can continue your work because all printing—like file transferring—occurs unnoticed in the background.

Chat with another PC user.

You can send and receive brief messages to another ManyLink connected PC without leaving your application. Telephone messages,

instructions, questions or whatever...appear on your screen.

Costs that won't run away from you.

ManyLink for PCs fills your networking needs now and can grow easily and inexpensively as you expand. Each \$165 ManyLink for PC package contains all you need to make two PCs communicate: a 25' serial cable, instruction manual and software. Each additional package allows you to connect another PC, and so on. Add PCs as you want, when you want.

Take a walk (or run) to your dealer now for ManyLink for PCs. Or contact NetLine, 85 West Center, Provo, Utah 84603. Telephone: (801) 373-6000.

NetLine

Conquer the Connectivity Challenge

The Challenge

If you're of the opinion that networking lots of PCs, printers, modems and host computers together has to be complicated and expensive, we'd like to change your opinion.

Presenting SwitchLAN

SwitchLAN is a simple low-cost network. It provides "hot-key" File Transfer, Terminal Emulation and Printer Sharing at a cost of about \$150 per PC.

Easy Does It

Installing SwitchLAN is a snap. It uses telephone type twisted-pair wiring and the serial COM port already in your PCs. You don't need to buy expensive network servers, install network boards in every PC, or struggle with coax cable.

Using SwitchLAN is as easy as installing it. Extensive help and pull-down menus are provided so people don't have to be network gurus to use it.

Challenge Us

Don't take our word for it. Call for more information or a free demo disk. With SwitchLAN you can turn a Connectivity Challenge into Child's Play.

PRODUCTIVITY

■ CONNECTIVITY CLINIC

running Anet3 or IPX plus Net3).

The listing for this program is

ARCNET CARD MODE ID

```
10 CLS:KEY OFF
20 DEF SEG=>ANDSEG
30 OUT &S2E8, 0:REM FORCES A RESET
40 FOR I=1 TO 1000
50 J = I
60 NEXT I
70 J = PEEK(0):REM CHECK RAM BUFFER
80 IF J<>AND1 THEN 40:REM LOOK AGAIN
90 K=PEEK(1):REM READING NODE ID
100 PRINT "THE ARCNET NODE ADDRESS OF"
110 PRINT "THIS STATION IS ",K
120 END
```

You can download this program from PC MagNet (see the sidebar "SETMODE by Modem" in this issue's Utilities column).

No matter what application you have in mind, I suggest that after the program finds the identification number, you write that number to a file that can be read by subsequent programs. If this isn't acceptable, individual users can run Novell's UserList program to display the identity of active nodes. In the BASIC program shown, you must set the value in line 20 to the hex address of the RAM buffer. &HD000 is the typical value, but try &HC000, &HCC00, &HDC00, or &HE000 if that doesn't work.

You set the ARCnet board's base I/O hex address, plus 8 bits, in line 30. The typical hex values of &H2E0 and &H300 become &H2E8 and &H308.

The OUT command in line 30 forces a reset of the ARCnet card. This reset forces the card to transmit its node ID number, but it also drops the card from the network.

The loop and PEEK in line 70 is a routine that looks for D1, the reset complete indicator, in the RAM buffer. If that indicator is present, line 90 reads the node ID in the second byte.

NETWORK YOUR QUESTIONS

Connectivity Clinic gives you practical solutions to networking problems of all types. We'll pay \$50 or more for any tips we print, plus an extra \$25 if you submit your letter on a disk, and we'll gladly answer any questions you have, at no charge. We're sorry, but we're unable to answer letters personally.

Mail your contributions to Connectivity Clinic, PC Magazine, One Park Avenue, New York, NY 10016, or you may contact Frank J. Derfler, Jr., via MCI Mail (be sure to use Derfler's box named CONNECTIVITY CLINIC).

The Hard Drive Specialists.

"Lifetime Memory Products looks like one of the better mail-order sources for fixed disks. You not only get good hardware, you

also get your money's worth in terms of warranty, technical support, and good treatment from the sales staff."
- Walt Rowinsky, PC Magazine Dec. 8, 1987

FOR YOUR AT® OR COMPATIBLE

Introducing the Seagate 5T251-1: 40 megabytes and 30ms access time at an incredible price. Features half-height, 5.25-inch size.

The Kit Includes:

- Seagate Model 5T251-1 hard drive
- Installation manual
- Cable
- Lifetime Backup Utilities and manual

40MB Seagate, 28ms\$459

FOR YOUR PC/XT® OR COMPATIBLE

The new MiniScribe® 3650: 40 megabytes of fast-access (61ms) storage space at a fraction of the cost of two 20MB drives.

The Kit Includes:

- MiniScribe Model 3650 hard drive
- Installation manual
- Hard drive controller and cables
- Lifetime Backup Utilities and manual

40MB MiniScribe, 61ms\$399

AT DRIVES: Our AT drives come with data cable, mounting slides and manual for quick installation.

FOR A COMPUTER SYSTEM THAT C LOOK TO FIVESTAR WHERE THE F

FIVESTAR computers will consistently out-perform your most demanding expectations, providing solutions for all your computing needs. When you boot up your FIVESTAR system, you'll discover performance-orientation and advanced capabilities that offer a price/value relationship unmatched in the industry.

SOLUTIONS BUILT ON QUALITY AND SERVICE.

FIVESTAR has built one of the most advanced facilities in the U.S., staffed with highly skilled technicians and R&D specialists. Every system is fully tested and certified with a 48-hour burn-in before shipment. FIVESTAR's

team of knowledgeable direct marketing consultants will help you select the best system for your business needs. And once you've made your purchase, FIVESTAR's toll-free 800 service number will provide quick and easy access to any support you may need. You can count on FIVESTAR to solve most problems in a matter of minutes over the telephone.

FREE ON-SITE SERVICE, AND MORE.

Every FIVESTAR computer system (CPU, disk drives, monitor and keyboard) comes with a FREE annual on-site service contract that completely covers all parts and labor. Most on-site service calls are made in less than 24 hours; and, together with the FIVESTAR Warranty, you receive the most comprehensive service policy available on the market today.

INTRODUCING FIVESTAR LEASING.

FIVESTAR leasing offers 100% financing on any system purchased. You will benefit from having a low monthly fixed payment, while enjoying the full use of your leased equipment. You also have the flexibility of upgrading your system, without penalty, at any point during the lease term.

IT ALL ADDS UP TO THE FIVESTAR ADVANTAGE.

When you buy from FIVESTAR, you buy with the confidence that you're paying for quality technology and manufacturing. From a powerful single system to a multi-user environment, FIVESTAR offers the ability to perform with spectacular success through even the most intensive multi-tasking and networking applications. Call FIVESTAR Computers today and put the FIVESTAR advantage to work for you.

PC Magazine's Direct Marketing Connection

For PC Products and Services

For many of you, mail order is your primary means of purchasing PC products and services.

In fact, in recent interviews with our subscribers, we learned that 70% bought PC products and services through direct marketing channels during the past year.*

You buy direct because it's convenient, because you know exactly what you want and don't need any hand-holding.

The following special section, PC Magazine's Direct Marketing Connection, is what you've been demanding. It connects you with the direct marketers who are anxious to please you. By having them all in one place, you can quickly zero in on the products you need from the vendors you want to buy through.

*Starch Study, July 1986

Designer Carry Case for Laptops: Extra pockets for portable printer, battery pack, pocket modem, manuals & software etc. Comes with handle and shoulder strap. Fits NEC EL & HD and all Toshiba Laptop (except T3200).

Only 149 With any Laptop 130

TOUCH BASE Systems World Port Modems. Both 1200 & 2400 use battery. Operate on Bell and CCITT standards. 2400 includes AC Adapter and Canon COPY PLUS comm. sw. Comes with 25 pin female connector. For Toshiba adapter cable, add \$0.

1200/2400 179/217 With any Laptop 1200/2400 160/260

WonUnder: Single Card Expansion slot for Toshiba Laptop. Supports most Toshiba compatible cards of 10" or less such as LAN and EGA cards. If all you need is one expansion slot, this is your low cost alternative to expansion chassis. Specify T1100+, T1200 or T3100/T5100.

Only 299 With any Laptop 270

NOVATION Permit 1200 External modem. World's smallest (size of an audio cassette) and first to work from phone line. Does not require any batteries or power from computer. Includes comm. software. Comes with 25 pin female connector. For Toshiba adapter cable, add \$0.

Only 129 With any Laptop 99

Great Software for your PC - \$2 per disk (Reg. \$6)

We are making this special offer to introduce you to membership in PC-SIG: The World's Largest Source of Low Cost Software for the IBM-PC and compatibles. PC-SIG disks are normally \$6 each (less with membership) and come packed full of Shareware - software marketed in the revolutionary new way that allows you to try out a program before registering it with the author. PC-SIG provides your gateway to this software with the bimonthly SHAREWARE Magazine, HotSheets and a 424+ page software directory. All this for a yearly membership fee of \$20 (USA).

Some of the advantages of buying from PC-SIG: We are the oldest and largest Shareware vendor. Our disks are the latest versions. Free technical support by phone. Most complete library of Shareware: over 1000 disks. 48 hour shipping.

Join PC-SIG and receive 424 page directory, bi-monthly Shareware Magazine, HotSheets and special discounts.

**Take any disk listed in this ad -
\$2 each - when you join today!
Offer expires July 31, 1988.**

Communications

- ☐ 499 PROCOMM: Extremely versatile telecommunications.
- ☐ 310.1022.1023 Q-MODEM: A favorite. Let's your computer talk via phone.
- ☐ 212.334.621 RBBS-PC: Set up your own bulletin board.

Computer Languages Education

- ☐ 577. 578 C TUTOR: Learn C language.
- ☐ 965 PASCAL COMPILER: Full-screen editor, incremental compiler and more.
- ☐ 254 PC-DOS HELP: Gives you on-line help to remember those DOS commands.
- ☐ 105 PC-PROFESSOR: Learn beginning BASIC.
- ☐ 775-778 PSEUDOSAM: Macro assemblers & debuggers for many popular microprocessors, including 8086/85/286.
- ☐ 481 STILL RIVER SHELL: Menued DOS commands. Makes life easier.
- ☐ 403 TUTOR COM: Learn beginning DOS.

Databases

- ☐ 287.288 FILE EXPRESS: Customize, menu driven data base.
- ☐ 5, 730, 1015 PC-FILE+: The most powerful and popular data base.
- ☐ 630 WAMPAC: dBase III clone, but easier to use (Hard disk req).

Educational

- ☐ 844 ABC FUN KEYS: For ages 2-5. Teaches the alphabet.
- ☐ 612 FOREIGN LANGUAGES: Beginning Spanish, French, German & Italian.
- ☐ 229 FUNNELS & BUCKETS: Fun game teaches younger children arithmetic.
- ☐ 320 PC-TOUCH: Typing tutor. (Color Req)
- ☐ 477 WORDGAMES: Stimulates the intellect.

Financial

- ☐ 164, 773 CASHTRAC: Manage checking accounts, track investments.
- ☐ 151 FINANCE MANAGER II: Double entry bookkeeping.
- ☐ 468.470 MR. BILL: Itemize invoices, age accounts, etc.
- ☐ 331 PC-GENERAL LEDGER: Written by a top financial manager.
- ☐ 575 PC-STOCK: Track & evaluate stock trends. (Color req)

Games

- ☐ 452 AMULET OF YENDOR: Hack, a dungeons & dragons adventure game.
- ☐ 708 BACKGAMMON: You against the computer. Also, Wheel of Fortune.
- ☐ 780 BRIDGE PAL: Computer plays 3 hands.
- ☐ 228 CRIBBAGE: And a few other games as well.

- ☐ 457 GREATEST ARCADE GAMES: Flightmare, Jump Joe, Spacewar (Color req.)
- ☐ 476 PATRICK'S BEST GAMES: Bugs Centipede, 3-D Packman, Castle, Packal, Spacewar.
- ☐ 557 PINBALL RALLY: 3 great games of dexterity and speed. (Color req.)
- ☐ 120 PC-CHESS: Your move.
- ☐ 751 POKER: Play draw poker head to head. Or try some Blackjack.
- ☐ 694 SLEUTH: A murder has been committed.
- ☐ 187 TWO TREKS: Beam me up, Scottie!
- ☐ 681 WHEEL OF MISFORTUNE: Spin the wheel, win or go bankrupt!

Graphics

- (Most require CGA or EGA Card)
- ☐ 701-704 DANCAD 3D (4 disks): Create and animate 3d drawings. (Hard disk req)
- ☐ 828 EDRAW: Draw flowcharts, schematics, even printed circuits!
- ☐ 783 FINGER PAINT: A 3d wire frame modeling program (Runs also with Hercules Card.)
- ☐ 610 HGCOLOR: Run color graphics programs with your Hercules Card!
- ☐ 788 IMAGE 3-D (EGA ver.): Create, view, edit 3d objects.
- ☐ 762 IMAGE 3-D (JGA ver.)
- ☐ 1001 MAC PASTE: Read, save, edit and print Readmac or Mac Paint pictures.
- ☐ 344.345 PC-KEYDRAW: Graphics and "slideshow" presentations.
- ☐ 244 SLIDE GENERATION: Create slides/transparencies.

Home & Hobbies

- ☐ 966 ASTROLOGY 94: Calculate and print charts.
- ☐ 361, 632 FAMILY HISTORY: Trace your family tree.
- ☐ 929 LOTTO: Will this really help you win the lottery?
- ☐ 395 HOME INVENTORY: Keep track of everything you own.

Music

- ☐ 127 PC-MUSICIAN: Compose and play your song.
- ☐ 279 PIANOMAN: Plays your music or its own in chords.

Office

- ☐ 609 AUTOMENU: Create easy access menus for your hard drive.
- ☐ 624 DESK COMMANDO: Tools to tame your hard drive.
- ☐ 404 EZ-FORMS: Create your own business forms.
- ☐ 386 FORM LETTERS: Variety of business letter formats.
- ☐ 483 MAILMASTER: Add, edit, sort and print labels by categories.
- ☐ 405 PC-DESK TEAM: In memory calculator, calendar, phone dialer, alarm & more!

Printers

- ☐ 517 IMAGE PRINT: Letter quality from your dot matrix.
- ☐ 718 LQ PRINTER: Print letters on your dot matrix.
- ☐ 523 SLOWWRITER: Print banners or wide spreadsheets.

Religion

- ☐ 874 BIBLE QUIZ PLUS: Learn the Bible trivia game.
- ☐ 756-772 THE BIBLE (7 disks): King James version.
- ☐ 581, 582 WORD WORKER: Performs text searches of words in the Bible.

Security Hacking

- ☐ 588 MASTER KEY: Like Norton Utilities. Recover lost files, etc.
- ☐ 414 UNPROTECT/PROTECT: Copy a variety of copy protected disks.

Spreadsheets

- ☐ 524.525 EXPRESS CALC: Powerful but friendly spreadsheet.
- ☐ 199.1016.1017 PC-CALC: Like Lotus 1-2-3 but easier.

Word Processing

- ☐ 719 LETTER WRITER: Print out "personalized" letters.
- ☐ 526 NEW YORK WORD: Allows split screen, mail merge & more.
- ☐ 480 PC-OUTLINE: Like ThinkTank. Organize your ideas & thoughts.
- ☐ 455.561.682 PC-TYPE: Jim Buton's own word processor. Has it all.
- ☐ 78, 627 PC-WRITE: Powerful, multi featured, spelling checker, laser support.

Please send the disks I have checked above.

ENHANCED GRAPHICS ADAPTOR \$149.95
100% IBM COMPATIBLE. PASSES IBM EGA DIAGNOSTICS
• 256K OF VIDEO RAM ALLOWS 640 X 350 IN 16 OR 64 COLORS
• COMPATIBLE WITH COLOR AND MONOCHROME ADAPTORS
MCT-EGA

COLOR GRAPHICS ADAPTOR \$49.95
COMPATIBLE WITH IBM GRAPHICS STANDARDS
• SUPPORTS RGB, COLOR & COMPOSITE MONOCHROME
• 640 X 350 X 200 RESOLUTION. LIGHT PEN INTERFACE
MCT-CG

MONOCHROME MULTI I/O \$119.75
TOTAL SYSTEM CONTROL FROM A SINGLE SLOT
• CTRL 2 FLOPPY 5 SERIAL PARALLEL GAME PORT
CLOCK CAL. RUN COLOR GRAPHICS SOFTWARE ON A MONOCHROME MONITOR
MCT-MIOMO

MULTI I/O FLOPPY CONTROLLER \$79.95
A PERFECT COMPANION FOR OUR MOTHERBOARDS
• SUPPORTS UP TO 2 360K FLOPPIES 720K WITH DOS 3.2
• SERIAL PARALLEL GAME PORT CLOCK CALENDAR
MCT-MIO
MCT-SERIAL-2ND SERIAL PORT \$19.95

MULTI I/O CARD \$59.95
USE WITH MCT-FH FOR A MINIMUM OF SLOTS USED
• SERIAL PORT CLOCK CALENDAR WITH BATTERY BACK-UP
• PARALLEL PRINTER PORT ADDRESSABLE AS LPT1 OR LPT2
MCT-MO

AT MULTIFUNCTION CARD \$139.95
ADDS UP TO 3 MB OF RAM TO YOUR AT
• USER EXPANDABLE TO 1 GB OR 3 MB WITH OPTIONAL FIBROBACK BOARD (B NOT INSTALLED)
• INCLUDES SERIAL AND PARALLEL PORT
MCT-ATMF-MC FIBROBACK BOARD \$29.95
ATMF SERIAL-2ND SERIAL PORT \$24.95

AT MULTI I/O CARD \$59.95
USE WITH MCT-ATFH FOR MINIMUM OF SLOTS USED
• SERIAL PARALLEL AND GAME PORTS
• USES 16450 SERIAL SUPPORT CHIPS FOR HIGH SPEED DPS
MCT-ATIO
ATIO-SERIAL-2ND SERIAL PORT \$24.95

576K RAM CARD \$59.95
A CONTIGUOUS MEMORY SOLUTION IN A SHORT SLOT
• USER SELECTABLE CONFIGURATION UP TO 576K
• USES 8K X 256K RAM CHIPS (ZERO K INSTALLED)
MCT-576K

EXPANDED MEMORY CARD \$129.95
2 MB OF LOTUS INTEL MICROSOFT COMPATIBLE MEMORY FOR AN AT • CONFORMS TO LOTUS INTEL EMS • USER EXPANDABLE TO 2 MB • CAN BE USED AS EXPANDED OR CONVENTIONAL MEMORY. RAMDISK AND SPOOLER
MCT-EMS
MCT-ATEMS AT COMPATIBLE VERSION \$139.95

RLL DISK CONTROLLER \$119.95
RLL HARD DISK CONTROLLER FOR YOUR AT COMPATIBLE
• SUPPORTS UP TO TWO RLL HARD DRIVES
• IMPROVES DATA STORAGE SPEED AND EFFICIENCY
MCT-RLL

ATFH CONTROLLER \$149.95
FLOPPY HARD DISK CONTROL IN A TRUE AT 5.25" VERSION
• SUPPORTS UP TO 2 360K 720K 1.2MB FDS AS WELL AS 3 HD'S USING STANDARD CONTROL TABLES
MCT-ATFH

intel

INBOARD 386/PC \$895.00

UPGRADE YOUR XT TO A 386 FOR LESS THAN \$1000
• 16 MHz PROCESSOR REPLACES 8088 • 1 MB INSTALLED • EXPAND TO 3MB WITH FIBROBACK CARD
• 3 YR WARRANTY

INBOARD 386 AT ABOVE BOARD PS 286 \$1199.95
ABOVE BOARD PS 286 \$399.95

12 MHz AT COMPATIBLE \$1034.20

INCLUDES: 12 MHz BABY AT MOTHERBOARD, 256K RAM MEMORY, 800W AT CASE, 8-PIN POWER SUPPLY AT STYLE KEYBOARD, 1.2 MB FLOPPY DRIVE, FLOPPY-HARD DRIVE CONTROLLER, MONOCHROME MONITOR, GRAPHICS ADAPTOR

10 MHz XT COMPATIBLE \$599.00

INCLUDES: MOTHERBOARD, 256K RAM MEMORY, 135 WATT POWER SUPPLY, FLIP-TOP CASE, AT STYLE KEYBOARD, 360K FLOPPY DRIVE, MONOGRAPHICS I/O CARD, ENHANCED AT STYLE KEYBOARD, 1.2 MB FLOPPY DRIVE, PORTS, CLOCK CALENDAR AND GAME ADAPTOR. RUNS COLOR GRAPHICS ON A MONOCHROME MONITOR

16 MHz 1 MB 386 \$2298.65

INCLUDES: MYLEX 386 MOTHERBOARD, 1 MB RAM ON BOARD, 350 WATT POWER SUPPLY AT STYLE CASE, ENHANCED AT STYLE KEYBOARD, 1.2 MB FLOPPY DRIVE, AT FLOPPY-HARD CONTROLLER, MONOCHROME MONITOR, MONOGRAPHICS CARD

MOTHERBOARDS

10 MHz SINGLE CHIP XT \$129.95

Landmark AT speed 4.1 MHz Norton S1.2
• SINGLE CHIP USES LESS POWER, IMPROVES RELIABILITY
• KEYBOARD SELECTABLE SERIAL, 8 17 MHz-16 MHz
• RESET SWITCH, KEYLOCK AND SPEED-POWER INDICATORS SUPPORTED
MCT-TURBO-16

80286 6 MHz \$379.95

Landmark AT speed 8.0 MHz Norton S1.7
• 8 SLOTS (2 8 BIT & 6 BIT) AT MOTHERBOARD
• HARDWARE SELECTION OF 6.6 MHz 11 MATH STATE
• KEYLOCK SUPPORTED, RESET SWITCH, FRONT PANEL LED INDICATOR
• BODGET'S FOR 1 MB OF RAM AND 80287
MCT-AT86

12 MHz MINI 80286 \$399.95

Landmark AT speed 12.2 MHz Norton S11.6
• 8 SLOTS (2 8 BIT & 6 BIT) AT MOTHERBOARD
• HARDWARE SELECTION OF 6.6 MHz 11 MATH STATE
• KEYLOCK SUPPORTED, RESET SWITCH, FRONT PANEL LED INDICATOR
• BODGET'S FOR 1 MB OF RAM AND 80287
MCT-AT86

16 MHz MYLEX 80386 \$1648.00

Landmark AT speed 24.0 MHz Norton S118.0
• 1 MB RAM ON BOARD, 4 MB VERSION AVAILABLE (HOW-EVER UPGRADEABLE)
• 8 SLOTS, 2 8 BIT & 6 BIT
• SUPPORTS 80387 MATH CO-PROCESSOR
• SUPPORTS 80387 W/ ADAPTOR CARD (\$149.95)
• 64 KB CACHE FOR NEAR 0 WAIT STATE
MCT-38688

MCT-386B30 30 MHz VERSION, 1 MB \$2248.96

WE OFFER TECH SUPPORT AND WARRANTY SERVICE

CIRCLE 520 ON READER SERVICE CARD

This Section Is For Serious Buyers

We've rounded up all the direct marketers who want your business and made it easier for you to find them in our Direct Marketing Connection.

Now you can quickly find the right PC products and services, the right price and the right vendor, right here in this special section.

FOR HARDWARE MARKETERS, THE WORD IS PC MAGAZINE PULLS BEST

Your competitors know a good thing and they're sticking with PC Magazine. So should you, on a regular basis. Why?

For one thing, 70% of PC Magazine subscribers plan to buy or authorize the purchase of *printers* in the next 12 months.* PC Magazine is the most cost efficient way to sell PC products and services, whatever you market. You get bigger reach, more pull, and 15% off the general advertising rate. Can you afford not to be in every issue?

*1987 Plan to Buy Study

**PC
MAGAZINE**

One Park Avenue
New York, NY 10016
(212) 503-5100

New dimensions in Bible study.

We're celebrating over 5 years of market leadership! Version 4.0 of **THE WORD** processor includes the complete text of the KJV or NIV Bible for just \$199.95. Our software searches for any word or text string. You can even create indexes on concepts and build your own library of research material.

Our new **INSTANT ACCESS** add-on product for just \$49.95 finds any word instantly! And our family of products is still growing with topical cross references and personal commentary to annotate your Bible, and Greek and Hebrew transliterations which include Strong's Concordance.

CIRCLE 149 ON READER SERVICE CARD

Bible Research Systems (512) 251-7541
2013 Wells Branch Parkway, #304, Austin, Texas 78728

For more information, call (512) 251-7541. Some programs also for Apple II, C64, TRS-80, CPM.

Genealogy **\$79.00**

Lineage Master® & Genealogy Data Base Manager
Call GeneeLogic Systems Toll Free 1-800-222-9409

If you are looking for fast convenience, user friendliness, intuitive logic and flexible power, Lineage Master® is for you! Self tutoring while you are learning, gets you up to speed fast. Automatically bypasses tutoring as you learn its commands. No wasted time with endless menus and conflicting data access regimens. Lineage Master® allows you to work the way you think. Flexibility! All family lineage is automatic, no need to remember record numbers!

Lineage Master® is by far the most productive genealogy program available on the market today. Increase your productivity over other genealogy programs you might be using. Lineage Master® will accept data from most other popular genealogy data bases.

Lineage Master® has features you will love!

- Command driven with prompts, access all functions with one or two key strokes.
- Confirmed sensitive on-screen helps
- Automatic family lineage
- Browse among individuals, families intuitively
- Electronic Scratch Pad stores selected records for later recall
- Automated record deletion and reindexing
- Auto Child Sorter, children are always in chronological order
- Jump quickly to any record
- Offspring names and places when adding new records. Avoid redundant data entry
- Find records FAST, even in large data bases by partial spellings
- Matrimonial and Adoptive pedigrees
- User defined events, change default events to match your needs
- Source citations, event linked documentation
- Event linked notes
- Document both families and individuals
- Instant name sorting, even in large data bases
- Report Generation: single, batched and continuous reports
- Print pedigree, associated family groups and documents all from a single command
- Reports
 - Family Groups (cross referenced to pedigrees)
 - Pedigrees automatically numbered
 - Alpha sorted individuals
 - Alpha sorted marriages
 - User defined reports, design your own reports
 - LDS submissions
 - Print reports within selected alpha or numeric ranges
 - Many more
- LDS GLDCCM standard compatible
- Date free compatible with DNAS II & III
- Runs on PC-DOS/MS-DOS, CPM
- Up to 46,336 person capacity

• FREE UPGRADES FOR 1 YEAR!

We guarantee you will prefer Lineage Master® over any other genealogy program. Take Lineage Master® for a test drive today. If your time is worth anything, at only \$79.00, Lineage Master® is a bargain over other genealogy software at any price.

Endorsed by the British Heritage Forum and professional genealogists
Approved for submissions to the LDS Family History Department.

HOW TO SUCCESSFULLY BUY THROUGH MAIL ORDER AND PROTECT YOUR RIGHTS

Mail order sales are governed by rules of the Federal Trade Commission (FTC) and various state laws. These guidelines are published as a service to you. Remember, the many vendors advertising in PC Magazine are eager to serve your needs.

FTC rules say:

1. The Seller must ship your order within 30 days of receiving it, unless the advertisement clearly states it'll take longer.
2. If it appears that your order will not be shipped when promised, the Seller must notify you in writing in advance of the promised date, giving a definite new date, if known, and offering you the opportunity to cancel the order with a refund or consent to a definite delayed shipping date or an indefinite delay.
3. The Seller's notice must contain a stamped self-addressed card or envelope with which you can indicate your preference. If you don't respond to this notice, the Seller may assume you agree to the delay, but must either ship or cancel your order within 30 days after the original

shipping date promised or required. A prompt refund must be made when an order is cancelled.

4. Even if you've consented to an indefinite delay, you retain the right to cancel the order at any time before the item has been shipped.

5. If you choose to cancel an order, that has been paid for by check or money order, the Seller must mail you a refund within seven business days. If you cancel an order for which you paid by credit card, the seller must credit your account within one billing cycle following receipt of your request. Store credits or vouchers in place of a refund are not acceptable.
6. In the event that the item you ordered is unavailable, the Seller may not send you substitute merchandise without your express consent.

TIPS WHEN ORDERING

When ordering by mail:

State precisely what merchandise you want, specifying details such as model, make, size, component parts, etc.;

Confirm the price and expected delivery date as stated in the ad;

Indicate whether you will accept a substitute product if the item you ordered is unavailable, and, if not, that your payment should be returned;

Don't send cash, you will have no record of payment if a problem arises, and;

Keep a copy of your order and all other correspondence with the Seller. Your records should include the company's name, address and phone number; a description of the item ordered; your cancelled check or a copy of the money order; record of the date you mailed the order; and any sales slips and shipping receipts.

When ordering by phone:

Note the time and date of your conversation and the name of the person you talk with;

Make a record of your order, the price, its promised availability and the components to be expected;

Save all correspondence associated with your order, including your cancelled check or a copy of the money order, and any written confirmation sent by the Seller.

Questions you should consider asking:

Does the advertised item come with all necessary parts and accessories? Are they from the same manufacturer?

Is it available for immediate shipping? If not, when will

it be available?

Has there been an increase in the advertised price?

What warranties does the item carry? Who provides the service?

What is the Seller's return policy?

What is the Seller's refund policy?

With whom should you correspond if there is a problem?

IF YOU HAVE PROBLEMS:

1. If you have not received your order as promised or if the item is defective, immediately notify the Seller in writing referring to your order by description, price, date, as well as by account number and order number, if available. Make sure you keep a copy of the letter.

2. If you complain by telephone, send a follow-up letter to confirm what was said.

3. If you think the merchandise is defective, reread your product instructions and your warranty carefully to be sure you don't expect features or performance the product isn't designed to give. Then contact the Seller for instructions. Don't return it to the Seller until you have been instructed to do so.

4. When returning merchandise make sure you keep the shipper's receipt or packing slip; your right to be reimbursed for postal cost is determined by store policy.

5. If you have completely discussed your problem with the Seller and are still not satisfied, write to the consumer complaint agency in the Seller's state. If you paid for the merchandise by credit card, you may have rights to withhold payment under a Federal law called the Fair Credit Billing Act.

General Ledger

The old general store sold everything from A to Z. Now there is a retail software system that controls every type retail business from Apparel stores to Zoo gift shops. The General Store system is a reliable, field proven business tool, developed by retail management and computer professionals, successfully serving dozens of different retail businesses. Best of all, it is a complete multiuser business system providing online credit card authorization and support for bar code scanning, electronic cash drawers and specialty receipt printers. For a limited time only \$995. Visa and Mastercard accepted. Dealer inquiries invited.

THE DEPARTMENT STORE OF RETAIL SYSTEMS

TRACK TIME. CAPTURE CASH. NO SWEAT.

Perfect for attorneys, accountants, consultants, and ALL service professionals. By automatically tracking time and expenses, TIMESLIPS III gives you faster and more accurate billing. The ability to recover cash that could have been left through the cracks. And a better handle on your own productivity.

- Memory resident, uses 60K RAM
- Tracks time with a "stop-watch"
- Batch enters time/expense data
- Thousands of custom bill formats
- Generates custom financial reports
- Exports data to spreadsheets and databases
- Auto backup, built-in macros

• Optional "Accounting Link" software bridge makes TIMESLIPS III compatible with Dac-Easy, Peachtree, Great Plains, and many other accounting packages.

(Rated 9.3 by InfoWorld)

"TIMESLIPS is the best time and billing system at any price."

Relational Database Management with QuickBASIC

db/LIB's 3 application-building libraries expand your QuickBASIC into full-function programmable DBMS.

- ✓ **High-powered assembly routines link to QuickBASIC:**
 - Create, read, write data files with billions of records.
 - Instant file access with full B-tree indexing system.
 - Conform to dBASE III+ NDX and DBF file standard.
 - Compact, completely tested and full documented.
- ✓ **Complete Data Management programs w/Basic source:**
 - Create, Browse, List, Index, Append, & seven more.
 - Run stand-alone or merge into your own programs.
- ✓ **Built-in Database Query Language saves days of coding:**
 - Dynamically selects and formats record output.
 - Understands dBASE or Basic expressions.

db/LIB is only \$139 complete.

TURBOCHARGE YOUR KEYBOARD

EXPERT KEY saves you keystrokes. Type long words/phrases only once. From then on you only need a few keystrokes. It's all automatic. No macro keys to program or remember. Just a single Hot Key. How? Expert Key LEARNS your words from the keyboard and screen. As you start typing a word, a highlighted guess pops up - a smart guess, right at the cursor. Just hit the hot key and the word is complete, or keep typing and the guess is gone. It's fun & never gets in your way. Learns editing sequences and recalls previous command lines. 30 day guarantee for PC/XT/AT. \$65 SPECIAL (Reg. \$95) + \$3 S&H. CA res add 5%.

DataCrypt

From the Creators of PROTECT

DataCrypt - 1) A unique and unbreakable software encryption system designed to provide **BUSINESSES, GOVERNMENT AGENCIES and INDIVIDUALS** with **TOP LEVEL SECURITY** while retaining, receiving and transmitting classified information.

- Coded data is unbreakable (exceeds Data Encryption Standard)
- No "back door." Cannot be reverse engineered or "jammed"
- Menu driven and user friendly with on-line tutorial
- Encodes all types of files at speeds up to 100K cpm
- Every system produces unique codes based on unique keys
- Full control over encryption keys provides endless security
- Authentication, audit trail, verification, scanners and more

DataCrypt, the ultimate security system, can be obtained for \$249 or - inquire about a site license.

For TOP LEVEL security call **PC IDEAL** today at 1-800-634-5641 or - send check/money order to:

PC IDEAL, Inc. Executive Suites
650 Sentry Park, Suite #1, Blue Bell, PA 19422

"Finally, an IDEAL data security solution, **DataCrypt**."

HANDS OFF THE PROGRAM™ PC SECURITY

HANDS OFF THE PROGRAM is an all software, password based security utility that prevents unauthorized access of your PC's subroutines, files, and data drives.

HANDS OFF THE PROGRAM provides a sophisticated technique to separate up to 16 users of a PC, by privilege, into their own separate areas on the hard disk. Users may access only their own areas and any other area protected with a lower privilege.

HANDS OFF THE PROGRAM prevents loss on your hard disk by preventing unauthorized users from modifying the DOS file attributes (Read Only, hidden, system). For example, use the **READ ONLY** attribute to prevent user programs from modifying your system.

HANDS OFF THE PROGRAM restricts access to your hard disk by "locking" a "locked" hard disk may not be loaded, accessed by applications software or formatted via the **DOS FORMAT** command until it is "unlocked".

HANDS OFF THE PROGRAM incorporates advanced security techniques on PC's running **PC-DOS V3.0** or higher. The **DOS FORMAT** or **Drive C** is prevented while the PC is in use. The security manager is protected against Command Break and a best from floppy results in the automatic locking of Drive C.

- HANDS OFF THE PROGRAM** also provides:
- Disk Encryption
 - User Access Restricting
 - Stage Command Volumes
 - Read Only and Execute Only privileges by user
 - Auto Installation

BIG INFORMATION

**IT'S AS
EASY AS
1, 2, 3**

1 Fill in your name and address and check off your answers to the eight research questions. (One card per person, please.)

2 Circle the numbers on the card that correspond to the ads or articles you'd like more information about. (Numbers for advertised products are repeated in the Advertiser Index as well.)

3 The literature will be mailed to you from the advertiser free of charge.

Valid after October 31, 1988

1. In which of the following sectors does your organization operate? (Check one.)

- a. ☐ Private Industry
b. ☐ Government
c. ☐ Education

2. Your primary job function is (check one):

- d. ☐ MIS/DPE Communications Systems, Programming
e. ☐ Engineering/R&D
f. ☐ Financial/Accounting
g. ☐ Marketing/Sales
h. ☐ Administrative/General Management

3. Is your company a reseller?

- i. ☐ Yes
j. ☐ No

4. For how many IBM PCs and compatibles do you specify brands of products?

- k. ☐ 10 or less
l. ☐ 11-25
m. ☐ 26-100
n. ☐ 100 or more

5. Are any PCs in your office?

- o. ☐ Linked to mainframe
p. ☐ Linked to mini
q. ☐ Networked together

6. Does your company own

- r. ☐ Mainframe(s)
s. ☐ Mini(s)

7. Do you plan to buy

- t. ☐ Now
u. ☐ In 4 to 6 months
v. ☐ In 6 to 12 months
w. ☐ No definite plans

8. Number of employees in your entire company?

- x. ☐ 25 or less
y. ☐ 26-99
z. ☐ 100-499
1. ☐ 500-999
2. ☐ 1000 or more

Valid after October 31, 1988

1. In which of the following sectors does your organization operate? (Check one.)

- a. ☐ Private Industry
b. ☐ Government
c. ☐ Education

2. Your primary job function is (check one):

- d. ☐ MIS/DPE Communications Systems, Programming
e. ☐ Engineering/R&D
f. ☐ Financial/Accounting
g. ☐ Marketing/Sales
h. ☐ Administrative/General Management

3. Is your company a reseller?

- i. ☐ Yes
j. ☐ No

4. For how many IBM PCs and compatibles do you specify brands of products?

- k. ☐ 10 or less
l. ☐ 11-25
m. ☐ 26-100
n. ☐ 100 or more

5. Are any PCs in your office?

- o. ☐ Linked to mainframe
p. ☐ Linked to mini
q. ☐ Networked together

6. Does your company own

- r. ☐ Mainframe(s)
s. ☐ Mini(s)

7. Do you plan to buy

- t. ☐ Now
u. ☐ In 4 to 6 months
v. ☐ In 6 to 12 months
w. ☐ No definite plans

8. Number of employees in your entire company?

- x. ☐ 25 or less
y. ☐ 26-99
z. ☐ 100-499
1. ☐ 500-999
2. ☐ 1000 or more

Announcing P

PC MagNet is the exciting, new, trouble-free on-line information service that gives you non-stop interaction with *PC Magazine*. Imagine what that means: no longer is your magazine a one-way street. You can download utilities, get more information, find articles in back issues, and connect with *PC Magazine* editors and other readers – at your convenience. Best of all, when you call PC MagNet it's a local dial-up.

The News Gets Better.

PC MagNet is administered by CompuServe, the world's largest commercial on-line information service. All you need is a modem. If you are currently a member of CompuServe, simply type GO PCMagNet at the prompt.

Powerful Free Utilities

PC Magazine's utilities have gained worldwide fame for their speed, power, and ease of use because they help you work faster, better, and smarter. You can move and copy information swiftly and efficiently. Sift through directo-

ries easily. Create pop-up help screens. *PC Magazine's* unique programs can help you do all that and much more.

Enjoy Real-time Interaction With Other Readers

Interact with other readers in your specific area of interest. Share a program modification with your peers; unravel, discover, solve, explain, or unlock questions or problems. Like *PC Magazine*, PC MagNet has these special sections:

- Power Programming
- Languages
- Environments
- Spreadsheet Clinic
- Power User
- PC Lab Notes
- PC Tutor
- and more...

PC MagNet is your ideal platform for discussing what was in User-to-User or sharing your latest 1-2-3 macro. And no matter what language you program in – assembler, BASIC, C, or Pascal – PC MagNet is at your service.

And There Is More!

"Sit in on" important conferences with industry gurus, *PC Magazine* editors, and

Instant Access

PC product developers with PC MagNet's real-time Focus Group Facility.

Upload submissions to Connectivity Clinic, Spreadsheet Clinic, User-to-User, Power User, Languages, and PC Tutor.

React to anything you've read in *PC Magazine* by sending a letter to the editor.

C MagNet!

To PC Magazine's Universe

Contribute to the Download libraries.

Send electronic mail to and receive it from other *PC Magazine* readers.

Download the PC Labs Benchmark Series of hardware tests, as well as some of the most popular shareware.

Take Advantage Of This Outstanding New Service Today

PC MagNet opens an entire universe of information and advice, and your on-line time is only \$12.50 an hour for round-the-clock access. There are no monthly minimum charges, and you pay only for what you use.

One Call Gets You Started!

You don't need to be an expert at communications to take full advantage of PC MagNet's extraordinary benefits.

1. To subscribe, set your modem to: 300 or 1200 bps, 7 data bits, even parity, 1 stop bit and full duplex. Call one of the numbers listed:

Anaheim, CA	(714) 520-9724
Atlanta, GA	(404) 266-7014

Genealogy

(continued)

eration chart—complete with birth and death dates and places—on one 8½-by-11-inch page.

The program allows you to design your own number system for continuation charts, a plus any seasoned genealogist will appreciate.

Family Reunion also prints family group sheets on one page and allows names and addresses for two preparers—a nice touch when the preparer uses information for which another actually deserves credit. The female spouse can be put in the top position—the spot usually reserved for the husband. This is very useful for descendants of a single ancestor.

Another nice feature—full address and phone number fields for living relatives—will appeal to family reunion organizers. One of the program modules generates mailing labels straight from the family file.

Last but not least, *Family Reunion* does a nice job of handling multiple databases—an absolute must for a professional genealogist. One of the program modules allows you to switch to a different database without leaving the program.

Family Reunion enjoys an enthusiastic following despite its problems, thanks largely to its elegant printed output and its ability to handle multiple databases with ease.

FAMware should be shipping a faster version of *Family Reunion* by the time this issue hits the newsstands. The new version will be compiled with Microsoft's QuickBASIC 4.0, so the speed increase should be substantial.

List Price: *Family Reunion*, \$195.
Requires: 256K RAM, two disk drives, DOS 2.0 or later. Not copy protected. FAMware, 1580 E. Dawn Dr., Salt Lake City, UT 84121; (800) 327-9835.

CIRCLE 646 ON READER SERVICE CARD

Family Roots

Family Roots, from Quinsept, suffers from some of the same problems as *Family Reunion*, but to a lesser degree.

The documentation is bad, but it's sufficient if you're persistent. The program has different modules for each task, but they load much faster than do *Family Reunion's*. *Family Roots* also insists on a record-number system but, unlike *Family Reunion*, it provides a way to display names opposite record numbers on-screen.

Family Roots takes an odd but quick approach to entering data. Rather than presenting several screens of fields to fill in, the program prompts you to enter as many names as you wish. You then choose an option to begin setting the relationship hooks and filling in biographical information. You can add more names at any time.

Though unusual, this method of adding records seems more natural than trying to fill in all the blanks as you enter a person's data.

Family Roots also streamlines data entry by automating the hooking process a bit more than does *Family Reunion*. For instance, record numbers are needed for hooking, but you can use a name in lieu of a record number temporarily. The program will insert the appropriate record number if you later create a record with that name.

Like *Family Reunion*, *Family Roots* allocates a hefty amount of storage for each record. But, in an innovative touch, *Family Roots* lets you take advantage of the unused space for adding miscellaneous notes or footnotes on family members. *Family Roots* also allows a great deal of flexibility in field entries. You enter as much information as you wish, as long as you don't go beyond the space allocated to that record. Birthplace, for instance, need not be entered in the standard City-County-State format. It could read, "In cab on way to hospital."

You can also print mailing labels from full addresses for living relatives.

Family Roots grudgingly prints standard-format ancestor charts, but it really shines when printing what it calls "free-form" charts. Free-form charts sport the same tree structure as ancestor charts but can show a great deal of information or practically no information for each person. Specifying name only, for instance, generates an extremely compact and convenient version of an ancestor chart.

The program recognizes only one database per installation, a limitation that shouldn't hinder hobbyists but will keep professionals away.

List Price: *Family Roots*, \$185.
Requires: 128K RAM, two disk drives (hard disk recommended). DOS 1.1 or later. Not copy protected. Quinsept Inc., P.O. Box 216, Lexington, MA 02173; (800) 637-7668.

CIRCLE 647 ON READER SERVICE CARD

Roots II

Roots II, from Commsort, deservedly ranks as the top-selling genealogy package. Of the packages that are reviewed

here, *Roots II* is the most elegant as well as the most professionally prepared.

The *Roots II* program is made up of one well-written executable file and a handful of overlays, so you don't waste time switching among executable modules.

Most important, the program avoids the use of numbers to identify records. Instead, *Roots* combines a nice range of speedy, on-screen searches with the ability to pick records from the screen.

You store up to 40 names at any time into a fetch table, part of which is always displayed at the bottom of the screen. You pick names from the table as you need them—to specify hooks, subjects of ancestor charts, and so on.

Roots II gives up a bit of the flexibility of the other two programs. Whereas the others let you establish parent and child hooks in each record, *Roots* allows only hooks to parents to be set from any record. And, since hooks are made by choosing from the fetch table, you'll have to leave the parent fields temporarily blank if you haven't entered records for the subject's parents.

Genealogy: Tapping the On-line Source

With modems becoming more common among all classes of PC users, genealogists are beginning to turn to several on-line services that are dedicated to putting genealogists in touch with each other.

Two such services—Genie's Genealogy RoundTable and CompuServe's Roots forum—offer not only areas where users post queries for information on certain family lines, but also on-line chatting, software free for the downloading, and useful bulletins concerning genealogy and genealogy societies.

Another service, the National Genealogy Conference, comprises an ever-growing number of local bulletin boards joined into a nationwide network, and it carries no usage fee. As in the aforementioned services, users are encouraged to leave queries and also to help other users when able.

At last count, over 100 local bulletin boards had joined in the fun, and the list is growing rapidly.

Commsort began the NGC after starting its own BBS. To find the number for the local NGC-participating BBS nearest you, call the Commsort BBS at (415) 967-6730 and download GBBS.TXT. —Mitt Jones

This can lead to substantial frustration if you're entering large lists of names. The program's speed and otherwise thoughtful design more than make up for this frustration, however.

For instance, nine flags attached to each record let you encode information of your own choosing into files. Flags or combinations of flags can be used to indicate information such as fraternal affiliations, hair color, cause of death, and the like.

A slew of error checks also aids in the data entry process. It "tsk-tsks" about "preemie" firstborn children—a cute way of telling you to check your marriage and birth dates—and points out ancestors who appear to have lived 147 years. *Roots II* also reuses names and locations, saving both disk storage and entry time. Once you've entered "Lyne New London CT," for instance, the program will automatically enter the entire line when you type "Ly" on subsequent entries.

Roots II also provides an abundance of on-screen capabilities that make maintaining and using the data much easier.

Searches by name, date, location, or certain flags yield on-screen lists in a flash. You can then add any of the subjects to the fetch table by pointing to the subject and hitting a key combination.

Excellent on-screen ancestor charts let you run up or down family lines, a big help in avoiding generation gaps. You can also run up and down miniature family group sheets on the screen to check connections.

Roots II will even calculate blood relationships between any two subjects, by either canon or civil law.

Roots does a nice job of compressing data files, allowing several thousand records to be stored on one floppy disk. It can also handle multiple databases, though you must exit the program to change your database. The program's printed re-

ports include everything you'd expect and then some. The family group sheet has loads of information on each person. Each group sheet stretches over several pages. Footnotes are available for referencing and documenting information.

Extremely clear ancestral charts detail five generations and include the spouse of the initial entry. The program automatically numbers and references continuation charts. Ahnentafel charts are surprisingly easy to read.

Family genealogists and historians who intend to publish their findings will like this program. It has the capability to produce camera-ready copy, including text produced on a word processor and linked to appropriate charts. Page numbers can be alternated for back-to-back printing, and you can index the entire print job.

Roots II wins hands down for ease of use and intelligent design. By the time this issue goes to press, *Roots III* should be available. Commsort was unable to ship the newest version to us in time for inclusion in this review. But if *Roots III* is any indication, *Roots III* should be a winner.

List Price: *Roots II*, \$195.

Requires: 64K RAM (320K recommended), DOS 1.1 or later. Not copy protected. Commsort, 2257 Old Middlefield Way, Mountain View, CA 94043; (800) 327-6687.

Stretch Away Your Stress with Pop-up Exercise

BY JENNIFER ZAINO

Your eyes fastened on the screen, you heed the commands to stretch out those hip, back,

The on-screen text instructions in *Computer Stretches* tell you how to move your body into stretching position. The dots in the drawing designate the areas where the stretch should be felt.

and neck muscles. Though this may sound like a scene from your favorite video workout, there's no Jane Fonda, Richard Simmons, or VCR in sight.

Instead, you're stretching to the beat of *Bob and Jean Anderson's Computer Stretches*, a memory-resident pop-up program from FB Systems that graphically depicts 14 stretching routines. The exercises are designed to relieve the stress, muscular tension, and pain that can result from sitting for many hours in front of your computer terminal. The \$49.95 program is based on Bob Anderson's *Stretching* book (\$9.95 from Shelter Publications, Bolinas, California).

You can keep to a daily stretching regimen by defining up to four timers that start *Computer Stretches* automatically throughout the day. If it pops up at an inconvenient time, you can select the Quit option and you'll be bounced right back to your application.

You have the option of choosing A-, B-, or C-level stretches. As you move to the more-advanced levels, more stretches are added, and the amount of time allocated for some of the stretches increases. A beep, which you can turn off, signals when the stretches will begin and end.

Even in EGA mode, *Computer Stretches's* graphics are static and bland. A program of this type could really benefit

from even minimal animation to illustrate how to move your body into stretching position. Instead, you have to rely on the manual or the on-screen text instructions to learn how to maneuver your body into the proper position. The parts of the body where the stretch should be felt are marked off with dots in the drawings.

Though *Computer Stretches* did not have any conflicts with memory-resident programs like *SideKick* and *Tornado Notes*, we found that it did cause *XyWrite* to malfunction on three different machines. The company was unable to provide a solution to this problem.

Stretching at regular intervals undoubtedly relieves the strains and pains associated with computer work. And *Computer Stretches's* handy user-definable timers make it a valuable program for those who need to be prompted to keep to a daily stretching routine. However, the program's amateur graphics show that FB Systems settled for something less than a high-energy, high-impact stretching session.

List Price: *Bob and Jean Anderson's Computer Stretches*, \$49.95. **Requires:** 256K RAM, hard disk, graphics adapter, DOS 2.0 or later. Not copy protected. FB Systems Inc., 23524 St. Andrews Ct., Auburn, CA 95603; (916) 268-1122.

GENEALOGY

Exploring Your Roots With PC-Based Genealogy Software Programs

BY DIANA ISENBRING
AND MITT JONES

Whether you're looking for a sense of place in the world or a legacy of fame, chances are you've at least thought about taking the plunge into genealogy. It's unlikely your search will turn up a claim to the Hughes estate, but a well-done search will undoubtedly turn up enough interesting ancestors to make the effort worthwhile.

Genealogy programs are essentially highly specialized database management programs. Unlike your typical database, however, each record in a genealogical database is "hooked" to at least one other record and often many. For instance, a record for a mother of seven children requires hooks not only to the records of her seven children but also to those of her husband and parents.

This highly specialized and intricate structure makes genealogy packages somewhat more complex than a typical database program. It also creates con-

cerns for users of these programs. Setting the hooks, or relationships, among family members can become somewhat of a chore. How each program handles data entry, record searches, and hooks becomes extremely important.

The other major area of concern when shopping for a genealogy package should be the range and quality of the reports the package generates, since good-looking output is probably what you're after in the first place.

Genealogists typically depend on three forms of charts. The ancestor or pedigree chart is what laymen call a family tree. An ahnentafel chart compresses the information in an ancestor chart by removing the branches, making it tough to read but mercifully compact. Finally, a family group sheet shows only the members of one nuclear family—mother, father, and their offspring.

With these features in mind, we rounded up three of the more powerful and commonly used genealogy packages for the PC. Each package takes a different approach to entering and maintaining the data. Each also offers a feature or two that the other programs don't.

Family Reunion

Family Reunion, from FAMware, offers a handful of useful features, but the program is dif-

PAF Puts You in Touch with Your Roots

No roundup of genealogy packages would be complete without at least a mention of *Personal Ancestry File* (see *After Hours*, *PC Magazine*, December 8, 1987). *PAF*, as the program is known in genealogy circles, is a basic but excellent genealogy program designed and sold by the Church of Jesus Christ of Latter-day Saints.

With an estimated 40,000 users, the program boasts the largest user base of any genealogy package for the PC. That's partly because of its price—only \$35—but also because of its competence.

PAF won't wow you with a mélange of eye-popping features or fancy output, but it handles basic text entry and output quite nicely.

Should you outgrow its capabilities somewhere down the road, you'll be able to export your data to *Roots II* or *Family Roots* with little trouble. Each offers, at little or no charge, a utility that translates *PAF* files into its own format.

To obtain a copy of *PAF*, call or write: Distribution Center, 1989 W. 1700, South Salt Lake City, UT 84104; (800) 247-3892, ext. 5274; (801) 531-2584. —Mitt Jones

ficult to install and even more difficult to learn, owing in part to the poor quality of its documentation.

The program's slowness ranks among its biggest problems. Written in BASIC and compiled with IBM's BASIC Compiler, it comprises some 24 separate routines you access via a central menu. Count patience among your virtues if you're not beating your keyboard by the time the program moves from one module to another.

For instance, exiting from the Data Entry module to the main menu took about 15 seconds on my XT compatible. Moving into the Pedigree Print module from there took another 15 seconds.

The program's number-oriented record scheme also contributes to the frustration. All modules make you specify record ID numbers for the records you wish to access or search.

To add insult to injury, you can't even browse through the records that are on the screen to find the ID number for the record you're hunting. Instead, *Family Reunion* allows you to print only an alphabetized index that matches ID number to name. It's a workable but none-

theless irksome solution.

You set relationship hooks when adding or editing an entry by inserting record numbers in the appropriate field. The data entry screen lists several offspring fields for each person, for instance. You enter the record ID for each child into one of the fields. Again, this requires that you know the record number instead of the name.

Mercifully, once you put a child in a parent's record, the program will automatically put the parent's record in the child's.

When you add a record, the program takes you through several screens packed with a variety of fields.

This seems at first to be an advantage, since you're likely to find all the fields you need. Whether used or not, however, these fields occupy precious space on your disk. For large databases, the program's space-hogging nature could definitely be a problem.

On the upside, *Family Reunion* produces one of the most elegant computerized six-generation ancestor charts you'll find anywhere. We were able to print a fairly complete six-gen-

(continues)

Up to 40 names at a time can be stored in the Roots II fetch table, which is always displayed at the bottom of the screen. You can easily pick names from the table as you need them.

GAMES

Hit the Hustings, Shake Some Hands, And You Could Be President

BY STEPHANIE IZAREK

If you think Gary Hart had a scandalous campaign, wait until you enter your bid for the presidency in Front Runner Software's new presidential election game, *Campaign Promises*. Tangled affairs, widespread rumors, bribery, sex scandals, and so-called mishaps run rampant in this game, just as they do in a real presidential election.

Test your political prowess and strategic planning against your friends in an exciting race for the ultimate title, the height of bossdom—the presidency. By winning the most electoral votes in each state and by showing no mercy, you will be well on your way to the White House.

There are a total of 538 electoral votes in 51 possible elections. Each of the 51 elections is called separately, and the electoral votes per state equal the number of congressional representatives plus the number of

senators. Like a real presidential election, a simple majority is all that is required to win.

The individual elections are won by the Popular vote, which is the summation of the results of the following Vote categories: Campaign Promise Votes, Campaign Organization Votes, Advertising Votes, and Just Plain Luck Votes.

By using the colorful main menu, you strategically select your priority areas. Because Promise Votes often win elections, it is important to have an abundance. You begin the game with three initial promises, chosen from a list of 20, that represent your main concerns and, hopefully, those of the voters. During each election, three promises are randomly chosen by the computer to represent the voters' concerns and are then compared with yours. The matches increase the potential Promise Votes you can earn.

By using the Buy Promises option or by landing on the Promise location during your campaign turn, promises can be purchased at a price randomly selected by the computer, ranging from \$5,000 to \$50,000.

Don't get sidetracked and spend all of your funds on promises. You'll need your funds to gain votes in the other important categories. You need to set up Organizations in each state to generate more funds. The earlier you establish them, the longer they exist and, therefore, accumulate more money and votes.

Similarly, your Advertising Campaign requires money. Un-

fortunately, the general rule here is that whoever spends the most money in advertising wins the most Advertising Votes. (Sounds true to life, doesn't it?)

It's important to be frugal with your funds, because if you end up with a negative balance, you will be ineligible to hold an election in the state of your choice.

Basically, the name of the game is to have a well-thought-out strategy, use your wit, and always pay attention to the campaign moves the other candidates are making. In political warfare no one can be trusted—especially since *Campaign Promises* includes a nasty option called Dirty Tricks. For a cost, randomly determined, of between \$5,000 and \$25,000,

are also provided with an on-screen tutorial and a well-organized manual.

The screen constantly displays flashing words and prompts that can be distracting and annoying. Front Runner also claims that *Campaign Promises* will work effectively on monochrome monitors. This is only partially true. The game will run on a monochrome monitor, but the states and the location board are all color coded. Unless you sit down and memorize the coding system or constantly refer to the manual, the game will become confusing.

Overall, Front Runner incorporates the major concepts of a presidential election and the opportunity to see how deceitful you can be in a creative and

Ralph Krandon for President? As long as he's got enough money to launch his careful advertising campaign, he could win the election on *Campaign Promises*.

you can sabotage an opponent's campaign. You can inform the press of unethical contributions, gift improprieties, or marital problems. Or how about having your opponent lose his hairpiece during a key speech? The dirty tricks are handled covertly by your campaign staff and can pop up at any time during the candidate's turn.

Campaign Promises is an exciting and competitive game that displays colorful screens and an easy-to-use menu. You

can challenge a game. So, if you think that your campaigning skills are first-rate and that you can do it better than Ronnie, *Campaign Promises* gives you the chance to prove it.

List Price: *Campaign Promises*, \$32.95. **Requires:** 256K RAM, CGA or EGA, DOS 2.0 or later. Not copy protected. Front Runner Software, P.O. Box 435, Collinsville, CT 06022; (203) 233-3144.
